DUAL SPDT SWITCH DC - 2.5 GHz

Features

RoHS-Compliant Product Integrated Dual SPDTs Low Insertion Loss: <0.5 dB @ 2 GHz Positive Control: 0/+5V, 0/+3V Ultra Small MSOP8 Package: 14.8 mm²

General Description

The HMC199AMS8 & HMC199AMS8E are low-cost general purpose dual SPDT GaAs "bypass" switches in 8-lead MSOP packages covering DC to 2.5 GHz. These four-RF-port components integrate two SPDT switches and a through line onto a single IC. The designs provide low insertion loss of less than 0.5 dB while switching passive or active external circuit components in and out of the signal path. Port to port isolations are typically 25 to 30 dB. On-chip circuitry enables positive voltage control operation at very low DC currents with control inputs compatible with CMOS and most TTL logic families. Applications include LNA or filter bypass switching and single bit attenuator switching. The HMC199AMS8E is a RoHS-compliant product.

DUAL SPDT SWITCH DC - 2.5 GHz

Typical Application Circuit

Notes:

- 1. Set A/B control to 0/+5V, Vdd = +5V and use HCT series logic to provide a TTL driver interface.
- 2. Control inputs A/B can be driven directly with CMOS logic (HC) with Vdd = 5 to 7 Volts applied to the CMOS logic gates.
- 3. DC Blocking capacitors are required for each RF port as shown. Capacitor value determines lowest frequency of operation.
- 4. Highest RF signal power capability is achieved with Vdd = +7V and A/B set to 0/+7V.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should be generated with proper RF circuit design techniques. Signal lines at the RF ports should have 50 ohm impedance. The evaluation circuit board shown above is available from Hittite Microwave Corporation upon request.

*R1 & R2 = 100 Ohm. These optional resistors will provide more RF path to control circuit isolation.
