

MC100EL90

-3.3 V / -5V Triple ECL Input to PECL Output Translator

Description

The MC100EL90 is a triple ECL to PECL translator. The device receives either -3.3 V or -5 V differential ECL signals, determined by the V_{EE} supply level, and translates them to standard +5 V differential PECL output signals.

To accomplish the level translation, the EL90 requires three power rails. The V_{CC} supply should be connected to the positive supply, and the V_{EE} pin should be connected to the negative power supply. The GND pins, as expected, are connected to the system ground plane. Both V_{EE} and V_{CC} should be bypassed to ground via 0.01 μ F capacitors.

Under open input conditions, the \bar{D} input will be biased at $V_{EE}/2$ and the D input will be pulled to V_{EE} . This condition will force the Q output to a LOW, ensuring stability.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.

The 100 Series Contains Temperature Compensation

Features

- 500 ps Propagation Delays
- Operating Range:
 - ♦ V_{CC} = 4.75 V to 5.25 V
 - ♦ V_{EE} = -3.0 V to -5.5 V; GND = 0 V
- Q Output will Default LOW with Inputs Open or at V_{EE}
- Internal Input Pulldown Resistors
- ESD Protection:
 - ♦ > 2 kV Human Body Model
 - ♦ > 200 V Machine Model
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- Moisture Sensitivity: Level 3 (Pb-Free)
(For Additional Information, see Application Note [AND8003/D](#))
- Flammability Rating: UL 94 V-0 @ 1.125 in, Oxygen Index: 28 to 34
- Transistor Count = 261 Devices
- This Device is Pb-Free, Halogen Free and is RoHS Compliant

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

- Output parameters vary 1:1 with V_{CC} . V_{CC} can vary $\pm 0.5 \text{ V}$.
- Outputs are terminated through a 50Ω resistor to $V_{CC} - 2.0 \text{ V}$.

Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Skews are valid across specified voltage range, part-to-part skew is for a given temperature.
2. Duty cycle skew is the difference between a TPLH and TPHL propagation delay through a device.
3. $V_{PP}(\text{min})$ is the minimum input swing for which AC parameters are guaranteed. The device has a DC gain of ≈ 40 .
