

AM26C31 Quadruple Differential Line Driver

1 Features

- Meets or Exceeds the Requirements of TIA/EIA-422-B and ITU Recommendation V.11
- Low Power, $I_{CC} = 100 \mu A$ Typical
- Operates From a Single 5-V Supply
- High Speed, $t_{PLH} = t_{PHL} = 7 \text{ ns}$ Typical
- Low Pulse Distortion, $t_{sk(p)} = 0.5 \text{ ns}$ Typical
- High Output Impedance in Power-Off Conditions
- Improved Replacement for AM26LS31 Device
- Available in Q-Temp Automotive
 - High-Reliability Automotive Applications
 - Configuration Control and Print Support
 - Qualification to Automotive Standards
- On Products Compliant to MIL-PRF-38535, All Parameters Are Tested Unless Otherwise Noted. On All Other Products, Production Processing Does Not Necessarily Include Testing of All Parameters.

2 Applications

- Chemical and Gas Sensors
- Field Transmitters: Temperature Sensors and Pressure Sensors
- Military: Radars and Sonars
- Motor Control: Brushless DC and Brushed DC
- Military and Avionics Imaging
- Temperature Sensors and Controllers Using Modbus

3 Description

The AM26C31 device is a differential line driver with complementary outputs, designed to meet the requirements of TIA/EIA-422-B and ITU (formerly CCITT). The 3-state outputs have high-current capability for driving balanced lines, such as twisted-pair or parallel-wire transmission lines, and they provide the high-impedance state in the power-off condition. The enable functions are common to all four drivers and offer the choice of an active-high (G) or active-low (\bar{G}) enable input. BiCMOS circuitry reduces power consumption without sacrificing speed.

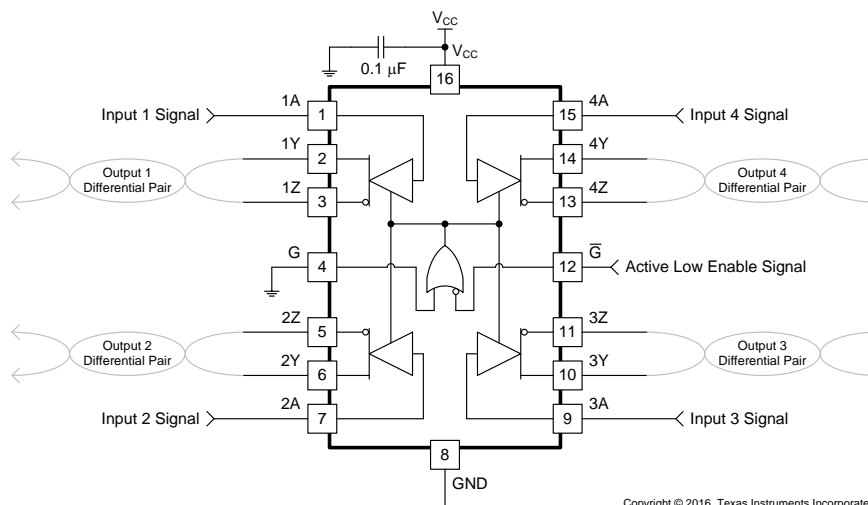

The AM26C31C device is characterized for operation from 0°C to 70°C , the AM26C31I device is characterized for operation from -40°C to 85°C , the AM26C31Q device is characterized for operation over the automotive temperature range of -40°C to 125°C , and the AM26C31M device is characterized for operation over the full military temperature range of -55°C to 125°C .

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage ⁽²⁾	–0.5	7	V
V _I	Input voltage	–0.5	V _{CC} + 0.5	V
V _{ID}	Differential input voltage	–14	14	V
V _O	Output voltage	–0.5	7	
I _{IK} I _{OK}	Input or output clamp current		±20	mA
I _O	Output current		±150	mA
	V _{CC} current		200	mA
	GND current	–200		mA
T _J	Operating virtual junction temperature		150	°C
T _{stg}	Storage temperature	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to the network ground terminal.

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

			MIN	NOM	MAX	UNIT
V _{CC}	Supply voltage		4.5	5	5.5	V
V _{ID}	Differential input voltage			±7		V
V _{IH}	High-level input voltage		2			V
V _{IL}	Low-level input voltage				0.8	V
I _{OH}	High-level output current				–20	mA
I _{OL}	Low-level output current				20	mA
T _A	Operating free-air temperature	AM26C31C	0		70	°C
		AM26C31I	–40		85	
		AM26C31Q	–40		125	
		AM26C31M	–55		125	

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		AM26C31								UNIT

		16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	
R _{θJA}	Junction-to-ambient thermal resistance ⁽²⁾⁽³⁾	75.3	93.1	102.1	75.6	44.5	—	—	—	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	35.6	43.8	37.2	32.6	31.1	39.3 ⁽⁴⁾	58.9 ⁽⁴⁾	37.1 ⁽⁴⁾	°C/W
R _{θJB}	Junction-to-board thermal resistance	32.5	43.6	47.0	36.4	24.5	56.4 ⁽⁴⁾	109.3 ⁽⁴⁾	36.2 ⁽⁴⁾	°C/W
ψ _{JT}	Junction-to-top characterization parameter	7.1	9.6	2.8	5.7	15.4	—	—	—	°C/W
ψ _{JB}	Junction-to-board characterization parameter	32.3	43.1	46.4	36.0	24.4	—	—	—	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	n/a	n/a	n/a	n/a	n/a	12.0 ⁽⁴⁾	5.7 ⁽⁴⁾	4.3 ⁽⁴⁾	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) Maximum power dissipation is a function of T_{J(max)}, R_{θJA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is P_D = (T_{J(max)} – T_A) / R_{θJA}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (3) The package thermal impedance is calculated in accordance with JESD 51-7.
- (4) Modelling assumption: MIL-STD-883 for R_{θJC(top)} and R_{θJC(bot)} JESD51 for R_{θJB}.

6.5 Electrical Characteristics: AM26C31C and AM26C31I

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP ⁽¹⁾	MAX	UNIT
V _{OH}	High-level output voltage	I _O = –20 mA		2.4	3.4		V
V _{OL}	Low-level output voltage	I _O = 20 mA			0.2	0.4	V
V _{OD}	Differential output voltage magnitude	R _L = 100 Ω, see Figure 2		2	3.1		V
Δ V _{OD}	Change in magnitude of differential output voltage ⁽²⁾	R _L = 100 Ω, see Figure 2				±0.4	V
V _{OC}	Common-mode output voltage	R _L = 100 Ω, see Figure 2				3	V
Δ V _{OC}	Change in magnitude of common-mode output voltage ⁽²⁾	R _L = 100 Ω, see Figure 2				±0.4	V
I _I	Input current	V _I = V _{CC} or GND				±1	μA
I _{O(off)}	Driver output current with power off	V _{CC} = 0	V _O = 6 V			100	μA
			V _O = –0.25 V			–100	
I _{OS}	Driver output short-circuit current	V _O = 0		–30		–150	mA
I _{OZ}	High-impedance off-state output current	V _O = 2.5 V				20	μA
		V _O = 0.5 V				–20	
I _{CC}	Quiescent supply current	I _O = 0	V _I = 0 or 5 V			100	μA
			V _I = 2.4 V or 0.5 V ⁽³⁾		1.5	3	mA
C _i	Input capacitance				6		pF

- (1) All typical values are at V_{CC} = 5 V and T_A = 25°C.
- (2) Δ|V_{OD}| and Δ|V_{OC}| are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.
- (3) This parameter is measured per input. All other inputs are at 0 or 5 V.

AM26C31

6.6 Electrical Characteristics: AM26C31Q and AM26C31M

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V _{OH}	High-level output voltage	I _O = –20 mA	2.2	3.4		V
V _{OL}	Low-level output voltage	I _O = 20 mA		0.2	0.4	V
V _{OD}	Differential output voltage magnitude	R _L = 100 Ω, see Figure 2	2	3.1		V
Δ V _{OD}	Change in magnitude of differential output voltage ⁽²⁾	R _L = 100 Ω, see Figure 2			±0.4	V
V _{OC}	Common-mode output voltage	R _L = 100 Ω, see Figure 2			3	V
Δ V _{OC}	Change in magnitude of common-mode output voltage ⁽²⁾	R _L = 100 Ω, see Figure 2			±0.4	V
I _I	Input current	V _I = V _{CC} or GND			±1	μA
I _{O(off)}	Driver output current with power off	V _{CC} = 0			100	μA
		V _O = 6 V			–100	μA
I _{OS}	Driver output short-circuit current	V _O = 0			–170	mA
I _{OZ}	High-impedance off-state output current	V _O = 2.5 V			20	μA
		V _O = 0.5 V			–20	μA
I _{CC}	Quiescent supply current	I _O = 0			100	μA
		V _I = 0 or 5 V			3.2	mA
		V _I = 2.4 V or 0.5 V ⁽³⁾				
C _i	Input capacitance			6		pF

 (1) All typical values are at V_{CC} = 5 V and T_A = 25°C.

 (2) Δ|V_{OD}| and Δ|V_{OC}| are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.

(3) This parameter is measured per input. All other inputs are at 0 or 5 V.

6.7 Switching Characteristics: AM26C31C and AM26C31I

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
t _{PLH}	Propagation delay time, low-to-high-level output	S1 is open, see Figure 3	3	7	12	ns
t _{PHL}	Propagation delay time, high-to-low-level output		3	7	12	
t _{sk(p)}	Pulse skew time (t _{PLH} – t _{PHL})	S1 is open, see Figure 3		0.5	4	ns
t _{r(OD)} , t _{f(OD)}	Differential output rise and fall times	S1 is open, see Figure 4		5	10	ns
t _{PZH}	Output enable time to high level	S1 is closed, see Figure 5		10	19	ns
t _{PZL}	Output enable time to low level			10	19	
t _{PHZ}	Output disable time from high level	S1 is closed, see Figure 5		7	16	ns
t _{PLZ}	Output disable time from low level			7	16	
C _{pd}	Power dissipation capacitance (each driver) ⁽²⁾	S1 is open, see Figure 3		170		pF

 (1) All typical values are at V_{CC} = 5 V and T_A = 25°C.

 (2) C_{pd} is used to estimate the switching losses according to P_D = C_{pd} × V_{CC}² × f, where f is the switching frequency.

6.8 Switching Characteristics: AM26C31Q and AM26C31M

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT

8 Detailed Description

8.1 Overview

The AM26C31 is a quadruple differential line driver with complementary outputs. The device is designed to meet the requirements of TIA/EIA-422-B and ITU (formerly CCITT), and it is generally used to communicate over relatively long wires in noisy environments.

8.2 Functional Block Diagrams

Figure 7. Schematics of Inputs and Outputs

8.3 Feature Description

8.3.1 Active-High and Active-Low

The device can be configured using the G and \bar{G} logic inputs to select transmitter output. A logic high on the G pin or a logic low on the \bar{G} pin enables the device to operate. These pins are simply a way to configure the logic to match that of the receiving or transmitting controller or microprocessor.

8.3.2 Operates from a Single 5-V Supply

Both the logic and transmitters operate from a single 5-V rail, making designs much more simple. The line drivers and receivers can operate off the same rail as the host controller or a similar low voltage supply, thus simplifying power structure.

8.4 Device Functional Modes

Table 1 lists the functional modes of the AM26C31.

Table 1. Function Table (Each Driver)⁽¹⁾

INPUT A	ENABLES		OUTPUTS	
	G	\bar{G}	Y	Z
H	H	X	H	L
L	H	X	L	H
H	X	L	H	L
L	X	L	L	H
X	L	H	Z	Z

(1) H = High level,
L = Low level,
X = Irrelevant,
Z = High impedance (off)

9 Application and Implementation

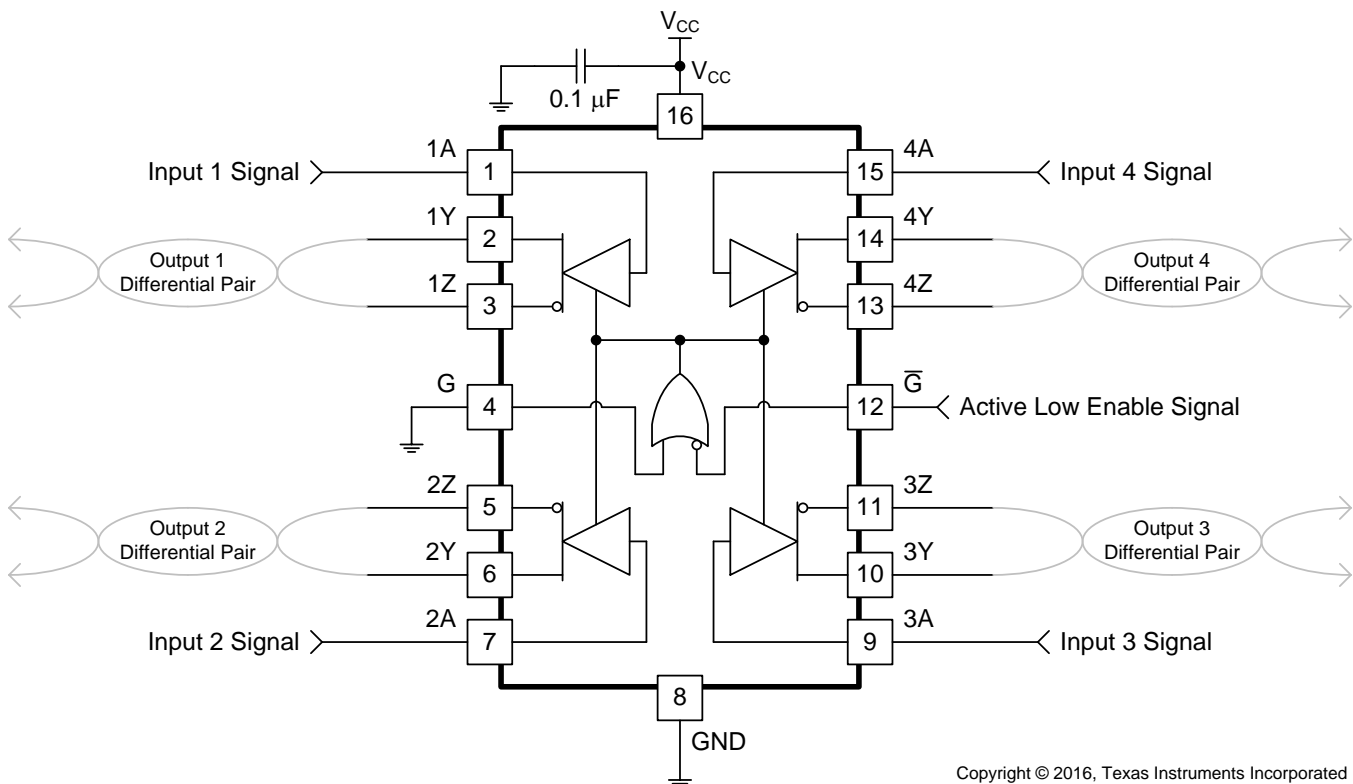

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

When designing a system that uses drivers, receivers, and transceivers that comply with RS-422, proper cable termination is essential for highly reliable applications with reduced reflections in the transmission line. Because RS-422 allows only one driver on the bus, if termination is used, it is placed only at the end of the cable near the last receiver. Factors to consider when determining the type of termination usually are performance requirements of the application and the ever-present factor, cost. The different types of termination techniques discussed are unterminated lines, parallel termination, AC termination, and multipoint termination. For laboratory experiments, 100 feet of 100- Ω , 24-AWG, twisted-pair cable (Bertek) was used. A single driver and receiver, TI AM26C31C and AM26C32C, respectively, were tested at room temperature with a 5-V supply voltage. To show voltage waveforms related to transmission-line reflections, the first plot shows output waveforms from the driver at the start of the cable (A/B); the second plot shows input waveforms to the receiver at the far end of the cable (Y).

9.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

Figure 8. Differential Terminated Configuration With All Channels and Active Low Enable Used

9.2.1 Design Requirements

Resistor and capacitor (if used) termination values are shown for each laboratory experiment, but vary from system to system. For example, the termination resistor, R_T , must be within 20% of the characteristic impedance, Z_0 , of the cable and can vary from about 80 Ω to 120 Ω .

Typical Application (continued)

9.2.2 Detailed Design Procedure

Ensure values in [Absolute Maximum Ratings](#) are not exceeded.

Supply voltage, V_{IH} , and V_{IL} must comply with [Recommended Operating Conditions](#).

9.2.3 Application Curve

Figure 9. Differential 120-Ω Terminated Output Waveforms (Cat 5E Cable)

10 Power Supply Recommendations

Place 0.1-μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high impedance power supplies.

11 Layout

11.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
 - Connect low-ESR, 0.1- μ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

11.2 Layout Example

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser based versions of this data sheet, refer to the left hand navigation.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF AM26C31, AM26C31M :

- Catalog: [AM26C31](#)
- Enhanced Product: [AM26C31-EP](#), [AM26C31-EP](#)
- Military: [AM26C31M](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Enhanced Product - Supports Defense, Aerospace and Medical Applications
- Military - QML certified for Military and Defense Applications

 - The 20 pin end lead shoulder width is a vendor option, either half or full width.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
