### Product Features

- Use to charge and sync many cell phones
- Perfect replacement or spare cable
- Available in lengths up to 3m

### Product Description

Connect to cellphones, GPS systems, PDAs, and digital cameras by using the micro-USB connection on your computer or other USB device. The micro-USB connector is smaller and thinner than the previous USB Mini-b standard while offering better performance. Its small form factor is ideal for today's compact portable devices while easily transferring data or charging your device at a transfer speed up to 480 Mbps. This cable is compliant with USB 2.0 specifications.

Learn about the new USB 3.1 Specification and new USB Type-C Connector, or learn how the technology in this product offers features that are similar to the USB 3.1 specification but can be used with USB devices today.

### Product is ok...

I ordered 2 of them, one of the 2 that I recieved didn't work at all. I called up and it was replaced free of charge, The second works great. Recieved the replacement shortly afterworks. This works great as well. Beware if you are using this for a phone be sure to support the ferrite bead on the cable as well as your phone, because of the weight it pulls at the connector a little bit and drops the connection. Other then that great product.

This cable will operate to all standard Micro B functions. However I recommend contacting the Manufacturer of any device to make sure it does not fall out of their limitations.

Based on the other answers: With a cable of 24 AWG for power wires and 2.1Amps for current capacity and the given length of 3.2Ftx2, the equates to a voltage drop of around .35 V or close to 8% of the standard 5V lost in transmission when charging. (yes I have a Scosche revolt dual USB that puts out 2.1A @ 5V on BOTH USB ports) Do you have a larger diameter/gauge power charging cable available? 20AWG would be nice or 18AWG for a Longer cable! [Answer this Question](#)

Anonymous · 5 years ago

The cable could handle 2 Amps. But the more important question is does the USB charger that you are connecting the cable to support the 2.1A.

**What is the wire gauge of the internal wires? 26, 28, or? Does it have any type of isolation or shield? What is the max current rating? Thanks!**

**1**  
answer

Answer this Question

Anonymous · 5 years ago

The internal wires are 28AWG for data and 24AWG for power. It has an over all foil and a braid shield over the 4 conductors.
