| STTN6050H-12M1Y |

### Product summary

| Product summary | |
| --- | --- |
| $I_{T(RMS)}$ | 60 A |
| $I_{OUT(AV)}$ | 75 A |
| $I_{IN\_AC(RMS)}$ | 85 A |
| $V_{DRM}/V_{RRM}$ | 1200 V |
| $V_{DSM}/V_{RSM}$ | 1400 V |
| $I_{GT}$ | 50 mA |
| $T_j$ | -40 to +150 °C |
## Features

- AEC-Q101 qualified
- 1200 V symmetrical blocking voltage
- High junction temperature: 150 °C
- High noise immunity, static dV/dt: 1000 V/μs
- Embed two TN6050HP-12 dies in series
- Module qualified according to AQG324 recommendation
- SMD with isolated top cooled tab
- 4000 V insulated tab-to-lead package
  - UL recognized, File E81734
- Terminal pins opposite to cooling side
  - Fully automatic PCB mounting to heat sink
- Large creepage distance to meet IEC 60664-1
  - 250 $V_{AC}$, material group 2, pollution degree 3
  - 600 $V_{AC}$, material group 2, pollution degree 2
- ECOPACK2 compliant component

## Applications

- Single and tri-phase controlled rectifier bridge
- AC phasing half bridge of a totem pole PFC
- On-board and stationary chargers
- AC / DC converter for motor drive, UPS and SMPS
- Output full wave DC current up to 75 $A_{AV}$
- AC Input converter current up to 85 $A_{RMS}$
- Solid-state relay in heating control, by pass switch and motor starter

## Description

The STTN6050H-12M1Y achieves a 1200 V 60 A full controlled SCR bridge leg in ACEPACK SMIT module, and it can control an AC current up to 85 $A_{RMS}$ when connected to an AC line network. Thus, it allows to design a single or three-phase AC / DC rectifier bridge, a phase recombination branch of a totem pole PFC up to 75 $A_{(AV)}$ output current, the AC phasing arm of a line inverter or even an back-to-back SCR based AC switch for a heating controller or the by pass relay of an UPS.

With its top cooling pad opposite to the printed circuit board this device allows the PCB-module-heat sink stack to be automatically assembled. This provides a low profile and compact converter in the field of on-board charger, charging station, motor drive, UPS and AC / DC power supplies.

Based on the ST high temperature automotive ASD technology, it offers higher specified noise immunity of 1000 V/μs at the 150 °C junction temperature $T_j$, and an over-voltage robustness $V_{DSM}$ up to 1400 V.

# 1 Characteristics

**Table 1. Absolute maximum ratings (limiting values, per single SCR)**

| Symbol | Parameter | | | Value | Unit |
|---|---|---|---|---|---|
| $I_{T(RMS)}$ | RMS on-state current, sine half wave | $T_C$ = 106 °C | | 60 | A |
| $I_{T(AV)}$ | Average on-state current, sine half wave | | | 38 | A |
| $I_{TSM}$ | Non repetitive surge peak on-state current, $V_R$ = 0 V, $I_G$ = 100 mA | $t_p$ = 8.3 ms | $T_j$ initial = 25 °C | 660 | A |
| | | $t_p$ = 10 ms | | 600 | |
| $I^2t$ | $I^2t$ value for fusing | $t_p$ = 10 ms | $T_j$ = 25 °C | 1800 | $A^2s$ |
| dI/dt | Critical rate of rise of on-state SCR current $I_G$ = 2 x $I_{GT}$ , tr ≤ 100 ns | f = 50 and 60 Hz | $T_j$ = 150 °C | 200 | A/µs |
| $V_{DRM}$ / $V_{RRM}$ | Repetitive off-state voltage | | $T_j$ = -40 °C to 150 °C | 1200 | V |
| $V_{DSM}$ / $V_{RSM}$ | Non repetitive surge peak off-state voltage | $t_p$ = 10 ms | $T_j$ = 25 °C | 1400 | V |
| $V_{GM}$ | Peak forward SCR gate voltage | $t_p$ = 20 µs | $T_j$ = 150 °C | 10 | V |
| $I_{GM}$ | Peak forward SCR gate current | $t_p$ = 20 µs | $T_j$ = 150 °C | 8 | A |
| $I_{GCM}$ | Peak cathode drive current, C1 and C2 pins | $t_p$ = 20 µs | $T_j$ = 150 °C | 8 | A |
| $V_{RGM}$ | Peak SCR gate voltage | | $T_j$ = 25 °C | 5 | V |
| $P_{G(AV)}$ | Average SCR gate power dissipation | | $T_j$ = 150 °C | 1 | W |
| $T_{stg}$ | Storage junction temperature range | | | -40 to +150 | °C |
| $T_j$ | Operating junction temperature range | | | -40 to +150 | °C |
| $V_{INS}$ | RMS tab-to-pin lead insulation voltage, 1 minute | | | 4 | kV |

**Table 2. SCR electrical characteristics, per single SCR**

| Symbol | Test Conditions | | | Value | Unit |
|---|---|---|---|---|---|
| **SCR triggering characteristics** | | | | | |
| $I_{GT}$ | $V_D$ = 12 V, $R_L$ = 33 Ω | $T_j$ = 25 °C | Min. | 10 | mA |
| | | | Max. | 50 | |
| $V_{GT}$ | $V_D$ = 12 V, $R_L$ = 33 Ω | $T_j$ = 25 °C | Max. | 1.3 | V |
| $V_{GD}$ | $V_D$ = 2/3 $V_{DRM}$, $R_L$ = 3.3 kΩ | $T_j$ = 150 °C | Min. | 0.2 | V |
| $I_H$ | $I_T$ = 500 mA, gate open | $T_j$ = 25 °C | Max. | 100 | mA |
| $I_L$ | $I_G$ = 1.2 x $I_{GT}$ | $T_j$ = 25 °C | Max. | 125 | mA |
| **SCR dynamic characteristics** | | | | | |
| $t_{GT}$ | $I_T$ = 60 A , $V_D$ = 800 V, $I_G$ = 100 mA, $dI_G/dt$ = 0.2 A/µs | $T_j$ = 25 °C | Typ. | 1 | µs |
| $t_Q$ | $I_T$ = 38 A, $V_D$ = 800 V, $dI_T/dt$ = 10 A/µs, $V_R$ = 75 V, $dV_D/dt$ = 20 V/µs, $t_p$ = 100 µs | $T_j$ = 150 °C | Typ. | 150 | µs |
| dV/dt | $V_D$ = 800 V, gate open | $T_j$ = 150 °C | Min. | 1000 | V/µs |
| **SCR static characteristics** | | | | | |
| $V_{TM}$ | $I_{TM}$ = 60 A, $t_P$ = 380 µs | $T_j$ = 25 °C | Max. | 1.3 | V |
| | | $T_j$ = 150 °C | Max. | 1.3 | V |
| $V_{TOT}$ | SCR on-state threshold voltage | $T_j$ = 150 °C | Max. | 0.8 | V |
| $R_{DT}$ | SCR on-state dynamic resistance | $T_j$ = 150 °C | Max. | 7.35 | mΩ |
| $I_{DRM}/I_{RRM}$ | $V_D$ = $V_{DRM}$, $V_R$ = $V_{RRM}$ | $T_j$ = 25 °C | Max. | 5 | µA |
| | | $T_j$ = 150 °C | Max. | 7.5 | mA |
| $I_{DSM}/I_{RSM}$ | $V_D$ = $V_{DSM}$, $V_R$ = $V_{RSM}$ | $T_j$ = 25 °C | Max. | 10 | µA |
| **SCR losses evaluation** | | | | | |
| $P_{LT}$ | $V_{TOT}$ x $I_{T(AV)}$ + $R_{DT}$ x $I_{T(RMS)}^2$ | | | | W |

**Table 3. Thermal characteristics**

| Symbol | Parameter | | Value | Unit |

# 2 Application

## 2.1 Solid state Inrush current limitation (ICL) using STTN6050H-12M1Y

SCRs can be used in single and three phase applications as AC line polarity switches with an active current limitation at power up or line recovery.

For more information, refer to the application note:

- AN4606: Inrush-current limiter circuits (ICL) with Triacs and thyristors (SCR) and controlled bridge design tips.

Solid-state topologies with SCR allow the applications to easily comply to the following standard:

1. IEC61000-3-3 (voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current ≤ 16 A). the high current powered from the grid may lead to voltage fluctuations and drops due to the line impedance. Those mains voltage disturbances have an impact on any other equipment connected to the same circuit and cause undesired brightness variation of lamps or displays (commonly called flickering phenomenon).

2. IEC61000-4-11 (voltage dips, short interruptions, and voltage variations immunity tests) As any appliance connected to the mains can be subject to line voltage dips or interruptions, a high input current may occur when the line voltage suddenly comes back to its nominal value. This high current may damage the front-end circuit components and can trigger an AC fuse for example.

### 2.1.1 Single- phase applications

Figure 12 and Figure 13 define an active inrush current limiter in single-phase application with SCRs respectively in full wave SCRs bridge and in PFC totem pole bridgeless topology.

**Figure 12. Single-phase full wave SCRs bridge rectifier**

**Figure 13. Single-phase PFC Totem Pole bridgeless**

SCRs are controlled in phase angle to smoothly increase the PFC output capacitor voltage up to peak AC line voltage. The pre-charging peak current value is controlled by a microcontroller which smartly synchronize the SCRs gate driving signal angle step (referred as Δt in the Figure 14 here below). Limiting resistor like a negative temperature coefficient resistor (NTC) is no more needed.

**Figure 14. Inrush current controlled by SCRs principle**

### 2.1.2 Three-phase applications

Figure 15 and Figure 16 define an example of active inrush current limiter in three-phase application with SCR respectively in three-phase SCRs bridge rectifier and in three-phase VIENNA with 6 totem-pole SCRs topology.

**Figure 15. Three-phase SCRs bridge rectifier**

**Figure 16. Three-phase VIENNA with 6 Totem-Pole SCR**

## 2.2 Solid state relay (SSR) using STTN6050H-12M1Y

Solid-state relays (SSR) can perform same tasks as electromechanical relay. SSR provides a high reliability, a long service life, an electromagnetic interference reduction, a fast response. Moreover, the SSR has no moving parts to wear out or arcing contacts to deteriorate that are cause of failure about the electromechanical relay.

As defined by the Figure 17 , when a control current is applied to the input of the opto-TRIAC, the SCRs are turned on. When the control current is removed from the input of the opto-TRIAC, SCRs are turned off when the load current falls to the zero. Note the SSR can be used as contactor for 2-phase motor (see Figure 18) or as bypass relay (see Figure 19).
**Figure 17. SSR as AC load control**

**Figure 18. SSR as contactor**

**Figure 19. SSR as relay bypass**

## 2.3 Dissipated power and junction temperature calculation at steady state

### 2.3.1 Dissipated power definition

Dissipated power of the SCR is defined by the following equation with $V_{TOT}$ the SCR on-state threshold voltage, $R_{DT}$ the SCR on-state dynamic resistance, $I_{T(AV)}$ the SCR average current and $I_{T(RMS)}$ the SCR RMS current:

$$P_d = V_{TOT} \times I_{T(AV)} + R_{DT} \times I^2_{T(RMS)} \tag{1}$$

Table 4 gives the average and RMS current of SCR according to the topology defined in the previous section by considering the RMS current of the AC line $I_{L(RMS)}$ is a sinus waveform.

**Table 4. $I_{T(AV)}$ and $I_{T(RMS)}$ definition**

| Topology | Current definition | |
|---|---|---|
| Single-phase full wave SCRs bridge rectifier | $I_{T(AV)}$ | $I_{T(AV)} = \dfrac{\sqrt{2}}{\pi} \times I_{L(RMS)}$ |
| Single-phase PFC Totem Pole bridgeless | | |
| SSR | $I_{T(RMS)}$ | $I_{T(RMS)} = \dfrac{I_{L(RMS)}}{\sqrt{2}}$ |
| Three-phase VIENNA with 6 Totem-Pole SCRs | | |

## 2.3.2    Junction temperature definition

**Figure 20. Die assembly representation**

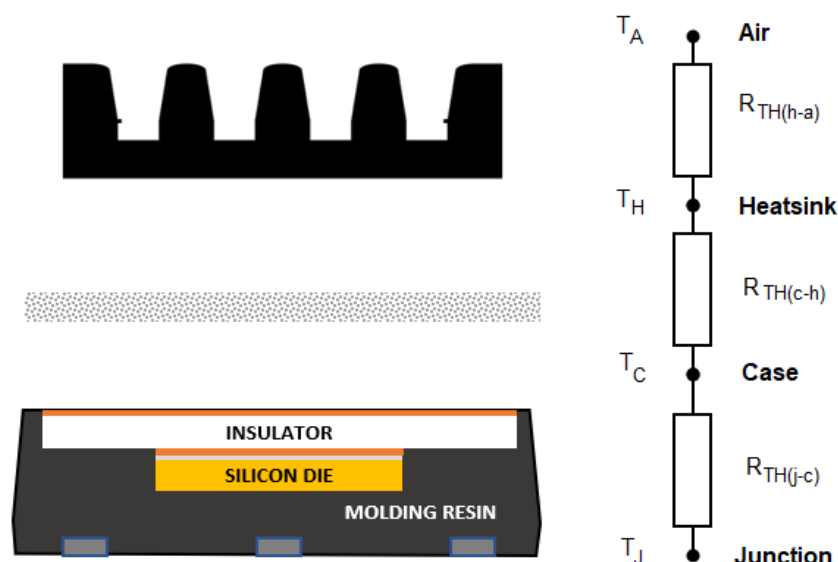

When Tc value is known, silicon junction temperature can be calculated as follows:

$$T_j = T_C + P_D \times R_{TH(j-c)}$$

Otherwise, starting from ambient temperature measurement, junction temperature can be calculated as follows:

$$T_j = T_A + P_D \times R_{TH(j-a)}$$

*Note:*      *$R_{th(j-c)}$ value is given in the datasheet above.*

with:

$$R_{TH(j-a)} = R_{TH(j-c)} + R_{TH(c-h)} + R_{TH(h-a)}$$

and where $R_{TH(c-h)}$ is the thermal interface resistance (grease or foil) and $R_{TH(h-a)}$ is the heatsink thermal resistance.

For more information about the thermal management and power dissipation calculation, refer to the application note:

- AN533: SCRs, TRIACs, and AC switches, thermal management precautions for handling and mounting

# 3 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.

## 3.1 ACEPACK SMIT package information
