GENERAL PURPOSE LOW VOLTAGE COMPARATOR

Description

The LMV331/LMV393 series are low-voltage, (2.7V to 5.5V) single and dual comparators, which are designed to effectively reduce cost and space at low-voltage levels.

These devices offer specifications that meet or exceed the familiar LM331/LM393 devices operating with a lower supply voltage and consuming a far lower supply current.

The LMV331 is available in 5-Pin SOT353/SOT25 packages that reduce space on PC boards and portable electronic devices. LMV393 is available in industry standard SOP-8 and MSOP-8 packages.

Features

- Guaranteed 2.7V and 5.5V performance
- Operating temperature range (-40°C to +125°C)
- Low supply current 40 µA/comparator Typ
- Input Common Mode Voltage Range includes ground
- Open Collector Output for Maximums Flexibility
- SOT353, SOT25, MSOP-8, SO-8: Available in “Green” Molding Compound (No Br, Sb)
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. “Green” Device (Note 3)**

Pin Assignments

SO-8/MSOP-8

Applications

- Mobile Communications
- Battery Powered Devices
- Notebooks and PDA’s
- General Purpose Low-Voltage Applications
- General Purpose Portable Devices

Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
2. See http://www.diodes.com/quality/lead_free.html for more information about Diodes Incorporated’s definitions of Halogen- and Antimony-free, "Green" and Lead-free.
3. Halogen- and Antimony-free "Green” products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

Pin Descriptions

LMV331		
Pin Name	**Pin #**	**Function**
IN+	1	Non-Inverting Input
V_{EE}	2	Chip Supply Voltage(Negative)/GND
IN-	3	Inverting Input
OUT	4	Output
V_{CC}	5	Chip Supply Voltage(Positive)
LMV393		
1OUT	1	Channel 1 Output
1IN-	2	Channel 1 Inverting Input
1IN+	3	Channel 1 Non-inverting Input
V_{EE}	4	Chip Supply Voltage(Negative)/GND
2IN+	5	Channel 2 Non-inverting Input
2IN-	6	Channel 2 Inverting Input
2OUT	7	Channel 2 Output
V_{CC}	8	Chip Supply Voltage(Positive)

Absolute Maximum Ratings (Note 4) (@T_A = +25°C, unless otherwise specified.)

Symbol	Description		Rating	Unit
ESD HBM	Human Body Model ESD Protection		6.0	KV
ESD MM	Machine Model ESD Protection		200	V
V_{ID}	Differential Input Voltage		±Supply Voltage	V
V_{CC} -V_{EE}	Supply Voltage		5.5	V
θ_{JA}	Thermal Resistance Junction-to-Ambient	SOT353 (Note 5)	371	°C/W
		SOT25 (Note 5)	204	
		SO-8 (Note 5)	120	
		MSOP-8 (Note 5)	180	
T_{ST}	Storage Temperature		-65 to +150	°C
T_J	Maximum Junction Temperature		+150	°C

Notes:
4. Stresses greater than the 'Absolute Maximum Ratings' specified above, may cause permanent damage to the device. These are stress ratings only; functional operation of the device at these or any other conditions exceeding those indicated in this specification is not implied. Device reliability may be effected by exposure to absolute maximum rating conditions for extended periods of time.
5. All numbers are typical, and apply for packages soldered directly onto a PC board in still air.

Recommended Operating Conditions (@T_A = +25°C, unless otherwise specified.)

Symbol	Description	Rating	Unit
V_{CC} -V_{EE}	Supply Voltage	2.7 to 5.5	V
T_A	Operating Ambient Temperature Range	-40 to +125	°C

Notes: 6. Typical values represent the most likely parametric norm as determined at the time of characterization. Actual typical values may vary over time and will also depend on the application and configuration. The typical values are not tested and are not guaranteed on shipped production material.
7. All limits are guaranteed by testing or statistical analysis.

Application Information

Detailed Description

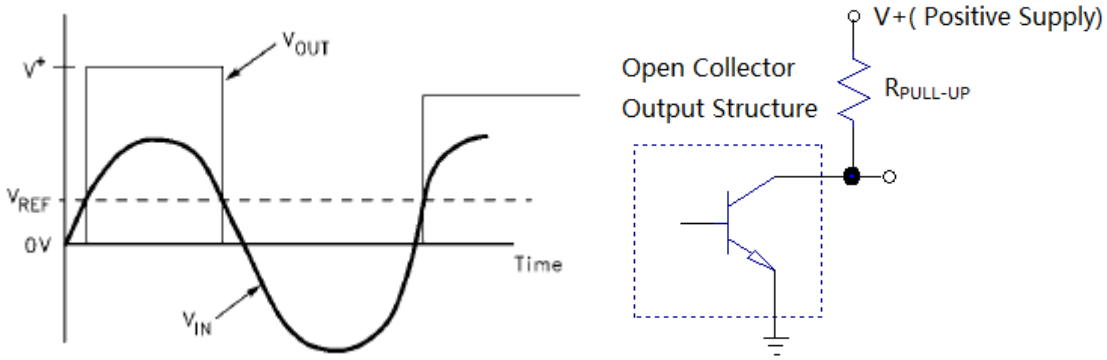
LMV331/LMV393 are low-voltage single/dual general- purpose comparators. They have a single supply operating voltage range from 2.7V to 5.5V; the common mode input voltage range extends from -0.1V below the negative supply to within 0.8V of the positive supply.

The LMV331/393 series is built using the BiCMOS process with bipolar input and output stages for improved noise performance. It is a cost-effective solution for portable consumer products where space, low voltage, low power and price are the primary specification in circuit design.

Basic Comparator

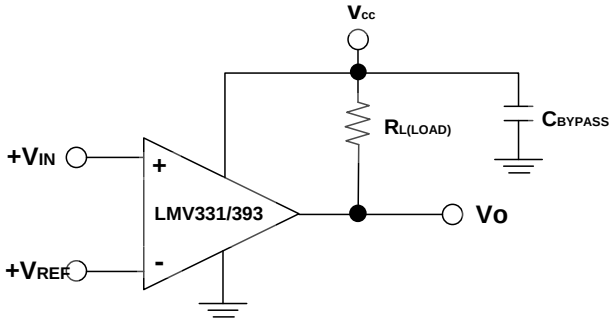
A basic comparator circuit is used for converting analog signal to digital output. The LMV331/393 has open-collector output structure, which required a pull-high resistor to positive supply voltage for the output to switch properly. When the internal output transistor is off, the output voltage will be pulled up to the external positive voltage.

The output pull- up resistor should be chosen high enough so as to avoid excessive power dissipation, yet low enough to supply enough drive to switch whatever load circuitry is used on the comparator output. On the LMV331/393 the pull-up resistor should range between 1KΩ to 10KΩ.

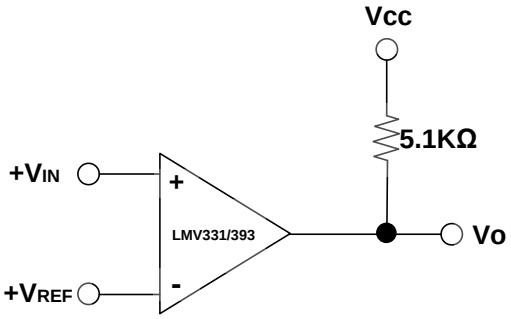


Power Supply Bypassing

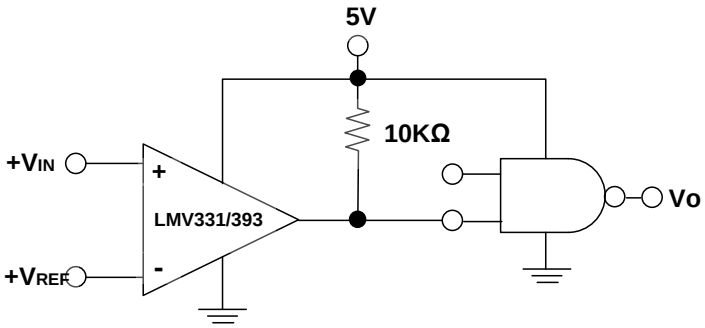
For better performance, power supply bypass capacitor is necessary. For a single-supply operation system, a minimum of 0.1µF bypass capacitor should be recommended to place as close as possible between V_{CC} pin and GND.



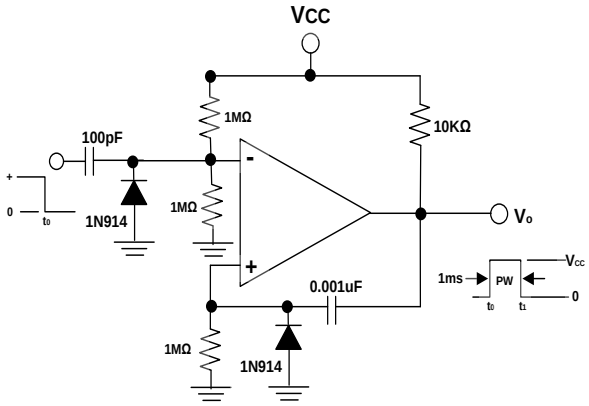
Typical Application Circuit



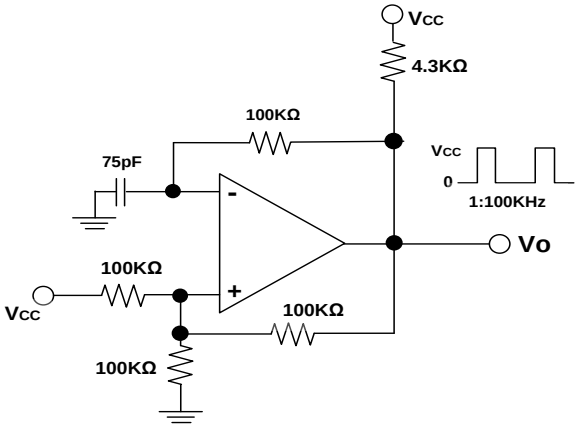
Basic Comparator



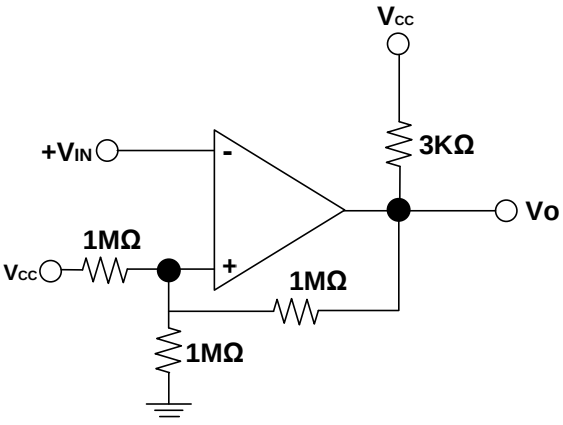
Driving CMOS/TTL



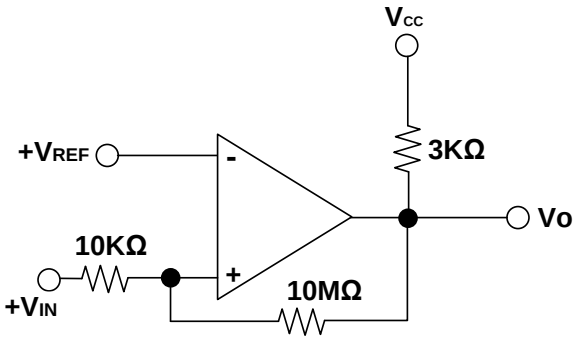
One-Shot Multivibrator



Squarewave Oscillator



Inverting Comparator with Hysteresis



Non-Inverting Comparator with Hysteresis

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or

2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
