SANMOTION

SANMOTION stepper and servo systems are continuously improved for exceptional performance and reliability, especially in multi-axis synchronous motion control applications.

ECO PRODUCTS

SANYO DENKI is working to develop products that incorporate the latest energy-saving technologies. Newly developed products are compared with commercially available and existing products, and those that satisfy the specified evaluation standards are certified as "eco-products" which reflect the fact they are environmentally-compatible products.

SANMOTION G

AC SERVO SYSTEMS

This is a brand new compact, lightweight, and energy-efficient AC servo system with evolved servo performance. This servo system provides high-speed and high-precision control of equipment, greatly improving the productivity and processing quality.

High-response control

With newly developed current control, speed frequency response has been increased to **3.5 kHz** (1.6 times higher than our conventional product). This helps improve the processing quality of machinery.

High-speed, high torque

The servo motor's maximum speed has been increased from 6000 min⁻¹ to **6500 min⁻¹** compared to our conventional product. Also, the new PWM control has increased the peak torque at high speeds by approximately **7%**, expanding the motor output range by up to **15%**. This enables the equipment to speed up without using a larger motor while achieving low cogging and low heat generation as well.

High-precision, stable positioning

This product comes with a **23-bit** encoder as standard (64 times that of our conventional model), and even an encoder with a maximum of **27-bit** high resolution can be selected as an option. The high-resolution encoder enables high-precision and stable positioning.

Conventional product
17-bit: 131,072 P/R

SANMOTION G
23-bit: 8,388,608 P/R
27-bit: 134,217,728 P/R

Compact size

Max.
22% Smaller
28% Lighter

Max.
5% Lighter

By optimizing the electromagnetic field and the brake structure, the motor length and mass have been reduced compared to our conventional product.

Motor length	Without brake :	12.2% shorter
	With brake :	11.9% shorter
Motor mass	Without brake :	10.5% lighter
	With brake :	11.4% lighter

The average value of all low- and medium-inertia servo motor models

With optimized thermal design and smaller components used, the servo amplifier has been made 5% lighter than the conventional product.

Compared to our conventional product, power consumption of servo motors and holding brakes has been reduced by up to 8.4% and 44%, respectively. The servo amplifier's power loss has been reduced by up to 26% in the main circuit thanks to the latest power device used and up to 16% in the control circuit thanks to a high-efficiency LSI (large-scale integrated) circuit.

Servo motor lineup

Input voltage	Motor size	Rated output [W]					
200 Vac	40 mmsq.	30	50	100	150		
	60 mmsq.			100		200	400 600
	80 mmsq.						750
	86 mmsq.						1k
	100 mmsq.						1.5k
	130 mmsq.						1.2k

Model numbering system for servo motor

Series	Servo motor	Motor type	Power supply	Flange size	Rated output	Max. speed	Holding brake	Encoder type	Encoder resolution	Shaft spec.
GA	M	2	A	4	003	F0	X	R	K	0

Motor type	2: Medium inertia	Rated output	003: 30 W	060: 600 W	Holding brake	X: No brake C: 24 VDC brake
Power supply	A: 200 VAC		005: 50 W	075: 750 W	Encoder type	R: Battery-less absolute encoder
Flange size	4: 40 mm 9: 86 mm		010: 100 W	100: 1.0 kW	Encoder resolution	K: 23 bit
	6: 60 mm A: 100 mm		015: 150 W	120: 1.2 kW	Shaft spec.	0: Circular (without key) without oil seal
	8: 80 mm B: 130 mm		020: 200 W	150: 1.5 kW		
			040: 400 W			

Model numbering system for servo amplifier

Series	Servo amplifier	Input power supply voltage	Amplifier capacity	Option 1	Interface	Motor encoder type	Option 2
GA	D	SA	01	A	H	2	4

Input power supply voltage	SA: 200 VAC	Option 1	A: With built-in regenerative resistor & With DB resistor
Amplifier capacity	01: 10 A 03: 30 A 02: 20 A 05: 50 A	Interface	A: Analog/pulse, sinking type general-purpose output H: EtherCAT
		Motor encoder type	2: Absolute encoder for X3, Incremental encoder for X4
		Option 2	2: STO function (without delay circuit), Tandem operation function 4: STO function (with delay circuit), Tandem operation function

SANMOTION Model No.PB

CLOSED LOOP STEPPING SYSTEMS

The closed loop stepping system SANMOTION Model No.PB combines the ease of use of stepping motors and the reliability of servo motors. Closed loop control based on feedback is made possible by the position-detecting encoder mounted on the stepping motor.

Interface

Network control with serial communication

Uses serial data transmission for speed, acceleration/deceleration speed, and displacement control

Control with pulse generator

Operates in response to the pulse input command from the host device

Stable stop

This system stops in a stable manner without the hunting (micro vibration) seen with servo motors thanks to holding torque, a feature of stepping motors.

Hunting

Push operation

Replacement of pneumatic systems is easy as pushing loads can be controlled. It is also suitable for mounters and testers, where driving in the z-axis is required.

Reduces positioning time

A high torque can be obtained in a low speed area, which makes this system suitable for applications where moving a short distance with short quick steps is required. (Short stroke, high hit rate) Motor torque can be utilized to the maximum when accelerating and decelerating, shortening positioning time.

■ Closed loop stepping motor lineup

Input voltage	Motor size	Max. stall torque [N·m]			
100 Vac 200 Vac	40 mmsq.	0.35			
	60 mmsq.		1.3	1.9	
	86 mmsq.				3.1 6.1

■ Model numbering system for closed loop stepping motor

Series	Motor size	Motor length	Power input	Option code	Encoder type	Specification identification		Standard identification
PBM	60	3	F	X	K	30	—	M

Power supply	F: AC input
Option code	X: Standard model (without option)
Encoder type	K: 16000 (4000x4) P/R with Z-phase output

Specification identification	30: Standard
Standard identification	M: UL and CE compliant

■ Model numbering system for closed loop stepping driver

Series	Power input	Motor excitation current	Interface type	Encoder type	Specification identification
PB4	A	002	R	3	00

Power input	A: AC
Motor excitation current	002: 2 A
Interface type	R: RS-485 + Parallel I/O P: Pulse train

Encoder type	3: Optical incremental, 16000 P/R
Specification identification	00: 100 VAC input 01: 200 VAC input

Output signal	Function	Encoder signal (A/B/Z), ALM, In-Position General-purpose output×2 (select from HOME END, Push END, ZONE, and input monitor)	
	Electrical specifications	Pulse signal output: Line driver 4000 P/R. Z-phase / phase origin signal is only output at 200 mm ⁻¹ or less. General-purpose output: Open collector 30 VDC, 15 mA or less	
Size	Dimensions	W42×H150×D120 mm	
	Mass	Approx. 0.65 kg	

SANMOTION F2

2-PHASE STEPPING SYSTEMS

The SANMOTION F2 is a 2-phase stepping system that provides precise positioning with easy control.

Full step angle

Stepping motors rotate precisely at a fixed angle (step angle) with each pulse the driver receives from a pulse generator. SANMOTION F2 motors typically have a full step angle of 1.8°.

Ease of use

Stepping motors use open-loop control without an encoder (position detection sensor), helping build simple and low-cost systems. Ease of use is a key point. In addition, they use holding force when stopped, and feature stable stopping without micro-vibrations.

Low vibration

This driver features approximately 10% less vibration compared with our conventional product. Also, a low-vibration mode function provides smooth driving, even with one-division (full-step) and two-division (half-step) coarse resolution settings. This allows vibrations to be suppressed without control system restrictions.

Different types of motors

A variety of motors for different applications such as the flat-shaped stepping motors that have industry-leading thinness and IP65-rated motors that have superior water and dust resistance and can be safely utilized in harsh or wet environments.

Flat-shaped motors

IP65-rated motors

Stepping motor lineup

Motor size	Step angle [deg/step]	Current [A/phase]	Holding torque [N·m]
14 mmsq. (NEMA 6)	1.8	0.3, 0.4	0.0065 — 0.01
28 mmsq. (NEMA 11)	1.8	1	0.07 — 0.145

100 VAC

Graph showing Torque (N·m) versus Speed (min⁻¹) for a motor. The curve illustrates the relationship between torque and speed, with a marked point for the pull-out torque at J_L. The x-axis is labeled with Speed (min⁻¹) and includes a scale for Pulse rate (kpulse/s) and a specific point 1 f_s.

Key parameters and labels:

- Y-axis: Torque (N·m)
- X-axis: Speed (min⁻¹)
- Label: Pull-out torque at J_L
- Label: 1 f_s
- Label: Pulse rate (kpulse/s)
- Equation: $J_L = 15.3 \times 10^{-4} \text{ kg} \cdot \text{m}^2$
- Text: f_s: Max. self-start frequency with no load

Technical drawing of the UL3398 22AWG cable assembly, showing front, side, and cross-section views with dimensions.

Front View (Left):

- Dimensions: 46 ± 0.2 (width), 0 to 9.525 ± 0.013 (height).
- Feature: 2-No. 2-56 UNC Tap Depth 5 Min.

Side View (Middle):

- Dimensions: 12.7 ± 1 (total length), 150 ± 1.5 (cable length), 1.5 ± 0.25 (cable diameter), 30 ± 0.5 (bushing length), 8 ± 0.5 (bushing diameter), 25 (bushing hole diameter), 23 max. (bushing hole offset), 305 min. (cable length to bushing), $R4$ min. (fillet radius), 0 to 12.7 ± 0.013 (height), $\phi 3.025 \pm 0.025$ (bushing hole diameter), 5 (bushing hole offset).
- Feature: GND Terminal M4x0.7x6L

Cross Section View (Right):

- Dimensions: 85.5 ± 0.5 (width), $4-69.6 \pm 0.25$ (cable diameter), 27 max. (cable hole diameter), $4-\phi 5.6 \pm 0.2$ (bushing hole diameter), 12 max. (bushing hole offset), 11.4 ± 0.15 (bushing hole diameter), 90° (bushing hole angle).
- Feature: Cross section S-S

2-PHASE STEPPING SYSTEMS

Driver controls and connectors

1. Operating current selection switch (RUN)

The value of the motor current can be set when operating.

Dial	0	1	2	3	4	5	6	7
Stepping motor current (A)	2.0	1.9	1.8	1.7	1.6	1.5	1.4	1.3
Dial	8	9	A	B	C	D	E	F
Stepping motor current (A)	1.2	1.1	1.0	0.9	0.8	0.7	0.6	0.5

- The factory setting is F (0.5 A).
Select the current after checking the rated current of the combination motor.

2. Function selection DIP switchpack

Select the function depending on your specification.

Factory settings

	OFF	ON	
EX1	☐	☐	Partition number: 8
EX2	☐	☐	
EX3	☐	☐	
F/R	☐	☐	Input method 2 (CW/CCW pulse input)
ACD1	☐	☐	Stopping current: 40% of driving current
ACD2	☐	☐	
LV	☐	☐	Micro step operation
EORG	☐	☐	Phase origin

1. Step angle select (EX1, EX2, EX3)

Select the partition number of the basic step angle.

EX1	EX2	EX3	Partition number
ON	ON	ON	1-division
OFF	ON	OFF	2-division
ON	OFF	OFF	4-division
OFF	OFF	OFF	8-division
OFF	OFF	ON	16-division

2. Input method select (F/R)

Select input pulse type.

F/R	Input pulse type
ON	1 input (CK, U/D)
OFF	2 input (CW, CCW)

3. Current selection when stopping (ACD1, ACD2)

Select the current value of the motor when stopping.

ACD2	ACD1	Current value of the motor
ON	ON	100% of driving current
ON	OFF	60% of driving current
OFF	ON	50% of driving current
OFF	OFF	40% of driving current

- Initial configuration of factory shipment is set to 40% of rated value. Driver and motor should be operated at around 50% of rated value to reduce heat.

4. Low-vibration mode select (LV)

Provides low-vibration, smooth operation even if resolution is coarse (1-division, 2-division, etc.).

LV	Operation
ON	Auto-micro function
OFF	Micro-step

5. Excitation select (EORG)

The excitation phase when the power supply is engaged is selected.

EORG	Original excitation phase
ON	Excitation phase at power shut off
OFF	Phase origin

- By turning on the EORG, the excitation phase during power OFF will be saved. Therefore, there will be no shaft displacement when turning the power ON.

3. LED for power supply monitor (POW)

Lit up when the main circuit power supply is connected.

4. LED for alarm display (ALM)

Lights in the following conditions:

- Motor cable is broken.
- Switching element in driver is faulty.
- The main circuit voltage is out of specifications range (19 VDC max.).

When "ALM" is displayed, the winding current of the stepping motor is cut off and it is in a "non-excitation" state. At the same time, an output signal (photocoupler ON) is transmitted from the alarm output terminal (AL) to an external source. When the alarm circuit is operating, this state is maintained until it is reset by switching on the power supply again. When an alarm condition has occurred, please take corrective actions to rectify the cause of the alarm before switching on the power supply again.

5. I/O signal terminal block (CN1)

Connect the I/O signal.

6. Motor terminal block (CN2)

Connect the motor's power line.

7. Power supply terminal block (CN3)

Connect the main circuit power supply.

Driver specifications

Driver model	BS1D200P10
Input source	24/36 VDC $\pm$ 10%
Source current	3 A
Operating environment	Ambient temperature: 0 to +50°C Humidity: 30 to 85% RH (non-condensing) Operating altitude: 1000 m max.
Command pulse input signal	Photocoupler input system, input resistance: 220 Ω input signal "H" level: 4.0 to 5.5 V, input signal "L" level: 0 to 0.5 V Maximum input frequency: 150 kpulse/s
Dimensions	W64×H56×D29 mm
Mass	Approx. 0.09 kg

SANMOTION C

MOTION CONTROLLER

Motion controllers that seamlessly integrate motion control, robot control, and sequence control. Structured programming with standardized PLC programming languages simplifies program development, and contributes significantly to making software assets shareable.

EtherCAT®

Controller with three control functions

The SANMOTION C has the three functions of motion control, robot control, and sequence control and makes it easy to build a variety of application systems.

EtherCAT interface

EtherCAT interface is provided as standard. With 100 Mbps high-speed and high-reliability communications, this fieldbus speeds up the system control capability and improves responsiveness. The takt time is significantly shortened.

Integrated development software SANMOTION C Software Tool

Software features various functions for system development.

- Programming tool
- Configuration tool
- Simple HMI (human machine interface) tool
- Analysis and diagnostic tool

Motion controller

System configuration

Note) All items highlighted in blue must be included to build a complete system.

Controller specifications

Model		SMC100-A	SMC100-B
Interface	EtherCAT (100 Mbps) master function		
	Ethernet (10/100/1000 Mbps) protocols (Modbus TCP, OPC-UA)		
	RS-485 (9600 to 115200 bps)		
	USB 2.0 (for data storage and wireless adapter)		
Digital I/O		Digital input: 16 points; rated input voltage: 24 VDC; positive/negative common input Digital output: 8 points; load voltage range: 19.2 to 30 VDC; max. load current: 0.5 A/point; sink output Min. cycle time: 0.5 msec	
Input power supply	Main power supply	Rated voltage: 24 VDC; load voltage range: 19.2 to 30 VDC; Rated current: 0.8 A	
	I/O power supply	Rated voltage: 24 VDC; load voltage range: 19.2 to 30 VDC; Rated current: 20 mA	
Power consumption		19.2 W	
Cooling method		Passive	
Dimensions, Mass		W55×H120×D110 mm, 300 g	
Max. no. of controllable axes		8	
Control functions		Sequence control Motion control (Electronic cam, electronic gear, linear interpolation, circular interpolation) Robot control (Cartesian coordinate, SCARA, and parallel link robots)	Sequence control Motion control (PTP control)
Control language		Programming languages conforming to international standard (IEC 61131-3) G-code (SMC100-A only)	
EtherNet/IP function	Communication	Scanner function: Network master [up to 4 units] / Adapter function: Network slave [up to 12 units] (Note: Cannot be used at the same time.) Please consult with the application engineer for additional information.	
	Conformance testing	ODVA conformance (Conformance test 16 passed)	
Software function supported		FoE, parameter transfer, security pass code, data monitor

1. U.S. Headquarters

Address: 468 Amapola Ave., Torrance, CA 90501
Phone: 800 905 7989
Fax: 310 212 6686

2. Silicon Valley Office

Address: 1500 Wyatt Dr. Suite 5, Santa Clara, CA 95054
Phone: 408 988 1700
Fax: 408 982 1700

3. Chicago Office

Address: 1340 Remington Road Suite E, Schaumburg, IL 60173
Phone: 224 353 6420
Fax: 224 353 6302

4. Detroit Office (Repair Service)

Address: 37511 Schoolcraft Road, Livonia, MI 48150
Phone: 734 525 1806
Fax: 734 525 3367

■ Precautions For Adoption

Failure to follow the precautions below may cause moderate injury and property damage, or in some circumstances, could lead to a serious accident. Always follow all listed precautions.

⚠ Cautions

- The products in this brochure are designed to be used with general industrial devices. Read the accompanying Instruction Manual carefully prior to using the product.
- Do not use this product in an environment where vibration is present, such as in moving vehicles or shipping vessels.
- Do not perform any retrofitting, re-engineering, or modification to the product.
- Please contact us beforehand if you intend to use this product in the following applications.
- Medical equipment that may have an effect on human life.
- Systems or equipment that may have a major impact on society or on the public.
- Special applications related to aviation and space, nuclear power, electric power, submarine repeaters, etc.
