2.5-V PHASE-LOCK LOOP CLOCK DRIVER

SCAS660A – SEPTEMBER 2001 – REVISED DECEMBER 2002

- Phase-Lock Loop Clock Driver for Double Data-Rate Synchronous DRAM Applications
- Spread Spectrum Clock Compatible
- Operating Frequency: 60 MHz to 180 MHz
- Low Jitter (cyc–cyc): ± 50 ps
- Distributes One Differential Clock Input to Four Differential Clock Outputs
- Enters Low Power Mode and Three-State Outputs When Input CLK Signal Is Less Than 20 MHz or PWRDWN Is Low
- Operates From Dual 2.5-V Supplies
- 28-Pin TSSOP Package
- Consumes < 200- μ A Quiescent Current
- External Feedback PIN (FBIN, $\overline{\text{FBIN}}$) Are Used to Synchronize the Outputs to the Input Clocks

PW PACKAGE
(TOP VIEW)

description

The CDCV855 is a high-performance, low-skew, low-jitter zero delay buffer that distributes a differential clock input pair (CLK, $\overline{\text{CLK}}$) to four differential pairs of clock outputs ($\text{Y}[0:3]$, $\overline{\text{Y}}[0:3]$) and one differential pair of feedback clock outputs (FBOUT, $\overline{\text{FBOUT}}$). When $\overline{\text{PWRDWN}}$ is high, the outputs switch in phase and frequency with CLK. When $\overline{\text{PWRDWN}}$ is low, all outputs are disabled to a high-impedance state (3-state), and the PLL is shut down (low-power mode). The device also enters this low-power mode when the input frequency falls below a suggested detection frequency that is below 20 MHz (typical 10 MHz). An input frequency detection circuit detects the low-frequency condition and after applying a >20-MHz input signal this detection circuit turns on the PLL again and enables the outputs.

When AV_{DD} is tied to GND, the PLL is turned off and bypassed for test purposes. The CDCV855 is also able to track spread spectrum clocking for reduced EMI.

Since the CDCV855 is based on PLL circuitry, it requires a stabilization time to achieve phase-lock of the PLL. This stabilization time is required following power up. The CDCV855 is characterized for both commercial and industrial temperature ranges.

AVAILABLE OPTIONS

T_A	PACKAGED DEVICES
	TSSOP (PW)
0°C to 70°C	CDCV855PW
–40°C to 85°C	CDCV855IPW

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
AGND	10		Ground for 2.5-V analog supply
AVDD	9		2.5-V analog supply
CLK, CLK	6, 7	I	Differential clock input
FBIN, FBIN	23, 22	I	Feedback differential clock input
FBOUT, FBOUT	19, 20	O	Feedback differential clock output
GND	1, 5, 14, 15, 28		Ground
PWRDWN	24	I	Control input to turn device in the power-down mode
VDDQ	4, 8, 11, 18, 21, 25		2.5-V supply
Y[0:3]	3, 12, 17, 26	O	Buffered output copies of input clock, CLK
Y[0:3]	2, 13, 16, 27	O	Buffered output copies of input clock, CLK

absolute maximum ratings over operating free-air temperature (unless otherwise noted)[†]

Supply voltage range, V_{DDQ} , AV_{DD}	–0.5 V to 3.6 V
Input voltage range, V_I (see Notes 1 and 2)	–0.5 V to $V_{DDQ} + 0.5$ V
Output voltage range, V_O (see Notes 1 and 2)	–0.5 V to $V_{DDQ} + 0.5$ V
Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{DDQ}$)	±50 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{DDQ}$)	±50 mA
Continuous output current, I_O ($V_O = 0$ to V_{DDQ})	±50 mA
Continuous current to GND or V_{DDQ}	±100 mA
Package thermal impedance, θ_{JA} (see Note 3): PW package	105.8°C/W
Storage temperature range T_{stg}	–65°C to 150°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input and output negative voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
2. This value is limited to 3.6 V maximum.
3. The package thermal impedance is calculated in accordance with JESD 51.

recommended operating conditions (see Note 4)

		MIN	TYP	MAX	UNIT
Supply voltage, V_{DDQ} , AV_{DD}		2.3		2.7	V
Low-level input voltage, V_{IL}	CLK, \overline{CLK} , FBIN, \overline{FBIN}			$V_{DDQ}/2 - 0.18$	V
	PWRDWN	–0.3		0.7	
High-level input voltage, V_{IH}	CLK, \overline{CLK} , FBIN, \overline{FBIN}	$V_{DDQ}/2 + 0.18$			V
	PWRDWN	1.7		$V_{DDQ} + 0.3$	
DC input signal voltage (see Note 5)		–0.3		V_{DDQ}	V
Differential input signal voltage, V_{ID} (see Note 6)	CLK, FBIN	0.36		$V_{DDQ} + 0.6$	V
Output differential cross-voltage, $V_{O(X)}$ (see Note 7)		$V_{DDQ}/2 - 0.2$	$V_{DDQ}/2$	$V_{DDQ}/2 + 0.2$	V
Input differential pair cross-voltage, $V_{I(X)}$ (see Note 7)		$V_{DDQ}/2 - 0.2$		$V_{DDQ}/2 + 0.2$	V
High-level output current, I_{OH}				–12	mA
Low-level output current, I_{OL}				12	mA
Input slew rate, SR (see Figure 7)		1		4	V/ns
Operating free-air temperature, T_A	Commercial	0		85	°C
	Industrial	–40		85	

- NOTES: 4. Unused inputs must be held high or low to prevent them from floating.
5. DC input signal voltage specifies the allowable dc execution of differential input.
6. Differential input signal voltage specifies the differential voltage $|V_{TR} - V_{CP}|$ required for switching, where V_{TR} is the true input level and V_{CP} is the complementary input level.
7. Differential cross-point voltage is expected to track variations of V_{DDQ} and is the voltage at which the differential signals must be crossing.

2.5-V PHASE-LOCK LOOP CLOCK DRIVER

SCAS660A – SEPTEMBER 2001 – REVISED DECEMBER 2002

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER			TEST CONDITIONS		MIN	TYP†	MAX	UNIT
V _{IK}	Input voltage	All inputs	V _{DDQ} = 2.3 V, I _I = −18 mA				−1.2	V
V _{OH}	High-level output voltage		V _{DDQ} = min to max, I _{OH} = −1 mA		V _{DDQ} − 0.1			V
			V _{DDQ} = 2.3 V, I _{OH} = −12 mA		1.7			
V _{OL}	Low-level output voltage		V _{DDQ} = min to max, I _{OL} = 1 mA				0.1	V
			V _{DDQ} = 2.3 V, I _{OL} = 12 mA		0.6			
I _{OH}	High-level output current		V _{DDQ} = 2.3 V, V _O = 1 V		−18	−32		mA
I _{OL}	Low-level output current		V _{DDQ} = 2.3 V, V _O = 1.2 V		26	35		mA
V _{OD}	Output voltage swing		Differential outputs are terminated with 120 Ω		1.1		V _{DDQ} − 0.4	V
V _{OX}	Output differential cross-voltage‡				V _{DDQ} /2 − 0.2		V _{DDQ} /2	
I _I	Input current		V _{DDQ} = 2.7 V, V _I = 0 V to 2.7 V				±10	μA
I _{OZ}	High-impedance-state output current		V _{DDQ} = 2.7 V, V _O = V _{DDQ} or GND				±10	μA
I _{DD} (PD)	Power-down current on V _{DDQ} + AV _{DD}		CLK and $\overline{\text{CLK}}$ = 0 MHz; $\overline{\text{PWRDWN}}$ = Low; Σ of I _{DD} and A _I DD			100	200	μA
I _{DD}	Dynamic current on V _{DDQ}		Differential outputs are terminated with 120 Ω / CL = 14 pF	f _O = 167 MHz		150	180	mA
			Differential outputs are terminated with 120 Ω / CL = 0 pF			130	160	
A _I DD	Supply current on AV _{DD}		f _O = 167 MHz			8	10	mA
C _I	Input capacitance		V _{DDQ} = 2.5 V V _I = V _{DDQ} or GND		2	2.5	3	pF
C _O	Output capacitance		V _{DDQ} = 2.5 V V _O = V _{DDQ} or GND		2.5	3	3.5	pF

† All typical values are at respective nominal V_{DDQ}.

‡ Differential cross-point voltage is expected to track variation of V_{DDQ} and is the voltage at which the differential signals must be crossing.

timing requirements over recommended ranges of supply voltage and operating free-air temperature

PARAMETER		MIN	MAX	UNIT
f _{CLK}	Operating clock frequency	60	180	MHz
	Input clock duty cycle	40%	60%	
	Stabilization time (PLL mode)¶		10	μs
	Stabilization time (Bypass mode)§		30	ns

§ Recovery time required when the device goes from power-down mode into bypass mode (test mode with AV_{DD} at GND).

¶ Time required for the integrated PLL circuit to obtain phase lock of its feedback signal to its reference signal. For phase lock to be obtained, a fixed-frequency, fixed-phase reference signal must be present at CLK. Until phase lock is obtained, the specifications for propagation delay, skew, and jitter parameters given in the switching characteristics table are not applicable. This parameter does not apply for input modulation under SSC application.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate design.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
