

MAX14634/MAX14680

Ultra-Low On-Resistance and Compact Bidirectional Battery Switches

General Description

The MAX14634/MAX14680 bidirectional battery switches feature reverse blocking capability to isolate the battery from the system. These internal switches feature ultra-low $7\text{m}\Omega$ (typ) on-resistance and operate from a +2.3V to +5.5V input voltage range, making these devices ideal battery-disconnect switches for high-capacity battery applications. The slow-rate controlled switches are also ideal for a large load capacitor as well as high-current load switching applications.

The devices are available in an ultra-small 12-bump (1.3mm x 1.7mm, 0.4mm pitch) WLP package. The tiny, low-profile package is suitable for space-limited portable device applications. The devices operate over the -40°C to $+85^{\circ}\text{C}$ extended temperature range.

Applications

Tablet PC Battery Switches
Smartphone Battery Switches
Battery Isolators

Benefits and Features

- ◆ **Provide Efficient System Battery Switch**
 - ✧ Integrated FET for Bidirectional Blocking
 - ✧ Ultra-Low $7\text{m}\Omega$ (typ) R_{ON}
 - ✧ Wide +2.3V to +5.5V Input Voltage Range
 - ✧ Low Quiescent Current
- ◆ **Save Space**
 - ✧ Integrated Pulldown and Logic Buffer Circuits
 - ✧ 12-Bump, 1.3mm x 1.7mm, 0.4mm Pitch WLP Package

Typical Operating Circuit

MAX14634/MAX14680

Ultra-Low On-Resistance and Compact Bidirectional Battery Switches

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

PWRA, PWRB, $\overline{\text{EN}}$, EN -0.3V to +6V

Current into PWRA, PWRB $\pm 7\text{A}$

Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)

WLP (derate 13.7mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$) 1096mW

Operating Temperature Range -40°C to $+85^\circ\text{C}$

Maximum Junction Temperature $+150^\circ\text{C}$

Storage Temperature Range -65°C to $+150^\circ\text{C}$

Soldering Temperature (reflow) $+260^\circ\text{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PACKAGE THERMAL CHARACTERISTICS (Note 1)

WLP

Junction-to-Ambient Thermal Resistance (θ_{JA}) 73°C/W

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

ELECTRICAL CHARACTERISTICS

(V_{PWRA} , $V_{PWRB} = 2.3\text{V}$ to 5.5V ; $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$, unless otherwise noted. Typical values are at V_{PWRA} , $V_{PWRB} = 4.2\text{V}$; C_{PWRA} , $C_{PWRB} = 0.1\mu\text{F}$; $T_A = +25^\circ\text{C}$.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS
SUPPLY OPERATION							
Operating Voltage	V _{PWRA} V _{PWRB}			2.3		5.5	V

Functional Diagram

Detailed Description

The MAX14634/MAX14680 bidirectional battery switches feature reverse blocking capability to isolate the battery from the system. These internal switches feature ultra-low 7m Ω (typ) on-resistance and operate from a +2.3V to +5.5V input voltage range, making these devices ideal as battery-disconnect switches for high-capacity battery applications. The slew-rate controlled switches are also ideal for a large load capacitor as well as high-current load switching applications.

The devices are available in an ultra-small 12-bump (1.3mm x 1.7mm, 0.4mm pitch) WLP package. The tiny, low-profile package is suitable for space-limited portable device applications. The devices operate over the -40°C to +85°C extended temperature range.

Reverse-Current Blocking

The bidirectional FET switch prevents current flowing from either power input to the other when the switch is disabled.

$\overline{\text{EN}}/\text{EN}$ Input

The MAX14634's switch position is controlled by an $\overline{\text{EN}}$ active-low logic input. The switch is on when $\overline{\text{EN}}$ is logic-low and off when $\overline{\text{EN}}$ is logic-high. $\overline{\text{EN}}$ is internally pulled down to ground by R_{PD} .

The MAX14680's switch position is controlled by an EN active-high logic input. The switch is on when EN is logic-high and off when EN is logic-low. EN is internally pulled down to ground by R_{PD} .
