*Although the device is functionally IP65 compliant, excessive contamination and / or fluid build-up between the sounding element and the plastic enclosure may result in a reduction of performance. Depending on environment routine inspection / maintenance of the device may be recommended accordingly. It is also advised that after any cleaning process excessive water is removed from between the sounding element and the plastic enclosure e.g. by use of a clean air aerosol. Switches & terminal block are located on the rear surfaces. The AP must be mounted through the surface of a suitable IP 65 housing. The AF rear surface must be protected from water / dust ingress. The supply cable and tube must be protected from water and dust ingress.
