

WAGOframe is an FDT/DTM-based software used for parameterization, commissioning and diagnostics of field devices. DTM device drivers for the devices employed are required to use the WAGOframe FDT frame application. The WAGOframe FDT frame application provides a wizard, which simplifies the operation of components, such as WAGO JUMPFLEX DTMs. For example, this wizard guides the user through the different operating modes of DTM device drivers. Depending on the PC communication interface used, an appropriate communication cable including DTM is required.
