Product Details

Description

The F2932EVBI is a fully populated evaluation board which allows the customer to easily evaluate the F2932 RF switch.

“Thru” calibration connectors are conveniently located on the eval board to simplify the calibration process prior to making any RF measurements. Each RF port (RF1 and RF2) can be connected to RFC by applying the correct control logic voltage to the VCTL and EN control pins as outlined in the F2932 datasheet.
