Smart-UPS VT Features & Benefits

Protection

Frequency and voltage regulation	Gives higher application availability by correcting poor frequency and voltage conditions without using the battery.
Cold-start capable	Provides temporary battery power when the utility power is out.
Safety-agency approved	Ensures the product has been tested and approved to work safely with the connected service provider equipment and within the specified environment.

Sustainability

EU CoC for UPS	Ensures that UPSs sold in the EU are highly efficient
----------------	---

Manageability

Programmable frequency	Ensures compatibility with different input frequencies.
LED status indicators	Quickly understand unit and power status with visual indicators.
SmartSlot	Customize UPS capabilities with management cards.
Network manageable	Provides remote power management of the UPS over the network.
InfraStruXure Manager Compatible	Enables centralized management via the APC InfraStruXure Manager.
LCD display	Alpha-Numeric Display which displays system parameters and alarms.
Audible alarms	Provides notification of changing utility power and UPS power conditions

Total Cost of Ownership

Input power factor correction	Minimizes installation costs by enabling the use of smaller generators and cabling.
Intelligent battery management	Maximizes battery performance, life, and reliability through intelligent, precision charging.
Manual maintenance bypass	Reduces installation costs by eliminating the need for an external mechanical bypass.
Temperature-compensated battery charging	Prolongs battery life by regulating the charge voltage according to battery temperature.

Availability

Battery modules connected in parallel	Delivers higher availability through redundant batteries.
Generator compatible	Ensures clean, uninterrupted power to protected equipment when generator power is used.
Automatic internal bypass	Supplies utility power to the connected loads in the event of a UPS power overload or fault.
Dual mains input	Increases availability by allowing the UPS to be connected to two separate power sources.
Scalable runtime	Allows additional run time to be quickly added as needed.

Serviceability

Automatic self-test	Periodic battery self-test ensures early detection of a battery that needs to be replaced.
Battery replacement without tools	Enables fast battery replacement, lowering Mean Time to Repair (MTTR).
Modular design	Provides fast serviceability and reduced maintenance requirements via self-diagnosing, field-replaceable modules.
Shippable with modules installed	Enables pre-installation UPS staging and testing and faster installation.

Marketing Features

Input power factor correction	Minimizes installation costs by enabling the use of smaller generators and cabling.
Dual mains input	Increases availability by allowing the UPS to be connected to two separate power sources.
Scalable runtime	Allows additional run time to be quickly added as needed.
Hot-swappable batteries	Ensures clean, uninterrupted power to protected equipment while batteries are being replaced
Network manageable	Provides remote power management of the UPS over the network.

Manual maintenance bypass	Reduces installation costs by eliminating the need for an external mechanical bypass.
