DC-DC Converters
MI-J00

10 to 50 Watts

Features & Benefits

- Inputs:
  $28V_{DC}$ per MIL-STD-704D/E/F
  $155V_{DC}$ per MIL-STD-1399A
  $270V_{DC}$ per MIL-STD-704D/E/F
- Single output: 2 – $48V_{DC}$
- Up to 23W/in^3
- MIL-STD-810 environments
- Up to 90% efficiency
- Remote sense
- Current limit
- ZCS power architecture
- Low noise FM control
- Size: 2.28" x 2.4" x 0.5"
  (57,9 x 61,0 x 12,7mm)

Product Highlights

The MI-J00 family of DC-DC converters is designed for applications utilizing distributed power architectures. Based on Vicor's VI-200 / VI-J00 family of zero-current switching, component-level DC-DC converters, the MI-J00 family offers exceptional performance in terms of power density, efficiency, noise, ease of use, and reliability.

The MI-J00 family meets the steady-state input voltage requirements of MIL-STD-704D/E/F for the $28V_{DC}$ (MI-J2X) and $270V_{DC}$ input (MI-J6X). The $155V_{DC}$ input (MI-J5X) meets MIL-STD-1399A. When used with the MI-IAM input attenuator module, the 28V or 270V input MI-J00 converter meets the transient and spike requirements of MIL-STD-704, MIL STD-1275, and DO-160. Please refer to the MI-IAM data sheet for details.

The output voltage can be externally trimmed or programmed from 50% to 110% of nominal output. Current limiting, remote sense, and an inhibit pin all combine to offer a high degree of protection, versatility, and reliability for power systems.

Fully encapsulated in Vicor's industry standard package, the MI-J00 family meets MIL-STD-810 environmental testing requirements for humidity, fungus, salt-fog, explosive atmosphere, acceleration, vibration, and shock.

Packaging Options

Standard: Slotted baseplate

SlimMod: Flangeless baseplate, option suffix: - S
Example: MI - JXX - XX **- S**

FinMod: Finned heat sink, option suffix:
- F1, -F2, -F3 and - F4

Examples:
MI - JXX - XX **-F1**, 0.25" fins, longitudinal
MI - JXX - XX **-F2**, 0.50" fins, longitudinal
MI - JXX - XX **-F3**, 0.25" fins, transverse
MI - JXX - XX **-F4**, 0.50" fins, transverse

Output Connections and Considerations

The permissible load current[e] must never be exceeded during normal, abnormal or test conditions. Converters subject to dynamic loading exceeding 25% of rated current must be reviewed by Vicor Applications Engineering to ensure that the converter will operate properly.

Under dynamic load, light load, or no load conditions, the converter may emit audible noise. Converters that utilize remote sense may require compensation circuitry to offset the phase lag caused by the external output leads and load impedance. Remote Sense leads must be protected for conditions such as lead reversal, noise pickup, open circuit, or excessive output lead resistance between the sense point and the converters output terminals. For applications that may draw more than the rated current, a fast acting electronic circuit breaker must be utilized to protect the converter. Under no circumstance should the rated current be exceeded. Utilizing or testing of current limit or short circuit current will damage the converter. Ensure that the total output capacitance connected to the converter does not exceed the limits on Page 4.

[e] Permissible load current: $\frac{Nominal\ Power\ Rating}{Nominal\ V_{OUT}}$

Storage

Vicor products, when not installed in customer units, should be stored in ESD safe packaging in accordance with ANSI/ESD S20.20, "Protection of Electrical and Electronic Parts, Assemblies and Equipment" and should be maintained in a temperature controlled factory/warehouse environment not exposed to outside elements controlled between the temperature ranges of 15°C and 38°C. Humidity shall not be condensing, no minimum humidity when stored in an ESD compliant package.

Life Support Policy

VICOR'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE CHIEF EXECUTIVE OFFICER AND GENERAL COUNSEL OF VICOR CORPORATION. As used herein, life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness. Per Vicor Terms and Conditions of Sale, the user of Vicor products and components in life support applications assumes all risks of such use and indemnifies Vicor against all liability and damages.
