700C Charger LED Operation (Single and Quad Charger)

700C Charger LED Operation (Single and Quad Charger)

The 700C Battery Chargers (Single Charger, 852-060-004 and Quad Charger, 852-060-005) were designed for **compatibil**[ity] with the European RoHS requirement. Since a new controller chip had to be used in the design, the yellow LED will always [be] illuminated when no battery pack is present in the charger. This is in contrast to the earlier versions of this charger where t[here] was no LED illuminated with an empty slot in the charger.

The Intermec User Guide doesn't explicitly inform the user of this. However, it does point out that a yellow LED indication could be the result of the battery pack not being inserted into the charger properly.
