

KIT_XMC_PLT2GO_XMC4200 Evaluation board guide

About this document

Scope and purpose

This document explains about the KIT_XMC_PLT2GO_XMC4200 Evaluation board: kit operation, out-of-the-box example and its operation, and the hardware details of the board.

Intended audience

This document is intended for all embedded developers using the KIT_XMC_PLT2GO_XMC4200 Evaluation board.

Evaluation board

This board is to be used during the design-in process for evaluating and measuring characteristic curves, and for checking datasheet specifications.

Note: *PCB and auxiliary circuits are NOT optimized for final customer design.*

Important notice

Important notice

“Evaluation Boards and Reference Boards” shall mean products embedded on a printed circuit board (PCB) for demonstration and/or evaluation purposes, which include, without limitation, demonstration, reference and evaluation boards, kits and design (collectively referred to as “Reference Board”).

Environmental conditions have been considered in the design of the Evaluation Boards and Reference Boards provided by Infineon Technologies. The design of the Evaluation Boards and Reference Boards has been tested by Infineon Technologies only as described in this document. The design is not qualified in terms of safety requirements, manufacturing and operation over the entire operating temperature range or lifetime.

The Evaluation Boards and Reference Boards provided by Infineon Technologies are subject to functional testing only under typical load conditions. Evaluation Boards and Reference Boards are not subject to the same procedures as regular products regarding returned material analysis (RMA), process change notification (PCN) and product discontinuation (PD).

Evaluation Boards and Reference Boards are not commercialized products, and are solely intended for evaluation and testing purposes. In particular, they shall not be used for reliability testing or production. The Evaluation Boards and Reference Boards may therefore not comply with CE or similar standards (including but not limited to the EMC Directive 2004/EC/108 and the EMC Act) and may not fulfill other requirements of the country in which they are operated by the customer. The customer shall ensure that all Evaluation Boards and Reference Boards will be handled in a way which is compliant with the relevant requirements and standards of the country in which they are operated.

The Evaluation Boards and Reference Boards as well as the information provided in this document are addressed only to qualified and skilled technical staff, for laboratory usage, and shall be used and managed according to the terms and conditions set forth in this document and in other related documentation supplied with the respective Evaluation Board or Reference Board.

It is the responsibility of the customer’s technical departments to evaluate the suitability of the Evaluation Boards and Reference Boards for the intended application, and to evaluate the completeness and correctness of the information provided in this document with respect to such application.

The customer is obliged to ensure that the use of the Evaluation Boards and Reference Boards does not cause any harm to persons or third party property.

The Evaluation Boards and Reference Boards and any information in this document is provided "as is" and Infineon Technologies disclaims any warranties, express or implied, including but not limited to warranties of non-infringement of third party rights and implied warranties of fitness for any purpose, or for merchantability.

Infineon Technologies shall not be responsible for any damages resulting from the use of the Evaluation Boards and Reference Boards and/or from any information provided in this document. The customer is obliged to defend, indemnify and hold Infineon Technologies harmless from and against any claims or damages arising out of or resulting from any use thereof.

Infineon Technologies reserves the right to modify this document and/or any information provided herein at any time without further notice.

Safety precautions

Safety precautions

Note: Please note the following warnings regarding the hazards associated with development systems.

Table 1 **Safety precautions**

	Warning: The DC link potential of this board is up to 1000 V or more. When measuring voltage waveforms by oscilloscope, high voltage differential probes must be used. Failure to do so may result in personal injury or death.
	Warning: The evaluation or reference board contains DC bus capacitors which take time to discharge after removal of the main supply. Before working on the drive system, wait five minutes for capacitors to discharge to safe voltage levels. Failure to do so may result in personal injury or death. Darkened display LEDs are not an indication that capacitors have discharged to safe voltage levels.
	Warning: The evaluation or reference board is connected to the grid input during testing. Hence, high-voltage differential probes must be used when measuring voltage waveforms by oscilloscope. Failure to do so may result in personal injury or death. Darkened display LEDs are not an indication that capacitors have discharged to safe voltage levels.
	Caution: Only personnel familiar with the drive, power electronics and associated machinery should plan, install, commission and subsequently service the system. Failure to comply may result in personal injury and/or equipment damage.
	Caution: The evaluation or reference board contains parts and assemblies sensitive to electrostatic discharge (ESD). Electrostatic control precautions are required when installing, testing, servicing or repairing the assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with electrostatic control procedures, refer to the applicable ESD protection handbooks and guidelines.

1 Introduction

1 Introduction

This document describes the features and hardware details of the XMC4200 Platform2Go Series-V1.1 equipped with an ARM® Cortex®-M4 based XMC™ Microcontroller from Infineon Technologies AG.

It can be used with a wide range of development tools including Infineon's free of charge Eclipse based IDE DAVE. The XMC4200 Platform2Go Series-V1.1 are designed to evaluate the capabilities of the XMC4200 Microcontroller. [Table 2](#) shows its specification.

Table 2 Kit Specification

Processor	Infineon's ARM® Cortex®-M4 XMC4200 Microcontroller in PG-LQFP-64-19 package (order number XMC4200-F64K256)
Flash Memory	256 kB Flash
Data Memory	40 kB
Dimensions	66 x 129 mm
Clock Crystals	12 MHz and 32.768 kHz crystal for CPU
Power	5V external powering - Micro-AB USB Connector interface or - On-Board Debugger USB interface
Connectors	- Arduino compatible connectors for 3.3V/5V - Two Shield2Go connectors - All relevant XMC™ pins available on expansion pads (X1, X2) - mikroBUS™ connector 9-Position D-Sub Connector - microUSB - Serial Wire Debug interface (2x5, 50 mil pitch) to XMC™ (on board debugger can be overridden by externally connected debugger)
Debugger	- On-Board J-Link Debug Probe via USB supporting - Serial Wire Debug (SWD) - UART-to-USB bridge (virtual COM)
Others	- On-board debug probe, based on XMC4200 Microcontroller - CAN transceiver connected to D-Sub Connector 1 user push-button, 1 user LED - Reset push-button - Potentiometer for variable analog input

The XMC4200 Platform2Go Series-V1.1 are available in four different assembly versions differentiating in features:

- XMC4200 Platform2Go for 3.3V Shields
- XMC4200 Platform2Go for 5V Shields
- XMC4200 Platform2Go Lite for 3.3V Shields
- XMC4200 Platform2Go Lite for 5V Shields

The **XMC4200 Platform2Go** features an Ethernet-enabled communication option. You can control the XMC4200 Platform2Go via the web browser on your PC.

Additional voltage level shifters and Arduino connection header on the XMC4200 Platform2Go allow the usage of **Arduino shields with 3.3V or 5V** logic level.

1 Introduction

The Ethernet-communication is not supported by the **XMC4200 Platform2Go Lite Kit**, because some components e.g. for Ethernet are not assembled.

All boards are marked with “Platform2Go XMC4200-V1.1” and can be distinguished by the assembled devices (see pictures in [Chapter 2](#)). These boards are neither cost nor size optimized and do not serve as a reference design.

1.1 Key Features

Table 3 summarizes the features of the different assembly versions of the XMC4200 Platform2Go Series-V1.1.

Table 3 Kit Features of Assembly Versions

Feature	XMC4200 Platform2Go 3.3V	XMC4200 Platform2Go 3.3V Lite	XMC4200 Platform2Go 5V	XMC4200 Platform2Go 5V Lite
XMC4200 Microcontroller	✓	✓	✓	✓
On-board Debug Probe with USB interface supporting SWD + SWO	✓	✓	✓	✓
Virtual COM Port via Debug Probe	✓	✓	✓	✓
1 x User Push-Button and 1 x User LED and 1 x Reset Push-Button 1 x Potentiometer	✓	✓	✓	✓
Voltage Regulator 5 V -> 3.3 V	✓	✓	✓	✓
USB (Micro USB Plug)	✓	✓	✓	✓
12 MHz Crystal	✓	✓	✓	✓
32.768 kHz RTC Crystal	✓	✓	✓	✓
Arduino compatible connector 3.3 V/5 V Arduino shields	✓	✓	✓	✓
0 Ohm Bridges Array for 3.3 V Arduino shields	✓	✓		
Voltage level shifter for 5 V Arduino			✓	✓
D-Sub Connector	✓		✓	
CAN Transceiver	✓		✓	

1 Introduction

1.2 Block Diagram

The block diagram in [Figure 1](#) shows the main components of the XMC4200 Platform2Go Series-V1.1 and their interconnections. There are following main building blocks:

- XMC4200 controller in a LQFP64 package
- On-board USB debug probe based on XMC4200 for SWD, SWV and Virtual COM Port support
- Two 40-pin header X1 and X2
- Connection Header for Arduino
- MikroBUS™ connector
- Two Infineon Shield2Go connectors (at the bottom of the board)
- Potentiometer (10kOhm)
- On-board power generation
- User Push-Button, User LED, Reset Push-Button
- Micro-AB USB Plug
- CAN Transceiver connected to 9-position D-Sub connector RS232

Figure 1 Block Diagram of the XMC4200 Platform2Go Series-V1.1

2 Hardware Description

2 Hardware Description

Figure 4 XMC4200 Platform2Go 3.3V Lite

2 Hardware Description

Figure 5 XMC4200 Platform2Go 5V Lite

2 Hardware Description

2.1 Power Supply

The XMC4200 Platform2Go Series-V1.1 must be supplied by an external 5 Volt DC power supply connected to any of the micro USB plugs (X100, X101). The green Power LED (VDD3.3) indicates the presence of the generated 3.3 V supply voltage.

On-board reverse current protection diodes will ensure safe operation in case power is provided through both USB plugs at the same time. These protection diodes allows to use the on-board debug probe connected with a PC/Notebook via X101 and a second host PC/Laptop connected with the XMC4200 via X100.

If the board is powered via a USB plug, it's not recommended to apply an additional 5 Volt power supply to one of the 5 Volt power pins (VDD5, 5 V) on the pin headers X1 or X2 or the Arduino Power header, because there is no protection against reverse current into the external power supply. These power pins can be used to power an external circuit. But care must be taken not to draw more current than USB can deliver. A PC as USB host typically can deliver up to 500 mA current. If higher currents are required and in order to avoid damages on the USB host the use of an external USB power supply unit which is able to deliver higher currents than 500 mA is strongly recommended.

Figure 6 Power Supply Concept

2 Hardware Description

2.2 Pin Header X1 and X2

The pin headers X1 and X2 can be used to extend the evaluation board or to perform measurements on the XMC4200. [Figure 7](#) shows the available GPIOs/signals at these pin headers. The pin table is also printed onto the bottom side of the PCB in bottom view.

Pin Header X2						Pin Header X1					
	GND	2	1	P0.7	CS_MB		RESET#	2	1	GND

(Top View)

*Note: These pins have solderable 0 Ohm (0805) resistor bridges. See section 2.4 and Table 4.

Figure 7 Signal mapping of the pin headers X1 and X2

2 Hardware Description

2.3 Pin Header for Microbus and Shield2Go Connector 1 and 2

The pin header for Microbus and Shield2Go Connector 1 and 2 can be used to extend the evaluation board or to perform measurements on the XMC4200. [Figure 8](#) shows the available signals at these pin headers. The **Shield2Go pin header is mounted on the bottom**. The pin table is also printed onto the top and bottom side of the PCB in each view.

Figure 8 Signal mapping of the pin headers for Microbus and Shield2Go Connector 1 and 2

2 Hardware Description

2.4 Solderable 0 Ohm Pin Bridges

The 0 Ohm (0805) pin bridges enable/disable the signal pins in [Table 4](#) (enabled by default).

To disable the signals, their resistor has to be removed. The XMC4200 pins are then usable for other usages.

Table 4 Signal mapping of the 0 Ohm Pin Bridges

Resistor	XMC Pin	Signal
R3	P2.0	CAN_TX
R4	P14.3	CAN_RX
R5	P1.15	BUTTON1
R7	P14.0	Potentiometer
R112	P0.1	LED1

2.5 Arduino Compatible Connector

The mapping of GPIOs and XMC pin functions to Arduino compatible functions can be found in [Figure 9](#). The Arduino compatible connector supports

- SPI interface (SPI_XXX)
- I2C interface (I2C_XXX)
- UART interface (UART_XXX)
- PWM signal outputs (PWM0-3)
- ADC input (ADC0-5)
- Interrupt input (INT0-1)

Figure 9 Mapping of Arduino Functions to XMC Pin Functions

2 Hardware Description

The **XMC4200 Platform2Go 5V** features bi-directional voltage level shifter and therefor supports 5 V Arduino shields. Jumper JP300 (IOREF) determines whether the Arduino shield is driven with 5 V or 3.3 V.

Analog input signals ADC0-5 are limited to 3.3 V input voltage. Primarily ADC0 to ADC3 should be used as analog input, because there is no additional circuit connected to these pins, whereas ADC4 and ADC5 have additional circuitry and require an input signal with lower input impedance. ADC0 is also connected to the Potentiometer for a variable value of the analog input (optional see [Table 6](#)).

Note: Parallel operation of I2C and ADC4/ADC5 is not possible, because they share the same Arduino pins.

2.6 User Push Buttons, Potentiometer and User LEDs

The XMC4200 Platform2Go Series-V1.1 provides one user push button, one LED and one Potentiometer. The port pins used can be found in [Table 5](#) and [Table 6](#).

Table 5 XMC4200 Pin Mapping for User LEDs

LED	XMC Pin	Resistor
LED1 ¹⁾	P0.1	R112 (680 Ohm)

1) The push button, the potentiometer and the LED can be disabled by removing their designator.

Table 6 XMC4200 Pin Mapping for User Push Buttons and Potentiometer

Button	XMC Pin	Resistor
BUTTON1 ¹⁾	P1.15	R5
Potentiometer ¹⁾	P14.0	R7

1) The push button, the potentiometer and the LED can be disabled by removing their designator.

Also see [Table 4](#).

Debugging and UART-to-USB Communication

The XMC4200 Platform2Go Series-V1.1 supports debugging via 2 different channels:

- On-board debug probe
- 10-pin Cortex™ Debug Connector (not assembled)

2.7 On-board Debug Probe

The on-board debug probe supports Serial Wire Debug (SWD) and UART communication. Both require the installation of Segger's J-Link Driver which is part of the DAVE™ installation. DAVE™ is a highly efficient development platform for the XMC microcontroller families to simplify and shorten SW development. It can be downloaded at www.infineon.com/dave. The latest Segger J-Link Driver can be downloaded at <http://www.segger.com/jlink-software.html>. [Table 7](#) shows the pin assignment of the XMC4200 used for debugging and UART communication.

2 Hardware Description

2.8 UART Communication for XMC4200

Table 7 XMC4200 Pins Mapping for Debugging and UART-Communication

Pin Function	Input/Output	XMC Pin
Data pin for Debugging via SWD	I/O	TMS
Clock pin for Debugging via SWD	O	TCK
Transmit pin for UART communication (PC_RX)	O	XMC4200 Debugger P1.5 (TXD_U0C0.DOUT0)
Receive pin for UART communication (PC_TX)	I	XMC4200 Debugger P1.4 (RXD_U0C0.DX0B)
Transmit pin for UART(UART_RX)	O	XMC4200 P2.15(RXD_U1C0.DX0C)
Receive pin for UART(UART_TX)	I	XMC4200 P2.14(TXD_U1C0.DOUT0)

2.9 Cortex™ Debug Connector (10-pin)

The 10-pin Cortex™ Debug Connector supports Serial Wire Debug (SWD) and Serial Wire Viewer (SWV). The pin assignment of the Cortex™ Debug Connector is shown in [Table 8](#).

Table 8 Pin Assignment of the Cortex™ Debug Connector (X102)

Pin No.	Signal Name	Description
1	VCC	+3.3 V
2	TMS	Serial Wire Data I/O
3	GND	Ground
4	TCK	Serial Wire Clock
5	GND	Ground
6	SWV	Serial Wire Viewer (Trace Data Out)
7	NC	Not connected
8	NC	Not connected
9	GND_Detect	Ground detect
10	RESET	Rest (active low)

2.10 Reset

The reset pin (PORST#) of the XMC4200 is a bi-directional pin in open drain mode. An internal pull-up resistor keeps the PORST# pin high during normal operation. A low level at this pin will force a hardware reset. In case of a MCU internal reset the PORST# pin will drive a low signal.

A reset signal can be issued by

- the on-board Reset Button (“RESET”)
- the on-board debug probe (IC101.47)
- the external debugger connected to the 10-pin Cortex™ Debug probe connector (X102)

2 Hardware Description

- the Arduino Power Header (X302.3, “RESET#”)
- the pin header X1 (X1.2, “RESET#”)

An XMC™ internal circuit always ensures a save Power-on-Reset. XMC™ does not require any additional external components to generate a reset signal during power-up.

2.11 CAN Transceiver

The XMC4200 Platform2Go provides a CAN interface via X3, a D-Sub DE-9, and the X1 and X2 connector. Infineon's high speed CAN transceiver (IFX1051LE) for industrial applications supports 3.3V I/O logic and is suitable for 12 V and 24 V bus systems with an excellent EMC performance. The CAN bus (signals CANH, CANL) are terminated by a 120 Ohm resistor and can provide 5V if R_{opt} is assembled with a 0 Ohm 0805 resistor (not assembled by default). The other CAN bus (CAN_TX, CAN_RX) is not terminated by a 120 Ohm and needs to be terminated externally. To use the CAN_TX/RX pins otherwise see also [Table 4](#).

Table 9 CAN Signals and XMC4200 Pin Mapping

Signal Name	Pin No. at Pin Header	XMC Pin, XMC Function
CANH	X3.7	-
CANL	X3.2	-
CAN_TX	X2.34	P2.0, CAN_TX
CAN_RX	X1.29	P14.0, CAN_RX
GND	X3.3, X3.6	-
VDD5	X3.9	-

2.12 Boot Option

During power-on-reset the XMC4200 latches the signal level at the pins TMS and TCK. Based on the logic levels latched at these pins after reset the XMC4200 starts booting in different modes. TMS and TCK pins are used for debugging and by default program execution is always starting from on-chip flash (normal mode).

The XMC4200 Platform2Go Series-V1.1 does not support the selection of the boot options by switches directly. In case of no external debug probe is used the boot mode can be influenced by applying 1 kOhm pull-up- or pull-down resistors to TMS and TCK pins. These pins are available at the 10-pin debug connector X102.

Table 10 Boot Mode Selection with external Pull Resistors

Logic Level at TMS during Reset	Logic Level at TCK during Reset	Boot Mode
High	Low	Normal Mode (boot from on-chip flash) (DEFAULT)
Low	Low	ASC BSL Mode (boot from UART)
High	High	BMI Customized Boot Mode
Low	High	CAN BSL Mode (boot from CAN)

3 Production Data

3 Production Data

This chapter covers schematics, board dimensions, component placement and the list of material.

Surface Mount Single Turn Trimmer, Model 23A - J Hook	R8 POTI P14.0	SMT	23AR10KLFTR/ 10kOhm	1	
Standard Thick Film Chip Resistor	R100, R101, R102, R103, R104, R105	0402/1005	100R	6	
Standard Thick Film Chip Resistor	R106, R125	0402/1005	1MEG	2	
Standard Thick Film Chip Resistor	R107, R108, R120 ¹⁾ , R121 ¹⁾	0402/1005	22R	4	
Standard Thick Film Chip Resistor, 0R/50V	R109	0402/1005	0R	1	
Standard Thick Film Chip Resistor, 0R/50V	R301, R303	0402/1005	0R	2	N

(table continues...)

3 Production Data

Table 11 (continued) List of Material

Description	Designator	Package Reference	Value	Quantity	Not fitted in ¹⁾
Standard Thick Film Chip Resistor	R111, R118, R122 ¹⁾	0402/1005	510R	3	
Standard Thick Film Chip Resistor	R112, R130	0603/1608	680R	2	
Standard Thick Film Chip Resistor	R114, R116, R119, R127	0402/1005	10k	4	
Standard Thick Film Chip Resistor	R300, R302	0402/1005	10k	2	A,C
Automotive Grade Thick Film Chip Resistor	R123, R124	0603/1608	680R	2	
Standard Thick Film Chip Resistor	R126	0402/1005	4.7k	1	
Standard Thick Film Chip Resistor	R_opt	0805/2012	0R	1	N
Chip Resistor Array, Temp Range (-55 to 125Å°C)	RA200, RA300		0R	2	B,D
Microcontroller Series for Industrial Application, Temp Range (-40° to 125°C)	U1	PG-TQFP-64-19	XMC4200-F64K256	1	
Shield2Go Connector	S2G-1P-1, S2G-1P-2		Two times 1x9 pins and 1x8 pins, 2.54mm pitch, female	1	N
2.54mm PC/104 Connector, Stackthrough	X1, X2		M20-6102045	2	N
R/A - 0.318 - Male Economy D-SUB	X3		182-009-113R561	1	C,D

3 Production Data

Table 11 (continued) List of Material

Description	Designator	Package Reference	Value	Quantity	Not fitted in ¹⁾
Micro-USB 2.0 Standard, Type AB, Bottom Mount, Shell SMT	X100, X101		ZX62-AB-5PA(31)	2	
THT Micro Header, 1.27mm pitch, 10 pin, vertical, double row, keying shroud , DAP	X102		FTSH-105-01-L-D-K	1	N
Through hole .025" SQ Post Header, 2.54mm pitch, 5 pin, vertical, single row	X103		TSW-105-07-L-S	1	N
Through hole .025" SQ Post Header, 2.54mm pitch, 6 pin, vertical, double row	X300		TSW-103-07-L-D	1	
Through hole .025" SQ Post Header, 2.54mm pitch, 6 pin, vertical, single row	X301		TSW-106-07-L-S	1	
Through hole .025" SQ Post Header, 2.54mm pitch, 8 pin, vertical, single row	X302		TSW-108-23-F-S	1	
Through hole .025" SQ Post Header, 2.54mm pitch, 8 pin, vertical, single row	X303		TSW-108-07-L-S	1	

(table continues...)

3 Production Data

Table 11 (continued) List of Material

Description	Designator	Package Reference	Value	Quantity	Not fitted in ¹⁾
Through hole .025" SQ Post Header, 2.54mm pitch, 10 pin, vertical, single row	X304		TSW-110-07-L-S	1	

1) Agenda:

A: XMC4200 Platform2Go for 3.3V Shields

B: XMC4200 Platform2Go for 5V Shields

C: XMC4200 Platform2Go Lite for 3.3V Shields

D: XMC4200 Platform2Go Lite for 5V Shields

N: Not assembled in all Versions
