This user guide supports the evaluation kit for the FL7733A. It should be used in conjunction with the FL7733A datasheet as well as Fairchild's application notes and technical support team. Please visit Fairchild's website at www.fairchildsemi.com.

1. Introduction

This document describes a solution for an universal AC input voltage LED driver using the FL7733A Primary-Side Regulation (PSR) single-stage controller. The input voltage range is $90 V_{RMS} \sim 277 V_{RMS}$ and there is one DC output with a constant current of 1.0 A at 50 V. This document contains a general description of the FL7733A, the power supply solution specification, schematic, bill of materials, and typical operating characteristics.

1.1. General Description of FL7733A

The FL7733A is an active Power Factor Correction (PFC) controller for use in single-stage flyback topology or buck-boost topology. Primary-side regulation and single-stage topology minimize cost by reducing external components such as the input bulk capacitor and secondary side feedback circuitry. To improve power factor and Total Harmonic Distortion (THD), constant on-time control is utilized with an internal error amplifier and a low bandwidth compensator. Precise constant-current control provides accurate output current, independent of input voltage and output voltage. Operating frequency is proportionally changed by the output voltage to guarantee Discontinuous Current Mode (DCM) operation, resulting in high efficiency and simple designs. The FL7733A also provides open-LED, short-LED, and over-temperature protection functions.

1.2. Controller Features

High Performance

- Cost Effective Solution without requiring the use of an Input Bulk Capacitor and Secondary-Side Feedback Circuitry
- Power Factor Correction
- THD <10% over Universal Line Range
- CC Tolerance:
 - < $\pm 1\%$ by Universal Line Voltage Variation
 - < $\pm 1\%$ by 50% ~ 100% Load Voltage Variation
 - < $\pm 1\%$ by $\pm 20\%$ Magnetizing Inductance Variation
- High-Voltage Startup with V_{DD} Regulation
- Adaptive Feedback Loop Control for Startup without Overshoot

High Reliability

- LED Short / Open Protection
- Output Diode Short Protection
- Sensing Resistor Short / Open Protection
- V_{DD} Over-Voltage Protection (OVP)
- V_{DD} Under-Voltage Lockout (UVLO)
- Over-Temperature Protection (OTP)
- All Protections by Auto Restart
- Cycle-by-Cycle Current Limit
- Application Voltage Range: $80 V_{AC} \sim 308 V_{AC}$

2. Evaluation Board Specifications

Table 1. Specifications for LED Lighting Load

Description		Symbol	Value	Comments
Input	Voltage	V _{IN.MIN}	90 V _{AC}	Minimum AC Input Voltage
		V _{IN.MAX}	277 V _{AC}	Maximum AC Input Voltage
		V _{IN.NOMINAL}	120 V / 230 V	Nominal AC Input Voltage
	Frequency	f _{IN}	60 Hz / 50 Hz	Line Frequency
Output	Voltage	V _{OUT.MIN}	7 V	Minimum Output Voltage
		V _{OUT.MAX}	55 V	Maximum Output Voltage
		V _{OUT.NOMINAL}	50 V	Nominal Output Voltage
	Current	I _{OUT.NOMINAL}	1.0 A	Nominal Output Current
		CC Deviation	< ±0.85%	Line Input Voltage Change: 90~277 V _{AC}
			< ±1.75%	Output Voltage Change: 7~55 V
Efficiency		Eff _{90VAC}	87.56%	Efficiency at 90 V _{AC} Input Voltage
		Eff _{120VAC}	88.96%	Efficiency at 120 V _{AC} Input Voltage
		Eff _{140VAC}	89.49%	Efficiency at 140 V _{AC} Input Voltage
		Eff _{180VAC}	90.13%	Efficiency at 180 V _{AC} Input Voltage
		Eff _{230VAC}	90.31%	Efficiency at 230 V _{AC} Input Voltage
		Eff _{277VAC}	90.26%	Efficiency at 277 V _{AC} Input Voltage
PF / THD		PF / THD _{90VAC}	0.997 / 3.36%	PF/THD at 90 V _{AC} Input Voltage
		PF / THD _{120VAC}	0.992 / 3.55%	PF/THD at 120 V _{AC} Input Voltage
		PF / THD _{140VAC}	0.987 / 3.60%	PF/THD at 140 V _{AC} Input Voltage
		PF / THD _{180VAC}	0.975 / 4.44%	PF/THD at 180 V _{AC} Input Voltage
		PF / THD _{230VAC}	0.944 / 5.36%	PF/THD at 230 V _{AC} Input Voltage
		PF / THD _{277VAC}	0.902 / 6.88%	PF/THD at 277 V _{AC} Input Voltage
Temperature	FL7733A	T _{FL7733A}	57.9°C	Open-Frame Condition (T _A = 25°C) FL7733A Temperature
	Primary MOSFET	T _{MOSFET}	66.1°C	Primary MOSFET Temperature
	Secondary Diode	T _{DIODE}	65.2°C	Secondary Diode Temperature
	Bridge Diode	T _{BRG-DIODE}	60.1°C	Bridge Diode Temperature

All data of the evaluation board measured with the board was enclosed in a case and external temperature around $T_A=25^\circ\text{C}$.

8.3. Constant-Current Regulation

The output current deviation for wide output voltage ranges from 7 V to 55 V is less than $\pm 1.75\%$ at each line voltage. Line regulation at the output voltage (52 V) is also less than $\pm 0.85\%$. The results were measured with E-load [CR Mode].

Figure 20. Constant-Current Regulation

Table 5. Constant-Current Regulation by Output Voltage Change (7 ~ 55 V)

Input Voltage	Min. Current [mA]	Max. Current [mA]	Tolerance
90 V _{AC} [60 Hz]	950	981	$\pm 1.61\%$
120 V _{AC} [60 Hz]	951	984	$\pm 1.71\%$
140 V _{AC} [60 Hz]	955	986	$\pm 1.60\%$
180 V _{AC} [50 Hz]	955	986	$\pm 1.60\%$

V_S Circuits for Wide Output

The first consideration for R1, R2, and R3 selection is to set V_S to 2.45 V to ensure high-frequency operation at the rated output power.

The second consideration is V_S blanking. The output voltage is detected by auxiliary winding and a resistive divider connected to the VS pin, as shown in Figure 21. However, in a single-stage flyback converter without a DC link capacitor, auxiliary winding voltage cannot be clamped to reflected output voltage at low line voltage due to the small L_m current, which induces V_S voltage-sensing error. Frequency decreases rapidly at the zero-crossing point of line voltage, which can cause LED light flicker. To maintain constant frequency over the whole sinusoidal line voltage, V_S blanking disables V_S sampling at less than a particular line voltage V_{IN,blnk} by sensing the auxiliary winding.

The third consideration is V_S level, which should be operated between 0.6 V and 3 V to avoid triggering SLP and V_S OVP in wide output application. V_S level can be maintained using additional V_S circuits, as shown in Figure 21.

Figure 21. External Circuitry for System Operation in Wide Output Voltage Ranges

Considering the maximum switching frequency up to 50% of maximum output voltage, Zener diode and R1, R2, and R3 are obtained as:

$$V_{ZD1} < (V_{DD,OVP} \times 0.5) - V_{F,D1} \quad (1)$$

where V_{F,D1} is the forward voltage of D1 connected in series with Zener diode ZD1.

Considering Zener diode voltage regulation and its power rating, R1 can be selected to limit the Zener diode current I_{ZD1} to 10 mA maximum, such as:

$$R1 = \frac{(V_{DD-OVP} - V_{SC})}{10mA} = 1.2 \text{ k}\Omega \quad (2)$$

where V_{SC} is voltage clamped by D1 and ZD1.

$$R2 = n_{AP} \times \frac{V_{IN,blnk}}{I_{VS,blnk}} - R1 \quad (3)$$

where V_{IN,blnk} and I_{VS,blnk} line voltage level and V_S current for V_S blanking, respectively.

$$R3 \geq \frac{R2 \times 2.45}{V_{SC} - 2.45} \quad (4)$$

Additional consideration in V_S circuits for wide output voltage range is t_{DIS} delay, which is caused by the voltage difference when the V_{AUX} across auxiliary winding is clamped to V_{SC} , as shown in Figure 22. This delay lasts until V_{AUX} is at the same level as V_{SC} and may affect constant output current regulation. It can be removed by capacitor C9 connected between auxiliary winding and cathode terminal of Zener diode ZD1. The V_{AUX} is divided into capacitor voltage V_{C3} and V_{ZD1} after the MOSFET gate is turned off. Then V_{C3} maintains its voltage without discharging while V_{ZD2} slowly decreases to $V_{AUX} - V_{C3}$ as the output diode current I_D reaches zero. Therefore, V_S can follow V_{AUX} , as shown by the dotted line in Figure 22. C3 should be selected to the proper value depending on resonant frequency determined by the resonance between magnetizing inductance L_m and MOSFET's C_{OSS} . The 330 pF used in this application was selected by trial and error. Its value can be obtained as:

$$C9 = \frac{300 \text{ kHz}}{f_r} \cdot 330 \text{ pF} \quad (5)$$

where f_r is the resonance frequency determined by the resonance between C_{OSS} and L_m .

Figure 22. Waveforms in V_S Circuits

V_{DD} Circuit for Wide Output

FL7733A's V_{DD} operation range is 8.75 ~ 23 V and UVLO is triggered and shuts down switching if output voltage is lower than $V_{OUT} - V_{UVLO}$ ($8.75 \times N_S / N_A$). Therefore, V_{DD} should be supplied properly without triggering UVLO across the wide output voltage range of 7 ~ 55 V. V_{DD} can be supplied by adding external winding N_E and V_{DD} circuits composed of voltage regulator, as shown in Figure 21. The N_E should be designed so V_{DD} can be supplied without triggering UVLO at minimum output voltage ($V_{min.OUT}$). Therefore, the external winding N_E can be determined as follows:

$$N_E > \frac{(8.75 + V_{CE,Q1} + V_{F,D3})}{(V_{F,D0} + V_{min.OUT})} \times N_S - N_A \quad (6)$$

where $V_{CE,Q1}$ is Q1's collector-emitter saturation voltage, $V_{F,D3}$ is D3's forward voltage, and $V_{F,D0}$ is forward voltage of the output diode at minimum output voltage.

8.4. Short- / Open-LED Protections

Figure 23 to Figure 26 show the operating waveforms when the LED short protection is triggered and recovered. Once the LED short occurs, SCP is triggered and V_{DD} starts “Hiccup” Mode with JFET regulation times [250 ms]. This lasts until the fault condition is removed. Systems can restart automatically when the output load returns to normal condition. CH1: V_{DD} (10 V / div), CH2: V_{IN} (200 V / div), CH3: V_{GATE} (10 V / div), I_{OUT} (500 mA / div), Time Scale: (500 ms / div).

Figure 23. $V_{IN} = 90 V_{AC} / 60 \text{ Hz}$, [LED Short]

Figure 24. $V_{IN} = 120 V_{AC} / 60 \text{ Hz}$, [LED Restore]

Figure 25. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$, [LED Short]

Figure 26. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$, [LED Restore]

Figure 27 to Figure 30 show the operating waveforms when the LED open condition is triggered and recovered. Once the output goes open circuit, V_S OVP or V_{DD} OVP are triggered and V_{DD} starts Hiccup Mode with JFET regulation times [250 ms]. This lasts until the fault condition is eliminated. Systems can restart automatically when returned to normal condition. CH1: V_{DD} (10 V / div), CH2: V_{IN} (200 V / div), CH3: V_{GATE} (10 V / div), V_{OUT} (50 V / div), Time Scale: (500 ms / div).

Figure 27. $V_{IN} = 90 V_{AC} / 60 \text{ Hz}$, [LED Short]

Figure 28. $V_{IN} = 90 V_{AC} / 60 \text{ Hz}$, [LED Restore]

Figure 29. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$, [LED Short]

Figure 30. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$, [LED Restore]

Note:

1. When the LED load is re-connected after open-LED condition, the output capacitor is quickly discharged through the LED load and the inrush current by the discharge could destroy the LED load.

8.5. Efficiency

System efficiency is 87.56% ~ 90.81% over input voltages 90 ~ 277 V_{AC}. The results were measured using actual rated LED loads 30 minutes after startup.

Figure 31. System Efficiency

Table 7. System Efficiency

Input Voltage	Input Power (W)	Output Current (A)	Output Voltage (V)	Output Power (W)	Efficiency (%)
90 V _{AC} [60 Hz]	53.68	0.952	49.40	47.00	87.56
120 V _{AC} [60 Hz]	53.18	0.955	49.52	47.31	88.96
140 V _{AC} [60 Hz]	53.05	0.958	49.57	47.47	89.49
180 V _{AC} [50 Hz]	54.43	0.963	50.95	49.06	90.13
230 V _{AC} [50 Hz]	54.66	0.969	50.94	49.36	90.31
277 V _{AC} [50 Hz]	54.78	0.974	50.78	49.44	90.26

8.6. Power Factor (PF) & Total Harmonic Distortion (THD)

The FL7733A evaluation board shows excellent THD performance: much less than 10%. The results were measured using actual rated LED loads 10 minutes after startup.

Figure 32. Power Factor & Total Harmonic Distortion

Table 8. Power Factor & Total Harmonic Distortion

Input Voltage	Output Current (A)	Output Voltage (V)	Power Factor	THD (%)
90 V _{AC} [60 Hz]	0.952	49.40	0.997	3.36
120 V _{AC} [60 Hz]	0.955	49.52	0.992	3.55
140 V _{AC} [60 Hz]	0.958	49.57	0.987	3.60
180 V _{AC} [50 Hz]	0.963	50.95	0.975	4.44
230 V _{AC} [50 Hz]	0.969	50.94	0.944	5.36
277 V _{AC} [50 Hz]	0.974	50.78	0.902	6.88

8.7. Harmonics

Figure 33 to Figure 36 show current harmonics measured using actual rated LED loads.

Figure 33. $V_{IN} = 90 V_{AC} / 60 \text{ Hz}$

Figure 34. $V_{IN} = 120 V_{AC} / 60 \text{ Hz}$

Figure 35. $V_{IN} = 230 V_{AC} / 50 \text{ Hz}$

Figure 36. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$

8.8. Operating Temperature

Temperatures on all components for this board are less than 68°C.

The results were measured using actual rated LED loads 60 minutes after startup.

Figure 37. $V_{IN} = 90 V_{AC} / 60 \text{ Hz}$

Figure 38. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$

Figure 39. $V_{IN} = 90 V_{AC} / 60 \text{ Hz}$

Figure 40. $V_{IN} = 277 V_{AC} / 50 \text{ Hz}$

Note:

- The IC temperature can be improved by the PCB layout.

8.9. Electromagnetic Interference (EMI)

All measurements were conducted in observance of EN55022 criteria.

The results were measured using actual rated LED loads 30 minutes after startup.

Figure 41. V_{IN} [220 V_{AC}, Neutral]

Figure 42. V_{IN} [110 V_{AC}, Live]

9. Revision History

Rev.	Date	Description
1.0	Sep. 2014	Initial Release

WARNING AND DISCLAIMER

Replace components on the Evaluation Board only with those parts shown on the parts list (or Bill of Materials) in the Users' Guide. Contact an authorized Fairchild representative with any questions.

The Evaluation board (or kit) is for demonstration purposes only and neither the Board nor this User's Guide constitute a sales contract or create any kind of warranty, whether express or implied, as to the applications or products involved. Fairchild warrants that its products meet Fairchild's published specifications, but does not guarantee that its products work in any specific application. Fairchild reserves the right to make changes without notice to any products described herein to improve reliability, function, or design. Either the applicable sales contract signed by Fairchild and Buyer or, if no contract exists, Fairchild's standard Terms and Conditions on the back of Fairchild invoices, govern the terms of sale of the products described herein.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
