|                  |  |  |  |      ## 6.24.6 Electrical specification

### 6.24.6.1 SPIS slave interface electrical specifications

| Symbol                  | Description                                             | Min. | Typ.  | Max.            | Units         |
|-------------------------|---------------------------------------------------------|------|-------|-----------------|---------------|
| $f_{\text{SPIS}}$       | Bit rates for SPIS <sup>31</sup>                        |      |       | 8 <sup>32</sup> | Mbps          |
| $t_{\text{SPIS,START}}$ | Time from RELEASE task to receive/transmit (CSN active) |      | 0.125 |                 | $\mu\text{s}$ |

### 6.24.6.2 Serial Peripheral Interface Slave (SPIS) timing specifications

| Symbol                   | Description                        | Min.             | Typ. | Max. | Units |
|--------------------------|------------------------------------|------------------|------|------|-------|
| $t_{\text{SPIS,CCKIN}}$  | SCK input period                   | 125              |      |      | ns    |
| $t_{\text{SPIS,RFCKIN}}$ | SCK input rise/fall time           |                  |      | 30   | ns    |
| $t_{\text{SPIS,WHCKIN}}$ | SCK input high time                | 30               |      |      | ns    |
| $t_{\text{SPIS,WLCKIN}}$ | SCK input low time                 | 30               |      |      | ns    |
| $t_{\text{SPIS,SUCSN}}$  | CSN to CLK setup time              | 1000             |      |      | ns    |
| $t_{\text{SPIS,HCSN}}$   | CLK to CSN hold time               | 1000             |      |      | ns    |
| $t_{\text{SPIS,ASA}}$    | CSN to MISO driven                 | 0                |      |      | ns    |
| $t_{\text{SPIS,ASO}}$    | CSN to MISO valid <sup>33</sup>    |                  |      | 1000 | ns    |
| $t_{\text{SPIS,DISSO}}$  | CSN to MISO disabled <sup>33</sup> |                  |      | 68   | ns    |
| $t_{\text{SPIS,CWH}}$    | CSN inactive time                  | 300              |      |      | ns    |
| $t_{\text{SPIS,VSO}}$    | CLK edge to MISO valid             |                  |      | 19   | ns    |
| $t_{\text{SPIS,HSD}}$    | MISO hold time after CLK edge      | 18 <sup>34</sup> |      |      | ns    |
| $t_{\text{SPIS,SUSI}}$   | MOSI to CLK edge setup time        | 59               |      |      | ns    |
| $t_{\text{SPIS,HSI}}$    | CLK edge to MOSI hold time         | 20               |      |      | ns    |

<sup>31</sup> High bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>32</sup> The actual maximum data rate depends on the master's CLK to MISO and MOSI setup and hold timings.

<sup>33</sup> At 25 pF load, including GPIO capacitance, see [GPIO electrical specification](#).

<sup>34</sup> This is to ensure compatibility to SPI masters sampling MISO on the same edge as MOSI is output

## 6.25 SWI — Software interrupts

A set of interrupts have been reserved for use as software interrupts.

### 6.25.1 Registers

| Base address | Peripheral | Instance | Description          | Configuration |
|--------------|------------|----------|----------------------|---------------|
| 0x40014000   | SWI        | SWI0     | Software interrupt 0 |               |
| 0x40015000   | SWI        | SWI1     | Software interrupt 1 |               |
| 0x40016000   | SWI        | SWI2     | Software interrupt 2 |               |
| 0x40017000   | SWI        | SWI3     | Software interrupt 3 |               |
| 0x40018000   | SWI        | SWI4     | Software interrupt 4 |               |
| 0x40019000   | SWI        | SWI5     | Software interrupt 5 |               |

Table 111: Instances

## 6.26 TEMP — Temperature sensor

The temperature sensor measures die temperature over the temperature range of the device. Linearity compensation can be implemented if required by the application.

Listed here are the main features for TEMP:

- Temperature range is greater than or equal to operating temperature of the device
- Resolution is 0.25 degrees

TEMP is started by triggering the START task.

When the temperature measurement is completed, a DATARDY event will be generated and the result of the measurement can be read from the TEMP register.

To achieve the measurement accuracy stated in the electrical specification, the crystal oscillator must be selected as the HFCLK source, see [CLOCK — Clock control](#) on page 82 for more information.

When the temperature measurement is completed, TEMP analog electronics power down to save power.

TEMP only supports one-shot operation, meaning that every TEMP measurement has to be explicitly started using the START task.

### 6.26.1 Registers

| Base address | Peripheral | Instance | Description        | Configuration |
|--------------|------------|----------|--------------------|---------------|
| 0x4000C000   | TEMP       | TEMP     | Temperature sensor |               |

Table 112: Instances

| Register       | Offset | Description                                  |
|----------------|--------|----------------------------------------------|
| TASKS_START    | 0x000  | Start temperature measurement                |
| TASKS_STOP     | 0x004  | Stop temperature measurement                 |
| EVENTS_DATARDY | 0x100  | Temperature measurement complete, data ready |
| INTENSET       | 0x304  | Enable interrupt                             |
| INTENCLR       | 0x308  | Disable interrupt                            |
| TEMP           | 0x508  | Temperature in °C (0.25° steps)              |
| A0             | 0x520  | Slope of first piecewise linear function     |

| Register | Offset | Description                                     |
|----------|--------|-------------------------------------------------|
| A1       | 0x524  | Slope of second piecewise linear function       |
| A2       | 0x528  | Slope of third piecewise linear function        |
| A3       | 0x52C  | Slope of fourth piecewise linear function       |
| A4       | 0x530  | Slope of fifth piecewise linear function        |
| A5       | 0x534  | Slope of sixth piecewise linear function        |
| B0       | 0x540  | y-intercept of first piecewise linear function  |
| B1       | 0x544  | y-intercept of second piecewise linear function |
| B2       | 0x548  | y-intercept of third piecewise linear function  |
| B3       | 0x54C  | y-intercept of fourth piecewise linear function |
| B4       | 0x550  | y-intercept of fifth piecewise linear function  |
| B5       | 0x554  | y-intercept of sixth piecewise linear function  |
| T0       | 0x560  | End point of first piecewise linear function    |
| T1       | 0x564  | End point of second piecewise linear function   |
| T2       | 0x568  | End point of third piecewise linear function    |
| T3       | 0x56C  | End point of fourth piecewise linear function   |
| T4       | 0x570  | End point of fifth piecewise linear function    |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  y-intercept of sixth piecewise linear function

|                  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |  |  |  |  | | ID               |  |  |   0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 6.26.2 Electrical specification

### 6.26.2.1 Temperature Sensor Electrical Specification

| Symbol                    | Description                                               | Min. | Typ.  | Max. | Units |
|---------------------------|-----------------------------------------------------------|------|-------|------|-------|
| t <sub>TEMP</sub>         | Time required for temperature measurement                 |      | 36    |      | μs    |
| T <sub>TEMP,RANGE</sub>   | Temperature sensor range                                  | -40  |       | 105  | °C    |
| T <sub>TEMP,ACC</sub>     | Temperature sensor accuracy                               | -5   |       | 5    | °C    |
| T <sub>TEMP,ACC,EXT</sub> | Temperature sensor accuracy, extended temperature range   | -7   |       | 7    | °C    |
| T <sub>TEMP,RES</sub>     | Temperature sensor resolution                             |      | 0.25  |      | °C    |
| T <sub>TEMP,STB</sub>     | Sample to sample stability at constant device temperature |      | ±0.25 |      | °C    |
| T <sub>TEMP,OFFST</sub>   | Sample offset at 25°C                                     | -2.5 |       | 2.5  | °C    |

## 6.27 TWI — I<sup>2</sup>C compatible two-wire interface

The TWI master is compatible with I<sup>2</sup>C operating at 100 kHz and 400 kHz.

Figure 153: TWI master's main features

### 6.27.1 Functional description

This TWI master is not compatible with CBUS. The TWI transmitter and receiver are single buffered.

See [TWI master's main features](#) on page 432.

A TWI setup with one master and three slaves is shown in the following figure. This TWI master is only able to operate as the only master on the TWI bus.

Figure 154: A typical TWI setup with one master and three slaves

This TWI master supports clock stretching performed by the slaves. The TWI master is started by triggering the STARTTX or STARTRX tasks, and stopped by triggering the STOP task.

If a NACK is clocked in from the slave, the TWI master will generate an ERROR event.

### 6.27.2 Master mode pin configuration

The different signals SCL and SDA associated with the TWI master are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

If the CONNECT field of a PSEL.xxx register is set to Disconnected, the associated TWI signal is not connected to any physical pin. The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI master is enabled, and retained only as long as the device is in ON mode. PSEL.SCL and PSEL.SDA must only be configured when TWI is disabled.

To secure correct signal levels on the pins used by the TWI master when the system is in OFF mode, and when the TWI master is disabled, these pins must be configured in the GPIO peripheral as described in [GPIO configuration](#) on page 433.

Only one peripheral can be assigned to drive a particular GPIO pin at a time, failing to do so may result in unpredictable behavior.

| TWI master signal | TWI master pin           | Direction | Drive strength | Output value   |
|-------------------|--------------------------|-----------|----------------|----------------|
| SCL               | As specified in PSEL.SCL | Input     | S0D1           | Not applicable |
| SDA               | As specified in PSEL.SDA | Input     | S0D1           | Not applicable |

Table 114: GPIO configuration

### 6.27.3 Shared resources

TWI shares registers and other resources with other peripherals that have the same ID as TWI.

Therefore, you must disable all peripherals that have the same ID as TWI before TWI can be configured and used. Disabling a peripheral that has the same ID as TWI will not reset any of the registers that are shared with TWI. It is therefore important to configure all relevant TWI registers explicitly to secure that it operates correctly.

The Instantiation table in [Instantiation](#) on page 22 shows which peripherals have the same ID as TWI.

### 6.27.4 Master write sequence

A TWI master write sequence is started by triggering the STARTTX task. After the STARTTX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1).

The address must match the address of the slave device that the master wants to write to. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) generated by the slave.

After receiving the ACK bit, the TWI master will clock out the data bytes that are written to the TXD register. Each byte clocked out from the master will be followed by an ACK/NACK bit clocked in from the slave. A TXDSENT event will be generated each time the TWI master has clocked out a TXD byte, and the associated ACK/NACK bit has been clocked in from the slave.

The TWI master transmitter is single buffered. A second byte can only be written to the TXD register after the previous byte has been clocked out and the ACK/NACK bit clocked in, that is, after the TXDSENT event has been generated.

If the CPU is prevented from writing to TXD when the TWI master is ready to clock out a byte, the TWI master will stretch the clock until the CPU has written a byte to the TXD register.

A typical TWI master write sequence is illustrated in [The TWI master writing data to a slave](#) on page 434. Occurrence 3 in the figure illustrates delayed processing of the TXDSENT event associated with TXD byte 1. In this scenario the TWI master will stretch the clock to prevent writing erroneous data to the slave.

Figure 155: The TWI master writing data to a slave

The TWI master write sequence is stopped when the STOP task is triggered, causing the TWI master to generate a stop condition on the TWI bus.

### 6.27.5 Master read sequence

A TWI master read sequence is started by triggering the STARTRX task. After the STARTRX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE = 0, READ = 1).

The address must match the address of the slave device that the master wants to read from. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK = 1) generated by the slave.

After having sent the ACK bit, the TWI slave will send data to the master using the clock generated by the master.

The TWI master will generate a RXDRDY event every time a new byte is received in the RXD register.

After receiving a byte, the TWI master will delay sending the ACK/NACK bit by stretching the clock until the CPU has extracted the received byte, by reading the RXD register.

The TWI master read sequence is stopped by triggering the STOP task. This task must be triggered before the last byte is extracted from RXD to ensure that the TWI master sends a NACK back to the slave before generating the stop condition.

A typical TWI master read sequence is illustrated in [The TWI master reading data from a slave](#) on page 435. Occurrence 3 in this figure illustrates delayed processing of the RXDRDY event associated with RXD byte B. In this scenario the TWI master will stretch the clock to prevent the slave from overwriting the contents of the RXD register.

Figure 156: The TWI master reading data from a slave

### 6.27.6 Master repeated start sequence

A typical repeated start sequence is one in which the TWI master writes one byte to the slave followed by reading M bytes from the slave. Any combination and number of transmit and receive sequences can be combined in this fashion. Only one shortcut to STOP can be enabled at any given time.

The following figure shows a repeated start sequence where the TWI master writes one byte, followed by reading M bytes from the slave without performing a stop in-between.

Figure 157: Repeated start sequence illustration

To generate a repeated start after a read sequence, a second start task, `STARTRX` or `STARTTX`, must be triggered instead of the `STOP` task. This start task must be triggered before the last byte is extracted from `RXD` to ensure that the TWI master sends a NACK back to the slave before generating the repeated start condition.

### 6.27.7 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The `STOP` task is not always needed, like when the peripheral is already stopped. If the `STOP` task is sent, the software shall wait until the `STOPPED` event was received as a response before disabling the peripheral through the `ENABLE` register.

### 6.27.8 Registers

| Base address | Peripheral | Instance | Description                 | Configuration |
|--------------|------------|----------|-----------------------------|---------------|
| 0x40003000   | TWI        | TWI0     | Two-wire interface master 0 | Deprecated    |
| 0x40004000   | TWI        | TWI1     | Two-wire interface master 1 | Deprecated    |

Table 115: Instances

| Register                      | Offset | Description                                                                |
|-------------------------------|--------|----------------------------------------------------------------------------|
| <code>TASKS_STARTRX</code>    | 0x000  | Start TWI receive sequence                                                 |
| <code>TASKS_STARTTX</code>    | 0x008  | Start TWI transmit sequence                                                |
| <code>TASKS_STOP</code>       | 0x014  | Stop TWI transaction                                                       |
| <code>TASKS_SUSPEND</code>    | 0x01C  | Suspend TWI transaction                                                    |
| <code>TASKS_RESUME</code>     | 0x020  | Resume TWI transaction                                                     |
| <code>EVENTS_STOPPED</code>   | 0x104  | TWI stopped                                                                |
| <code>EVENTS_RXDREADY</code>  | 0x108  | TWI RXD byte received                                                      |
| <code>EVENTS_TXDSENT</code>   | 0x11C  | TWI TXD byte sent                                                          |

Table 116: Register overview

#### 6.27.8.1 `TASKS_STARTRX`

Address offset: 0x000

Start TWI receive sequence

### 6.27.8.2 TASKS STARTTX

Start TWI transmit sequence

### 6.27.8.3 TASKS STOP

## Stop TWI transaction

#### 6.27.8.4 TASKS SUSPEND

### Suspend TWI transaction

## 6.27.8.5 TASKS RESUME

## Resume TWI transaction

#### 6.27.8.6 EVENTS STOPPED

TWI stopped

#### 6.27.8.7 EVENTS\_RXDREADY

TWI RXD byte received

#### 6.27.8.8 EVENTS\_TXDSENT

TWI TXD byte sent

#### 6.27.8.9 EVENTS\_ERROR

TWI error

### 6.27.8.11 EVENTS\_SUSPENDED

Address offset: 0x148

TWI entered the suspended state

Generated just after ACK bit has been transferred in a read transaction, and only if SUSPEND has been requested earlier.

   ## 6.27.9 Electrical specification

### 6.27.9.1 TWI interface electrical specifications

| Symbol          | Description                                            | Min. | Typ. | Max. | Units   |
|-----------------|--------------------------------------------------------|------|------|------|---------|
| $f_{TWI,SCL}$   | Bit rates for TWI <sup>35</sup>                        | 100  |      | 400  | kbps    |
| $t_{TWI,START}$ | Time from STARTRX/STARTTX task to transmission started |      | 1.5  |      | $\mu$ s |

### 6.27.9.2 Two Wire Interface (TWI) timing specifications

| Symbol                    | Description                                                           | Min.  | Typ. | Max. | Units |
|---------------------------|-----------------------------------------------------------------------|-------|------|------|-------|
| $t_{TWI,SU\_DAT}$         | Data setup time before positive edge on SCL – all modes               | 300   |      |      | ns    |
| $t_{TWI,HD\_DAT}$         | Data hold time after negative edge on SCL – all modes                 | 500   |      |      | ns    |
| $t_{TWI,HD\_STA,100kbps}$ | TWI master hold time for START and repeated START condition, 100 kbps | 10000 |      |      | ns    |
| $t_{TWI,HD\_STA,250kbps}$ | TWI master hold time for START and repeated START condition, 250kbps  | 4000  |      |      | ns    |
| $t_{TWI,HD\_STA,400kbps}$ | TWI master hold time for START and repeated START condition, 400 kbps | 2500  |      |      | ns    |
| $t_{TWI,SU\_STO,100kbps}$ | TWI master setup time from SCL high to STOP condition, 100 kbps       | 5000  |      |      | ns    |
| $t_{TWI,SU\_STO,250kbps}$ | TWI master setup time from SCL high to STOP condition, 250 kbps       | 2000  |      |      | ns    |
| $t_{TWI,SU\_STO,400kbps}$ | TWI master setup time from SCL high to STOP condition, 400 kbps       | 1250  |      |      | ns    |
| $t_{TWI,BUF,100kbps}$     | TWI master bus free time between STOP and START conditions, 100 kbps  | 5800  |      |      | ns    |
| $t_{TWI,BUF,250kbps}$     | TWI master bus free time between STOP and START conditions, 250 kbps  | 2700  |      |      | ns    |
| $t_{TWI,BUF,400kbps}$     | TWI master bus free time between STOP and START conditions, 400 kbps  | 2100  |      |      | ns    |

Figure 158: TWI timing diagram, 1 byte transaction

## 6.28 TIMER — Timer/counter

This peripheral is a general purpose timer designed to keep track of time in user-selective time intervals, it can operate in two modes: timer and counter.

<sup>35</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see GPIO chapter for more details.

Figure 159: Block schematic for timer/counter

The timer/counter runs on the high-frequency clock source (HFCLK) and includes a four-bit (1/2X) prescaler that can divide the timer input clock from the HFCLK controller. Clock source selection between PCLK16M and PCLK1M is automatic according to TIMER base frequency set by the prescaler. The TIMER base frequency is always given as 16 MHz divided by the prescaler value.

The PPI system allows a TIMER event to trigger a task of any other system peripheral of the device. The PPI system also enables the TIMER task/event features to generate periodic output and PWM signals to any GPIO. The number of input/outputs used at the same time is limited by the number of GPIOTE channels.

TIMER can operate in two modes: Timer mode and Counter mode. In both modes, TIMER is started by triggering the START task, and stopped by triggering the STOP task. After the timer is stopped the timer can resume timing/counting by triggering the START task again. When timing/counting is resumed, the timer will continue from the value it had prior to being stopped.

In Timer mode, the TIMER's internal Counter register is incremented by one for every tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Block schematic for timer/counter](#) on page 445. The timer frequency is derived from PCLK16M as shown in the following example, using the values specified in the PRESCALER register.

$$f_{\text{TIMER}} = 16 \text{ MHz} / (2^{\text{PRESCALER}})$$

When  $f_{\text{TIMER}} \leq 1 \text{ MHz}$ , TIMER will use PCLK1M instead of PCLK16M for reduced power consumption.

In counter mode, the TIMER's internal Counter register is incremented by one each time the COUNT task is triggered, meaning the timer frequency and the prescaler are not utilized in counter mode. Similarly, the COUNT task has no effect in Timer mode.

The TIMER's maximum value is configured by changing the bit-width of the timer in register [BITMODE](#) on page 450.

[PRESCALER](#) on page 450 and [BITMODE](#) on page 450 must only be updated when the timer is stopped. If these registers are updated while the timer is started, unpredictable behavior may occur.

When the timer is incremented beyond its maximum value, the Counter register will overflow and the timer will automatically start over from zero.

The Counter register can be cleared by triggering the CLEAR task. This will explicitly set the internal value to zero.

TIMER implements multiple capture/compare registers.

Independent of prescaler setting, the accuracy of TIMER is equivalent to one tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Block schematic for timer/counter](#) on page 445.

### 6.28.1 Capture

TIMER implements one capture task for every available capture/compare register.

Every time the CAPTURE[n] task is triggered, the Counter value is copied to the CC[n] register.

### 6.28.2 Compare

TIMER implements one COMPARE event for every available capture/compare register.

A COMPARE event is generated when the Counter is incremented and then becomes equal to the value specified in one of the capture compare registers. When the Counter value becomes equal to the value specified in a capture compare register CC[n], the corresponding compare event COMPARE[n] is generated.

**BITMODE** on page 450 specifies how many bits of the Counter register and the capture/compare register that are used when the comparison is performed. Other bits will be ignored.

### 6.28.3 Task delays

After TIMER is started, the CLEAR, COUNT, and STOP tasks are guaranteed to take effect within one clock cycle of the PCLK16M.

### 6.28.4 Task priority

If the START task and the STOP task are triggered at the same time, meaning within the same period of PCLK16M, the STOP task will be prioritized.

### 6.28.5 Registers

| Base address | Peripheral | Instance | Description | Configuration                                     |
|--------------|------------|----------|-------------|---------------------------------------------------|
| 0x40008000   | TIMER      | TIMER0   | Timer 0     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x40009000   | TIMER      | TIMER1   | Timer 1     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x4000A000   | TIMER      | TIMER2   | Timer 2     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x4001A000   | TIMER      | TIMER3   | Timer 3     | This timer instance has 6 CC registers (CC[0..5]) |
| 0x4001B000   | TIMER      | TIMER4   | Timer 4     | This timer instance has 6 CC registers (CC[0..5]) |

Table 117: Instances

| Register    | Offset | Description                         |

## 6.28.6 Electrical specification

6.29 TWIM — I<sup>2</sup>C compatible two-wire interface master with EasyDMA

TWI master with EasyDMA (TWIM) is a two-wire half-duplex master which can communicate with multiple slave devices connected to the same bus.

Listed here are the main features for TWIM:

- I<sup>2</sup>C compatible
- Supported baud rates: 100, 250, 400 kbps
- Support for clock stretching (non I<sup>2</sup>C compliant)
- EasyDMA

The two-wire interface can communicate with a bi-directional wired-AND bus with two lines (SCL, SDA). The protocol makes it possible to interconnect up to 127 individually addressable devices. TWIM is not compatible with CBUS.

The GPIOs used for each two-wire interface line can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

Figure 160: TWI master with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see the following figure. This TWIM is only able to operate as a single master on the TWI bus. Multi-master bus configuration is not supported.

Figure 161: A typical TWI setup comprising one master and three slaves

This TWI master supports clock stretching performed by the slaves. The SCK pulse following a stretched clock cycle may be shorter than specified by the I2C specification.

The TWI master is started by triggering the STARTTX or STARTRX tasks, and stopped by triggering the STOP task. The TWI master will generate a STOPPED event when it has stopped following a STOP task.

After the TWI master is started, the STARTTX or STARTRX tasks should not be triggered again until the TWI master has issued a LASTRX, LASTTX, or STOPPED event.

The TWI master can be suspended using the SUSPEND task, this can be used when using the TWI master in a low priority interrupt context. When the TWIM enters suspend state, will automatically issue a SUSPENDED event while performing a continuous clock stretching until it is instructed to resume operation via a RESUME task. The TWI master cannot be stopped while it is suspended, thus the STOP task has to be issued after the TWI master has been resumed.

**Note:** Any ongoing byte transfer will be allowed to complete before the suspend is enforced. A SUSPEND task has no effect unless the TWI master is actively involved in a transfer.

If a NACK is clocked in from the slave, the TWI master will generate an ERROR event.

### 6.29.1 EasyDMA

The TWIM implements EasyDMA for accessing RAM without CPU involvement.

The TWIM peripheral implements the EasyDMA channels found in the following table.

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 119: TWIM EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 44.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.29.2 Master write sequence

A TWI master write sequence is started by triggering the STARTTX task. After the STARTTX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1).

The address must match the address of the slave device that the master wants to write to. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) generated by the slave.

After receiving the ACK bit, the TWI master will clock out the data bytes found in the transmit buffer located in RAM at the address specified in the TXD.PTR register. Each byte clocked out from the master will be followed by an ACK/NACK bit clocked in from the slave.

A typical TWI master write sequence is shown in the following figure. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect. This event can be used to synchronize the software.

The TWI master will generate a LASTTX event when it starts to transmit the last byte, this is shown in the following figure.

Figure 162: TWI master writing data to a slave

The TWI master is stopped by triggering the STOP task. This task should be triggered during the transmission of the last byte to secure that the TWI master will stop as fast as possible after sending the last byte. The shortcut between LASTTX and STOP can alternatively be used to accomplish this.

**Note:** The TWI master does not stop by itself when the entire RAM buffer has been sent, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

### 6.29.3 Master read sequence

A TWI master read sequence is started by triggering the STARTRX task. After the STARTRX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE = 0, READ = 1). The address must match the address of the slave device that the master wants to read from. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK = 1) generated by the slave.

After sending the ACK bit, the TWI slave will send data to the master using the clock generated by the master.

Data received will be stored in RAM at the address specified in the RXD.PTR register. The TWI master will generate an ACK after all but the last byte have been received from the slave. The TWI master will generate a NACK after the last byte received to indicate that the read sequence shall stop.

A typical TWI master read sequence is illustrated in [The TWI master reading data from a slave](#) on page 455. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect. This event can be used to synchronize the software.

The TWI master will generate a LASTRX event when it is ready to receive the last byte, as shown in [The TWI master reading data from a slave](#) on page 455. If RXD.MAXCNT > 1, the LASTRX event is generated after sending the ACK of the previously received byte. If RXD.MAXCNT = 1, the LASTRX event is generated after receiving the ACK following the address and READ bit.

The TWI master is stopped by triggering the STOP task. This task must be triggered before the NACK bit is supposed to be transmitted. The STOP task can be triggered at any time during the reception of the last byte. It is recommended to use the shortcut between LASTRX and STOP to accomplish this.

The TWI master does not stop by itself when the RAM buffer is full, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

The TWI master cannot be stopped while suspended, so the STOP task must be issued after the TWI master has been resumed.

Figure 163: The TWI master reading data from a slave

#### 6.29.4 Master repeated start sequence

A typical repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave. This example uses shortcuts to perform the simplest type of repeated start sequence, i.e. one write followed by one read. The same approach can be used to perform a repeated start sequence where the sequence is read followed by write.

The following figure shows an example of a repeated start sequence where the TWI master writes two bytes followed by reading four bytes from the slave.

Figure 164: Master repeated start sequence

If a more complex repeated start sequence is needed, and the TWI firmware driver is serviced in a low priority interrupt, it may be necessary to use the SUSPEND task and SUSPENDED event to guarantee that the correct tasks are generated at the correct time. A double repeated start sequence using the SUSPEND task to secure safe operation in low priority interrupts is shown in the following figure.

Figure 165: Double repeated start sequence

### 6.29.5 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

When the STOP task is sent, the software shall wait until the STOPPED event is received as a response before disabling the peripheral through the ENABLE register. If the peripheral is already stopped, the STOP task is not required.

### 6.29.6 Master mode pin configuration

The SCL and SDA signals associated with the TWI master are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI master is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL, PSEL.SDA must only be configured when the TWI master is disabled.

To secure correct signal levels on the pins used by the TWI master when the system is in OFF mode, and when the TWI master is disabled, these pins must be configured in the GPIO peripheral as described in the following table.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| TWI master signal | TWI master pin           | Direction | Output value   | Drive strength |
|-------------------|--------------------------|-----------|----------------|----------------|
| SCL               | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA               | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

Table 120: GPIO configuration before enabling peripheral

### 6.29.7 Registers

| Base address | Peripheral | Instance | Description                 | Configuration |
|--------------|------------|----------|-----------------------------|---------------|
| 0x40003000   | TWIM       | TWIM0    | Two-wire interface master 0 |               |
| 0x40004000   | TWIM       | TWIM1    | Two-wire interface master 1 |               |

Table 121: Instances

| Register         | Offset | Description                                                                 |
|------------------|--------|-----------------------------------------------------------------------------|
| TASKS_STARTRX    | 0x000  | Start TWI receive sequence                                                  |
| TASKS_STARTTX    | 0x008  | Start TWI transmit sequence                                                 |
| TASKS_STOP       | 0x014  | Stop TWI transaction. Must be issued while the TWI master is not suspended. |
| TASKS_SUSPEND    | 0x01C  | Suspend TWI transaction                                                     |
| TASKS_RESUME     | 0x020  | Resume TWI transaction                                                      |
| EVENTS_STOPPED   | 0x104  | TWI stopped                                                                 |
| EVENTS_ERROR     | 0x124  | TWI error                                                                   |
| EVENTS_SUSPENDED | 0x148  | SUSPEND task has been issued, TWI traffic is now suspended.                 |
| EVENTS_RXSTARTED | 0x14C  | Receive sequence started                                                    |
| EVENTS_TXSTARTED | 0x150  | Transmit sequence started                                                   |
| EVENTS_LASTRX    | 0x15C  | Byte boundary, starting to receive the last byte                            |
| EVENTS_LASTTX    | 0x160  | Byte boundary, starting to transmit the last byte                           |
| SHORTS           | 0x200  | Shortcuts between local events and tasks                                    |
| INTEN            | 0x300  | Enable or disable interrupt                                                 |
| INTENSET         | 0x304  | Enable interrupt                                                            |
| INTENCLR         | 0x308  | Disable interrupt                                                           |
| ERRORSRC         | 0x4C4  | Error source                                                                |
| ENABLE           | 0x500  | Enable TWIM                                                                 |
| PSEL_SCL         | 0x508  | Pin select for SCL signal                                                   |
| PSEL_SDA         | 0x50C  | Pin select for SDA signal                                                   |
| FREQUENCY        | 0x524  | TWI frequency. Accuracy depends on the HFCLK source selected.               |
| RXD_PTR          | 0x534  | Data pointer                                                                |
| RXD_MAXCNT       | 0x538  | Maximum number of bytes in receive buffer                                   |
| RXD_AMOUNT       | 0x53C  | Number of bytes transferred in the last transaction                         |
| RXD_LIST         | 0x540  | EasyDMA list type                                                           |
| TXD_PTR          | 0x544  | Data pointer                                                                |
| TXD_MAXCNT       | 0x548  | Maximum number of bytes in transmit buffer                                  |
| TXD_AMOUNT       | 0x54C  | Number of bytes transferred in the last transaction                         |
| TXD_LIST         | 0x550  | EasyDMA list type                                                           |
| ADDRESS          | 0x588  | Address used in the TWI transfer                                            |

     ## 6.29.8 Electrical specification

### 6.29.8.1 TWIM interface electrical specifications

| Symbol           | Description                                            | Min. | Typ. | Max. | Units |
|------------------|--------------------------------------------------------|------|------|------|-------|
| $f_{TWIM,SCL}$   | Bit rates for TWIM <sup>36</sup>                       | 100  |      | 400  | kbps  |
| $t_{TWIM,START}$ | Time from STARTRX/STARTTX task to transmission started |      | 1.5  |      | µs    |

### 6.29.8.2 Two Wire Interface Master (TWIM) timing specifications

| Symbol                     | Description                                                            | Min.   | Typ. | Max. | Units |
|----------------------------|------------------------------------------------------------------------|--------|------|------|-------|
| $t_{TWIM,SU\_DAT}$         | Data setup time before positive edge on SCL – all modes                | 300    |      |      | ns    |
| $t_{TWIM,HD\_DAT}$         | Data hold time after negative edge on SCL – 100, 250 and 400 kbps      | 500    |      |      | ns    |
| $t_{TWIM,HD\_STA,100kbps}$ | TWIM master hold time for START and repeated START condition, 100 kbps | 9937.5 |      |      | ns    |
| $t_{TWIM,HD\_STA,250kbps}$ | TWIM master hold time for START and repeated START condition, 250 kbps | 3937.5 |      |      | ns    |
| $t_{TWIM,HD\_STA,400kbps}$ | TWIM master hold time for START and repeated START condition, 400 kbps | 2437.5 |      |      | ns    |
| $t_{TWIM,SU\_STO,100kbps}$ | TWIM master setup time from SCL high to STOP condition, 100 kbps       | 5000   |      |      | ns    |
| $t_{TWIM,SU\_STO,250kbps}$ | TWIM master setup time from SCL high to STOP condition, 250 kbps       | 2000   |      |      | ns    |
| $t_{TWIM,SU\_STO,400kbps}$ | TWIM master setup time from SCL high to STOP condition, 400 kbps       | 1250   |      |      | ns    |
| $t_{TWIM,BUF,100kbps}$     | TWIM master bus free time between STOP and START conditions, 100 kbps  | 5800   |      |      | ns    |
| $t_{TWIM,BUF,250kbps}$     | TWIM master bus free time between STOP and START conditions, 250 kbps  | 2700   |      |      | ns    |
| $t_{TWIM,BUF,400kbps}$     | TWIM master bus free time between STOP and START conditions, 400 kbps  | 2100   |      |      | ns    |

<sup>36</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see [GPIO — General purpose input/output](#) on page 141 for more details.

Figure 166: TWIM timing diagram, 1 byte transaction

### 6.29.9 Pullup resistor

Figure 167: Recommended TWIM pullup value vs. line capacitance

- The I2C specification allows a line capacitance of 400 pF at most.
- The value of internal pullup resistor ( $R_{PU}$ ) for nRF52833 can be found in [GPIO — General purpose input/output](#) on page 141.

## 6.30 TWIS — I<sup>2</sup>C compatible two-wire interface slave with EasyDMA

TWI slave with EasyDMA (TWIS) is compatible with I<sup>2</sup>C operating at 100 kHz and 400 kHz. The TWI transmitter and receiver implement EasyDMA.

Figure 168: TWI slave with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see the following figure. TWIS is only able to operate with a single master on the TWI bus.

Figure 169: A typical TWI setup comprising one master and three slaves

The following figure shows the TWI slave state machine.

Figure 170: TWI slave state machine

The following table contains descriptions of the symbols used in the state machine.

| Symbol            | Type         | Description                                                                                                                    |
|-------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------|
| ENABLE            | Register     | The TWI slave has been enabled via the <a href="#">ENABLE</a> register.                                                        |
| PREPARETX         | Task         | The <a href="#">TASKS_PREPARETX</a> task has been triggered.                                                                   |
| STOP              | Task         | The <a href="#">TASKS_STOP</a> task has been triggered.                                                                        |
| PREPARERX         | Task         | The <a href="#">TASKS_PREPARERX</a> task has been triggered.                                                                   |
| STOPPED           | Event        | The <a href="#">EVENTS_STOPPED</a> event was generated.                                                                        |
| RXSTARTED         | Event        | The <a href="#">EVENTS_RXSTARTED</a> event was generated.                                                                      |
| TXSTARTED         | Event        | The <a href="#">EVENTS_TXSTARTED</a> event was generated.                                                                      |
| TX prepared       | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARETX</a> task has been triggered. This flag is not visible to the user. |
| RX prepared       | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARERX</a> task has been triggered. This flag is not visible to the user. |
| Unprepare TX      | Internal     | Clears the internal 'TX prepared' flag until next <a href="#">TASKS_PREPARETX</a> task.                                        |
| Unprepare RX      | Internal     | Clears the internal 'RX prepared' flag until next <a href="#">TASKS_PREPARERX</a> task.                                        |
| Stop condition    | TWI protocol | A TWI stop condition was detected.                                                                                             |
| Restart condition | TWI protocol | A TWI restart condition was detected.                                                                                          |

Table 123: TWI slave state machine symbols

The TWI slave can perform clock stretching, with the premise that the master is able to support it.

The TWI slave operates in a low power mode while waiting for a TWI master to initiate a transfer. As long as the TWI slave is not addressed, it will remain in this low power mode.

To secure correct behavior of the TWI slave, PSEL.SCL, PSEL.SDA, CONFIG, and the ADDRESS[n] registers must be configured prior to enabling the TWI slave through the ENABLE register. Similarly, changing these settings must be performed while the TWI slave is disabled. Failing to do so may result in unpredictable behavior.

### 6.30.1 EasyDMA

The TWIS implements EasyDMA for accessing RAM without CPU involvement.

The following table shows the Easy DMA channels that the TWIS peripheral implements.

| Channel | Type   | Register Cluster    |
|---------|--------|---------------------|
| TXD     | READER | <a href="#">TXD</a> |
| RXD     | WRITER | <a href="#">RXD</a> |

Table 124: TWIS EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 44.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.30.2 TWI slave responding to a read command

Before the TWI slave can respond to a read command, the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled, the TWI slave will be in its IDLE state. .

A read command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the TWI slave.

The TWI slave is able to listen for up to two addresses at the same time. This is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the read command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a READ event when it acknowledges the read command.

The TWI slave is only able to detect a read command from the IDLE state.

The TWI slave will set an internal 'TX prepared' flag when the PREPARETX task is triggered.

When the read command is received, the TWI slave will enter the TX state if the internal 'TX prepared' flag is set.

If the internal 'TX prepared' flag is not set when the read command is received, the TWI slave will stretch the master's clock until the PREPARETX task is triggered and the internal 'TX prepared' flag is set.

The TWI slave will generate the TXSTARTED event and clear the 'TX prepared' flag ('unprepare TX') when it enters the TX state. In this state the TWI slave will send the data bytes found in the transmit buffer to the master using the master's clock.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the TX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the 'TX prepared' flag ('unprepare TX') and go back to the IDLE state when it has stopped.

The transmit buffer is located in RAM at the address specified in the TXD.PTR register. The TWI slave will only be able to send TXD.MAXCNT bytes from the transmit buffer for each transaction. If the TWI master forces the slave to send more than TXD.MAXCNT bytes, the slave will send the byte specified in the ORC register to the master instead. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see TXD.PTR etc., are latched when the TXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the 'TX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 473.

Each byte sent from the slave will be followed by an ACK/NACK bit sent from the master. The TWI master will generate a NACK following the last byte that it wants to receive to tell the slave to release the bus so that the TWI master can generate the stop condition. The TXD.AMOUNT register can be queried after a transaction to see how many bytes were sent.

A typical TWI slave read command response is shown in the following figure. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

Figure 171: The TWI slave responding to a read command

### 6.30.3 TWI slave responding to a write command

Before the TWI slave can respond to a write command, the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled, the TWI slave will be in its IDLE state.

A write command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the slave.

The TWI slave is able to listen for up to two addresses at the same time. This is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the write command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a WRITE event if it acknowledges the write command.

The TWI slave is only able to detect a write command from the IDLE state.

The TWI slave will set an internal 'RX prepared' flag when the PREPARERX task is triggered.

When the write command is received, the TWI slave will enter the RX state if the internal 'RX prepared' flag is set.

If the internal 'RX prepared' flag is not set when the write command is received, the TWI slave will stretch the master's clock until the PREPARERX task is triggered and the internal 'RX prepared' flag is set.

The TWI slave will generate the RXSTARTED event and clear the internal 'RX prepared' flag ('unprepare RX') when it enters the RX state. In this state, the TWI slave will be able to receive the bytes sent by the TWI master.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the RX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the internal 'RX prepared' flag ('unprepare RX') and go back to the IDLE state when it has stopped.

The receive buffer is located in RAM at the address specified in the RXD.PTR register. The TWI slave will only be able to receive as many bytes as specified in the RXD.MAXCNT register. If the TWI master tries to send more bytes to the slave than it can receive, the extra bytes are discarded and NACKed by the slave. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see RXD.PTR etc., are latched when the RXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the internal 'RX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 473.

The TWI slave will generate an ACK after every byte received from the master. The RXD.AMOUNT register can be queried after a transaction to see how many bytes were received.

A typical TWI slave write command response is shown in the following figure. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

Figure 172: The TWI slave responding to a write command

### 6.30.4 Master repeated start sequence

An example of a repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave.

This is illustrated in the following figure.

In this example, the receiver does not know what the master wants to read in advance. This information is in the first two received bytes of the write in the repeated start sequence. To guarantee that the CPU is able to process the received data before the TWI slave starts to reply to the read command, the SUSPEND task is triggered via a shortcut from the READ event generated when the read command is received. When the CPU has processed the incoming data and prepared the correct data response, the CPU will resume the transaction by triggering the RESUME task.

Figure 173: Repeated start sequence

### 6.30.5 Terminating an ongoing TWI transaction

In some situations, e.g. if the external TWI master is not responding correctly, it may be required to terminate an ongoing transaction.

This can be achieved by triggering the STOP task. In this situation, a STOPPED event will be generated when the TWI has stopped independent of whether or not a STOP condition has been generated on the TWI bus. The TWI slave will release the bus when it has stopped and go back to its IDLE state.

### 6.30.6 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

### 6.30.7 Slave mode pin configuration

The SCL and SDA signals associated with the TWI slave are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI slave is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL and PSEL.SDA must only be configured when the TWI slave is disabled.

To secure correct signal levels on the pins used by the TWI slave when the system is in OFF mode, and when the TWI slave is disabled, these pins must be configured in the GPIO peripheral as described in the following table.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| TWI slave signal | TWI slave pin            | Direction | Output value   | Drive strength |
|------------------|--------------------------|-----------|----------------|----------------|
| SCL              | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA              | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

Table 125: GPIO configuration before enabling peripheral

### 6.30.8 Registers

| Base address | Peripheral | Instance | Description                | Configuration |
|--------------|------------|----------|----------------------------|---------------|
| 0x40003000   | TWIS       | TWIS0    | Two-wire interface slave 0 |               |
| 0x40004000   | TWIS       | TWIS1    | Two-wire interface slave 1 |               |

Table 126: Instances

| Register         | Offset | Description                                         |
|------------------|--------|-----------------------------------------------------|
| TASKS_STOP       | 0x014  | Stop TWI transaction                                |
| TASKS_SUSPEND    | 0x01C  | Suspend TWI transaction                             |
| TASKS_RESUME     | 0x020  | Resume TWI transaction                              |
| TASKS_PREPARERX  | 0x030  | Prepare the TWI slave to respond to a write command |
| TASKS_PREPARETX  | 0x034  | Prepare the TWI slave to respond to a read command  |
| EVENTS_STOPPED   | 0x104  | TWI stopped                                         |
| EVENTS_ERROR     | 0x124  | TWI error                                           |
| EVENTS_RXSTARTED | 0x14C  | Receive sequence started                            |
| EVENTS_TXSTARTED | 0x150  | Transmit sequence started                           |
| EVENTS_WRITE     | 0x164  | Write command received                              |
| EVENTS_READ      | 0x168  | Read command received                               |
| SHORTS           | 0x200  | Shortcuts between local events and tasks            |
| INTEN            | 0x300  | Enable or disable interrupt                         |
| INTENSET         | 0x304  | Enable interrupt                                    |
| INTENCLR         | 0x308  | Disable interrupt                                   |

| Register   | Offset | Description                                                                             |
|------------|--------|-----------------------------------------------------------------------------------------|
| ERRORSRC   | 0x4D0  | Error source                                                                            |
| MATCH      | 0x4D4  | Status register indicating which address had a match                                    |
| ENABLE     | 0x500  | Enable TWIS                                                                             |

## 6.30.9 Electrical specification

### 6.30.9.1 TWIS slave timing specifications

| Symbol                     | Description                                                                 | Min. | Typ. | Max. | Units   |
|----------------------------|-----------------------------------------------------------------------------|------|------|------|---------|
| $f_{TWIS,SCL}$             | Bit rates for TWIS <sup>37</sup>                                            | 100  |      | 400  | kbps    |
| $t_{TWIS,START}$           | Time from PREPARERX/PREPARETX task to ready to receive/transmit             |      | 1.5  |      | $\mu$ s |
| $t_{TWIS,SU\_DAT}$         | Data setup time before positive edge on SCL – all modes                     | 300  |      |      | ns      |
| $t_{TWIS,HD\_DAT}$         | Data hold time after negative edge on SCL – all modes                       | 500  |      |      | ns      |
| $t_{TWIS,HD\_STA,100kbps}$ | TWI slave hold time from for START condition (SDA low to SCL low), 100 kbps | 5200 |      |      | ns      |
| $t_{TWIS,HD\_STA,400kbps}$ | TWI slave hold time from for START condition (SDA low to SCL low), 400 kbps | 1300 |      |      | ns      |
| $t_{TWIS,SU\_STO,100kbps}$ | TWI slave setup time from SCL high to STOP condition, 100 kbps              | 5200 |      |      | ns      |

<sup>37</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see [GPIO](#) chapter for more details.

| Symbol                                   | Description                                                         | Min. | Typ. | Max. | Units |
|------------------------------------------|---------------------------------------------------------------------|------|------|------|-------|
| $t_{\text{TWIS,SU\_STO},400\text{kbps}}$ | TWI slave setup time from SCL high to STOP condition, 400 kbps      | 1300 |      |      | ns    |
| $t_{\text{TWIS,BUF},100\text{kbps}}$     | TWI slave bus free time between STOP and START conditions, 100 kbps |      | 4700 |      | ns    |
| $t_{\text{TWIS,BUF},400\text{kbps}}$     | TWI slave bus free time between STOP and START conditions, 400 kbps |      | 1300 |      | ns    |

Figure 174: TWIS timing diagram, 1 byte transaction

## 6.31 UART — Universal asynchronous receiver/transmitter

Figure 175: UART configuration

### 6.31.1 Functional description

Listed here are the main features of UART.

The UART implements support for the following features:

- Full-duplex operation
- Automatic flow control
- Parity checking and generation for the 9<sup>th</sup> data bit

As illustrated in [UART configuration](#) on page 485, the UART uses the TXD and RXD registers directly to transmit and receive data. The UART uses one stop bit.

**Note:** The external crystal oscillator must be enabled to obtain sufficient clock accuracy for stable communication. See [CLOCK — Clock control](#) on page 82 for more information.

### 6.31.2 Pin configuration

The different signals RXD, CTS (Clear To Send, active low), RTS (Request To Send, active low), and TXD associated with the UART are mapped to physical pins according to the configuration specified in the PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers respectively.

If the CONNECT field of a PSEL.xxx register is set to Disconnected, the associated UART signal will not be connected to any physical pin. The PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers and their configurations are only used as long as the UART is enabled, and retained only for the duration the device is in ON mode. PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD must only be configured when the UART is disabled.

To secure correct signal levels on the pins by the UART when the system is in OFF mode, the pins must be configured in the GPIO peripheral as described in [Pin configuration](#) on page 486.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| UART pin | Direction | Output value   |
|----------|-----------|----------------|
| RXD      | Input     | Not applicable |
| CTS      | Input     | Not applicable |
| RTS      | Output    | 1              |
| TXD      | Output    | 1              |

Table 128: GPIO configuration

### 6.31.3 Shared resources

The UART shares registers and resources with other peripherals that have the same ID as the UART.

All peripherals with the same ID as the UART must be disabled before configuring and using the UART. Disabling a peripheral that has the same ID as the UART will not reset any of the registers that are shared with the UART. It is therefore important to configure all relevant UART registers explicitly to ensure that it operates correctly.

See [Instantiation](#) on page 22 for details on peripherals and their IDs.

### 6.31.4 Transmission

A UART transmission sequence is started by triggering the STARTTX task.

Bytes are transmitted by writing to the TXD register. When a byte has been successfully transmitted, the UART will generate a TXDRDY event after which a new byte can be written to the TXD register. A UART transmission sequence is stopped immediately by triggering the STOPTH task.

If flow control is enabled, a transmission will be automatically suspended when CTS is deactivated, and resumed when CTS is activated again, as shown in the following figure. A byte that is in transmission when CTS is deactivated will be fully transmitted before the transmission is suspended. For more information, see [Suspending the UART](#) on page 488.

Figure 176: UART transmission

### 6.31.5 Reception

A UART reception sequence is started by triggering the STARTRX task.

The UART receiver chain implements a FIFO capable of storing six incoming RXD bytes before data is overwritten. Bytes are extracted from this FIFO by reading the RXD register. When a byte is extracted from the FIFO, a new byte pending in the FIFO will be moved to the RXD register. The UART will generate an RXDRDY event every time a new byte is moved to the RXD register.

When flow control is enabled, the UART will deactivate the RTS signal when there is only space for four more bytes in the receiver FIFO. The counterpart transmitter is therefore able to send up to four bytes after the RTS signal is deactivated before data is being overwritten. To prevent overwriting data in the FIFO, the counterpart UART transmitter must therefore make sure to stop transmitting data within four bytes after the RTS line is deactivated.

The RTS signal will first be activated again when the FIFO has been emptied, that is, when all bytes in the FIFO have been read by the CPU, see [UART reception](#) on page 488.

The RTS signal will also be deactivated when the receiver is stopped through the STOPRX task as illustrated in [UART reception](#) on page 488. The UART is able to receive four to five additional bytes if they are sent in succession immediately after the RTS signal has been deactivated. This is possible because the UART is, even after the STOPRX task is triggered, able to receive bytes for an extended period of time dependent on the configured baud rate. The UART will generate a receiver timeout event (RXTO) when this period has elapsed.

To prevent loss of incoming data, the RXD register must only be read one time following every RXDRDY event.

To secure that the CPU can detect all incoming RXDRDY events through the RXDRDY event register, the RXDRDY event register must be cleared before the RXD register is read. The reason for this is that the UART is allowed to write a new byte to the RXD register, and can generate a new event immediately after the RXD register is read (emptied) by the CPU.

Figure 177: UART reception

As indicated in occurrence 2 in the figure, the RXDRDY event associated with byte B is generated first after byte A has been extracted from RXD.

### 6.31.6 Suspending the UART

The UART can be suspended by triggering the SUSPEND task.

SUSPEND will affect both the UART receiver and the UART transmitter, i.e. the transmitter will stop transmitting and the receiver will stop receiving. UART transmission and reception can be resumed, after being suspended, by triggering STARTTX and STARTRX respectively.

Following a SUSPEND task, an ongoing TXD byte transmission will be completed before the UART is suspended.

When the SUSPEND task is triggered, the UART receiver will behave in the same way as it does when the STOPRX task is triggered.

### 6.31.7 Error conditions

An ERROR event, in the form of a framing error, will be generated if a valid stop bit is not detected in a frame. Another ERROR event, in the form of a break condition, will be generated if the RXD line is held active low for longer than the length of a data frame. Effectively, a framing error is always generated before a break condition occurs.

### 6.31.8 Using the UART without flow control

If flow control is not enabled, the interface will behave as if the CTS and RTS lines are kept active all the time.

### 6.31.9 Parity and stop bit configuration

Automatic even parity generation for both transmission and reception can be configured using the register [CONFIG](#) on page 497. If odd parity is desired, it can be configured using the register [CONFIG](#) on page 497. See the register description for details.

The amount of stop bits can also be configured through the register [CONFIG](#) on page 497.

### 6.31.10 Registers

| Base address | Peripheral | Instance | Description                                 | Configuration |
|--------------|------------|----------|---------------------------------------------|---------------|
| 0x40002000   | UART       | UART0    | Universal asynchronous receiver/transmitter | Deprecated    |

Table 129: Instances

| Register      | Offset | Description                                               |
|---------------|--------|-----------------------------------------------------------|
| TASKS_STARTRX | 0x000  | Start UART receiver                                       |

 ## 6.31.11 Electrical specification

### 6.31.11.1 UART electrical specification

| Symbol                  | Description                                            | Min. | Typ. | Max. | Units |
|-------------------------|--------------------------------------------------------|------|------|------|-------|
| f <sub>UART</sub>       | Baud rate for UART <sup>38</sup> .                     |      |      | 1000 | kbps  |
| t <sub>UART,CTSH</sub>  | CTS high time                                          | 1    |      |      | μs    |
| t <sub>UART,START</sub> | Time from STARTRX/STARTTX task to transmission started |      | 1    |      | μs    |

<sup>38</sup> High baud rates may require GPIOs to be set as High Drive, see [GPIO](#) for more details.

## 6.32 UARTE — Universal asynchronous receiver/transmitter with EasyDMA

The Universal asynchronous receiver/transmitter with EasyDMA (UARTE) offers fast, full-duplex, asynchronous serial communication with built-in flow control (CTS, RTS) support in hardware at a rate up to 1 Mbps, and EasyDMA data transfer from/to RAM.

Listed here are the main features for UARTE:

- Full-duplex operation
- Automatic hardware flow control
- Optional even parity bit checking and generation
- EasyDMA
- Up to 1 Mbps baudrate
- Return to IDLE between transactions supported (when using HW flow control)
- One or two stop bit
- Least significant bit (LSB) first

Figure 178: UARTE configuration

The GPIOs used for each UART interface can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

**Note:** The external crystal oscillator must be enabled to obtain sufficient clock accuracy for stable communication. See [CLOCK — Clock control](#) on page 82 for more information.

### 6.32.1 EasyDMA

The UARTE implements EasyDMA for reading and writing to and from the RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 19 for more information about the different memory regions.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The ENDRX and ENDTX events indicate that the EasyDMA is finished accessing the RX or TX buffer in RAM.

### 6.32.2 Transmission

The first step of a DMA transmission is storing bytes in the transmit buffer and configuring EasyDMA. This is achieved by writing the initial address pointer to TXD.PTR, and the number of bytes in the RAM buffer to TXD.MAXCNT. The UARTe transmission is started by triggering the STARTTX task.

After each byte has been sent over the TXD line, a TXDRDY event will be generated.

When all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have been transmitted, the UARTe transmission will end automatically and an ENDTX event will be generated.

A UARTe transmission sequence is stopped by triggering the STOPTX task. A TXSTOPPED event will be generated when the UARTe transmitter has stopped.

If the ENDTX event has not already been generated when the UARTe transmitter has come to a stop, the UARTe will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

If flow control is enabled through the HWFC field in the CONFIG register, a transmission will be automatically suspended when CTS is deactivated and resumed when CTS is activated again, as shown in the following figure. A byte that is in transmission when CTS is deactivated will be fully transmitted before the transmission is suspended.

Figure 179: UARTe transmission

The UARTe transmitter will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTTX or after it has been stopped via STOPTX and the TXSTOPPED event has been generated. See [POWER — Power supply](#) on page 61 for more information about power modes.

### 6.32.3 Reception

The UARTe receiver is started by triggering the STARTRX task. The UARTe receiver is using EasyDMA to store incoming data in an RX buffer in RAM.

The RX buffer is located at the address specified in the RXD.PTR register. The RXD.PTR register is double-buffered and it can be updated and prepared for the next STARTRX task immediately after the RXSTARTED event is generated. The size of the RX buffer is specified in the RXD.MAXCNT register. The UARTe generates an ENDRX event when it has filled up the RX buffer, as seen in the following figure.

For each byte received over the RXD line, an RXDRDY event will be generated. This event is likely to occur before the corresponding data has been transferred to Data RAM.

The RXD.AMOUNT register can be queried following an ENDRX event to see how many new bytes have been transferred to the RX buffer in RAM since the previous ENDRX event.

Figure 180: UARTe reception

The UARTe receiver is stopped by triggering the STOPRX task. An RXTO event is generated when the UARTe has stopped. The UARTe will make sure that an impending ENDRX event will be generated before the RXTO event is generated. This means that the UARTe will guarantee that no ENDRX event will be generated after RXTO, unless the UARTe is restarted or a FLUSHRX command is issued after the RXTO event is generated.

**Note:** If the ENDRX event has not been generated when the UARTe receiver stops, indicating that all pending content in the RX FIFO has been moved to the RX buffer, the UARTe will generate the ENDRX event explicitly even though the RX buffer is not full. In this scenario the ENDRX event will be generated before the RXTO event is generated.

To determine the amount of bytes the RX buffer has received, the CPU can read the RXD.AMOUNT register following the ENDRX event or the RXTO event.

The UARTe is able to receive up to four bytes after the STOPRX task has been triggered, as long as these are sent in succession immediately after the RTS signal is deactivated. After the RTS is deactivated, the UART is able to receive bytes for a period of time equal to the time needed to send four bytes on the configured baud rate.

After the RXTO event is generated the internal RX FIFO may still contain data, and to move this data to RAM the FLUSHRX task must be triggered. To make sure that this data does not overwrite data in the RX buffer, the RX buffer should be emptied or the RXD.PTR should be updated before the FLUSHRX task is triggered. To make sure that all data in the RX FIFO is moved to the RX buffer, the RXD.MAXCNT register must be set to RXD.MAXCNT > 4, as seen in the following figure. The UARTe will generate the ENDRX event after completing the FLUSHRX task even if the RX FIFO was empty or if the RX buffer does not get filled up.

To be able to know how many bytes have actually been received into the RX buffer in this case, the CPU can read the RXD.AMOUNT register following the ENDRX event.

Figure 181: UARTe reception with forced stop via STOPRX

If HW flow control is enabled through the HWFC field in the CONFIG register, the RTS signal will be deactivated when the receiver is stopped via the STOPRX task or when the UARTe is only able to receive four more bytes in its internal RX FIFO.

With flow control disabled, the UARTe will function in the same way as when the flow control is enabled except that the RTS line will not be used. This means that no signal will be generated when the UARTe has reached the point where it is only able to receive four more bytes in its internal RX FIFO. Data received when the internal RX FIFO is filled up, will be lost.

The UARTe receiver will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTRX or after it has been stopped via STOPRX and the RXTO event has been generated. See [POWER — Power supply](#) on page 61 for more information about power modes.

### 6.32.4 Error conditions

An ERROR event, in the form of a framing error, will be generated if a valid stop bit is not detected in a frame. Another ERROR event, in the form of a break condition, will be generated if the RXD line is held active low for longer than the length of a data frame. Effectively, a framing error is always generated before a break condition occurs.

An ERROR event will not stop reception. If the error was a parity error, the received byte will still be transferred into Data RAM, and so will following incoming bytes. If there was a framing error (wrong stop bit), that specific byte will NOT be stored into Data RAM, but following incoming bytes will.

### 6.32.5 Using the UARTe without flow control

If flow control is not enabled, the interface will behave as if the CTS and RTS lines are kept active all the time.

### 6.32.6 Parity and stop bit configuration

Automatic even parity generation for both transmission and reception can be configured using the register [CONFIG](#) on page 515. If odd parity is desired, it can be configured using the register [CONFIG](#) on page 515. See the register description for details.

The amount of stop bits can also be configured through the register [CONFIG](#) on page 515.

### 6.32.7 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOPTX and STOPRX tasks may not be always needed (the peripheral might already be stopped), but if STOPTX and/or STOPRX is sent, software shall wait until the TXSTOPPED and/or RXTO event is received in response, before disabling the peripheral through the ENABLE register.

### 6.32.8 Pin configuration

The different signals RXD, CTS (Clear To Send, active low), RTS (Request To Send, active low), and TXD associated with the UARTE are mapped to physical pins according to the configuration specified in the PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers respectively.

The PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers and their configurations are only used as long as the UARTE is enabled, and retained only for the duration the device is in ON mode. PSEL.RXD, PSEL.RTS, PSEL.RTS, and PSEL.TXD must only be configured when the UARTE is disabled.

To secure correct signal levels on the pins by the UARTE when the system is in OFF mode, the pins must be configured in the GPIO peripheral as described in the following table.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| UARTE signal | UARTE pin                | Direction | Output value   |
|--------------|--------------------------|-----------|----------------|
| RXD          | As specified in PSEL.RXD | Input     | Not applicable |
| CTS          | As specified in PSEL.CTS | Input     | Not applicable |
| RTS          | As specified in PSEL.RTS | Output    | 1              |
| TXD          | As specified in PSEL.TXD | Output    | 1              |

Table 131: GPIO configuration before enabling peripheral

### 6.32.9 Registers

| Base address | Peripheral | Instance | Description                                                      | Configuration |
|--------------|------------|----------|------------------------------------------------------------------|---------------|
| 0x40002000   | UARTE      | UARTE0   | Universal asynchronous receiver/transmitter with EasyDMA, unit 0 |               |
| 0x40028000   | UARTE      | UARTE1   | Universal asynchronous receiver/transmitter with EasyDMA, unit 1 |               |

Table 132: Instances

| Register         | Offset | Description                                                            |
|------------------|--------|------------------------------------------------------------------------|
| TASKS_STARTRX    | 0x000  | Start UART receiver                                                    |
| TASKS_STOPRX     | 0x004  | Stop UART receiver                                                     |
| TASKS_STARTTX    | 0x008  | Start UART transmitter                                                 |
| TASKS_STOPTX     | 0x00C  | Stop UART transmitter                                                  |
| TASKS_FLUSHRX    | 0x02C  | Flush RX FIFO into RX buffer                                           |
| EVENTS_CTS       | 0x100  | CTS is activated (set low). Clear To Send.                             |
| EVENTS_NCTS      | 0x104  | CTS is deactivated (set high). Not Clear To Send.                      |
| EVENTS_RXDRDY    | 0x108  | Data received in RXD (but potentially not yet transferred to Data RAM) |
| EVENTS_ENDRX     | 0x110  | Receive buffer is filled up                                            |
| EVENTS_TXDRDY    | 0x11C  | Data sent from TXD                                                     |
| EVENTS_ENDTX     | 0x120  | Last TX byte transmitted                                               |
| EVENTS_ERROR     | 0x124  | Error detected                                                         |
| EVENTS_RXTO      | 0x144  | Receiver timeout                                                       |
| EVENTS_RXSTARTED | 0x14C  | UART receiver has started                                              |
| EVENTS_TXSTARTED | 0x150  | UART transmitter has started                                           |
| EVENTS_TXSTOPPED | 0x158  | Transmitter stopped                                                    |

| Register   | Offset | Description                                               |
|------------|--------|-----------------------------------------------------------|
| SHORTS     | 0x200  | Shortcuts between local events and tasks                  |
| INTEN      | 0x300  | Enable or disable interrupt                               |
| INTENSET   | 0x304  | Enable interrupt                                          |
| INTENCLR   | 0x308  | Disable interrupt                                         |
| ERRORSRC   | 0x480  | Error source                                              |
|            |        | This register is read/write one to clear.                 |
| ENABLE     | 0x500  | Enable UART                                               |
| PSEL.RTS   | 0x508  | Pin select for RTS signal                                 |
| PSEL.TXD   | 0x50C  | Pin select for TXD signal                                 |
| PSEL.CTS   | 0x510  | Pin select for CTS signal                                 |
| PSEL.RXD   | 0x514  | Pin select for RXD signal                                 |
| BAUDRATE   | 0x524  | Baud rate. Accuracy depends on the HFCLK source selected. |
| RXD.PTR    | 0x534  | Data pointer                                              |
| RXD.MAXCNT | 0x538  | Maximum number of bytes in receive buffer                 |
| RXD.AMOUNT | 0x53C  | Number of bytes transferred in the last transaction       |
| TXD.PTR    | 0x544  | Data pointer                                              |
| TXD.MAXCNT | 0x548  | Maximum number of bytes in transmit buffer                |
| TXD.AMOUNT | 0x54C  | Number of bytes transferred in the last transaction       |
| CONFIG     | 0x56C  | Configuration of parity and hardware flow control         |

## 6.32.10 Electrical specification

### 6.32.10.1 UARTE electrical specification

| Symbol            | Description                                            | Min. | Typ. | Max. | Units   |
|-------------------|--------------------------------------------------------|------|------|------|---------|
| $f_{UARTE}$       | Baud rate for UARTE <sup>39</sup> .                    |      |      | 1000 | kbps    |
| $t_{UARTE,CTSH}$  | CTS high time                                          | 1    |      |      | $\mu$ s |
| $t_{UARTE,START}$ | Time from STARTRX/STARTTX task to transmission started |      | 1    |      | $\mu$ s |

## 6.33 USB — Universal serial bus device

The USB device (USB\_D) controller implements a full speed USB device function that meets 2.0 revision of the USB specification.

<sup>39</sup> High baud rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

Figure 182: USB device block diagram

Listed here are the main features for USB:

- Full-speed (12 Mbps) device fully compliant to [Universal Serial Bus Specification Revision 2.0](#), including following engineering change notices (ECNs) issued by USB Implementers Forum:
  - *Pull-up/pull-down Resistors ECN*
  - *5V Short Circuit Withstand Requirement Change ECN*
- USB device stack available in the Nordic SDK
- Integrated (on-chip) USB transceiver (PHY)
- Software controlled on-chip pull-up on D+
- Endpoints:
  - Two control (1 IN, 1 OUT)
  - 14 bulk/interrupt (7 IN, 7 OUT)
  - Two isochronous (1 IN, 1 OUT)
- Double buffering for isochronous (ISO) endpoints (IN/OUT) support
- USB suspend, resume, and remote wake-up support
- 64 bytes buffer size for each bulk/interrupt endpoint
- Up to 1023 bytes buffer size for ISO endpoints
- EasyDMA for all data transfers

### 6.33.1 USB device states

The behavior of a USB device can be modelled through a state diagram.

The *USB 2.0 Specification* (see *Chapter 9 USB Device Framework*) defines a number of states for a USB device, as shown in the following figure.

Figure 183: Device state diagram

The device must change state according to host-initiated traffic and USB bus states. It is up to the software to implement a state machine that matches the above definition. To detect the presence or absence of USB supply (VBUS), two events USBDETECTED and USBREMOVED can be used to implement the state machine. For more details on these events, see [USB supply](#) on page 66.

As a general rule when implementing the software, the host behavior shall never be assumed to be predictable. In particular the sequence of commands received during an enumeration. The software shall always react to the current bus conditions or commands sent by the host.

### 6.33.2 USB terminology

The USB specification defines bus states, rather than logic levels on the D+ and D- lines.

For a full speed device, the bus state where the D+ line is high and the D- line is low is defined as the J state. The bus state where D+ is low and D- high is called the K state.

An idle bus, where D+ and D- lines are only polarized through the pull-up on D+ and pull-downs on the host side, will be in J state.

Both lines low are called SE0 (single-ended 0), and both lines high SE1 (single-ended 1).

### 6.33.3 USB pins

The USBD peripheral features a number of dedicated pins.

The dedicated USB pins can be grouped in two categories, signal and power. The signal pins consist of the D+ and D- pins, which are to be connected to the USB host. They are dedicated pins, and not available as standard GPIOs. The USBD peripheral is implemented according to the USB specification revision 2.0, *5V Short Circuit Withstand ECN Requirement Change*, meaning these two pins are not 5 V tolerant.

The signal pins and the pull-up will operate only while VBUS is in its valid voltage range, and USBD is enabled through the **ENABLE** register. For details on the USB power supply and VBUS detection, see [USB supply](#) on page 66.

For more information about the pinout, see [Pin assignments](#) on page 560.

### 6.33.4 USBD power-up sequence

The physical layer interface (PHY)/USB transceiver is powered separately from the rest of the device (VBUS pin), which has some implications on the USBD power-up sequence.

The device is not able to properly signal its presence to the USB host and handle traffic from the host, unless the PHY's power supply is enabled and stable. Turning the PHY's power supply on/off is directly linked to register **ENABLE**. The device provides events that help synchronizing software to the various steps during the power-up sequence.

To make sure that all resources in USBD are available and the dedicated USB voltage regulator stabilized, the following is recommended:

- Enable USBD only after VBUS has been detected
- Turn the USB pull-up on after the following events have occurred:
  - USBPWRRDY
  - USBEVENT, with the READY condition flagged in **EVENTCAUSE**

The following sequence chart illustrates a typical handling of VBUS power-up:

Figure 184: VBUS power-up sequence

Upon detecting VBUS removal, it is recommended to wait for ongoing EasyDMA transfers to finish before disabling USBD (relevant ENDEPIN[n], ENDISOIN, ENDEPOUT[n], or ENDISOOUT events, see [EasyDMA](#) on page 521). The USBREMOVED event, described in [USB supply](#) on page 66, signals when the VBUS is removed. Reading the **ENABLE** register will return Enabled until USBD is completely disabled.

### 6.33.5 USB pull-up

The USB pull-up serves two purposes: it indicates to the host that the device is connected to the USB bus, and it indicates the device's speed capability.

When no pull-up is connected to the USB bus, the host sees both D+ and D- lines low, as they are pulled down on the host side by 15 k $\Omega$  resistors. The device is not detected by the host, putting it in a detached state even if it is physically connected to the host. In this situation, the device is not allowed to draw current from VBUS, according to *USB 2.0 Specification*.

When a full-speed device connects its 1.5 k $\Omega$  pull-up to D+, the host sees the corresponding line high. The device is then in the attached state. During the enumeration process, the host attempts to determine if the full-speed device also supports higher speeds and initiates communication with the device to further identify it. The USB peripheral implemented in this device supports only full-speed operation (12 Mbps), and thus ignores the negotiation for higher speeds in accordance with *USB 2.0 Specification*.

Register **USBPULLUP** enables software to connect or disconnect the pull-up on D+. This allows the software to control when USB enumeration takes place. It also allows to emulate a physical disconnect from the USB bus, for instance when re-enumeration is required. **USBPULLUP** has to be enabled to allow the USB peripheral to handle USB traffic and generate appropriate events. This forbids the use of an external pull-up.

Note that disconnecting the pull-up through register **USBPULLUP** while connected to a host, will result in both D+ and D- lines to be pulled low by the host's pull-down resistors. However, as mentioned above, this will also inhibit the generation of the USBRESET event. The pull-up is disabled by default after a chip reset.

The pull-up shall only get connected after USB peripheral has been enabled through register **ENABLE**. The USB pull-up value is automatically changed depending on the bus activity, as specified in *Resistor ECN* which amends the original *USB 2.0 Specification*. The user does not have access to this function as it is handled in hardware.

While they should never be used in normal traffic activity, lines D+ and D- may at any time be forced into state specified in register **DPDMVALUE** by the task DPDMNODRIVE. The DPDMNODRIVE task stops driving them, and PHY returns to normal operation.

### 6.33.6 USB reset

The USB specification defines a USB reset, which is not to be confused with a chip reset. The USB reset is a normal USB bus condition, and is used as part of the enumeration sequence, it does not reset the chip.

The USB reset results from a single-ended low state (SE0) on lines D+/D- for a  $t_{\text{USB,DETRST}}$  amount of time. Only the host is allowed to drive a USB reset condition on the bus. The USB peripheral automatically interprets a SE0 longer than  $t_{\text{USB,DETRST}}$  as a USB reset. When the device detects a USB reset and generates a USBRESET event, the device USB stack and related parts of the application shall re-initialize themselves, and go back to the default state.

Some of the registers in the USB peripheral get automatically reset to a known state, in particular all data endpoints are disabled and the **USBADDR** reset to 0.

After the device has connected to the USB bus (i.e. after VBUS is applied), the device shall not respond to any traffic from the time the pull-up is enabled until it has seen a USB reset condition. This is automatically ensured by the USB peripheral.

After a USB reset, the device shall be fully responsive after at most  $T_{\text{RSTRCY}}$  (according to chapter 7 in the USB specification). Software shall take into account this time that takes the hardware to recover from a USB reset condition.

### 6.33.7 USB suspend and resume

Normally, the host will maintain activity on the USB at least every millisecond according to USB specification. A USB device will enter suspend when there is no activity on the bus (idle) for a given time. The device will resume operation when it receives any non idle signalling.

To signal that the device shall go into low power mode (suspend), the host stops activity on the USB bus, which becomes idle. Only the device pull-up and host pull-downs act on D+ and D-, and the bus is thus kept at a constant J state. It is up to the device to detect this lack of activity, and enter the low power mode (suspend) within a specified time.

The USB host can decide to suspend or resume USB activity at any time. If remote wake-up is enabled, the device may signal to the host to resume from suspend.

#### 6.33.7.1 Entering suspend

The USB peripheral automatically detects lack of activity for more than a defined amount of time, and performs steps needed to enter suspend.

When no activity has been detected for longer than  $t_{\text{USB,SUSPEND}}$ , the USB peripheral generates the USBEVENT event with SUSPEND bit set in register **EVENTCAUSE**. The software shall ensure that the current drawn from the USB supply line VBUS is within the specified limits before  $T_{2\text{SUSP}}$ , as defined in chapter 7 of the USB specification. In order to reduce idle current of USB peripheral, the software must explicitly place the USB peripheral in low power mode through writing **LowPower** to register **LOWPOWER**.

In order to save power, and provided that no other peripheral needs it, the crystal oscillator (HFXO) in **CLOCK** may be disabled by software during the USB suspend, while the USB pull-up is disconnected, or when VBUS is not present. Software must explicitly enable it at any other time. The USB peripheral will not be able to respond to USB traffic unless HFXO is enabled and stable.

#### 6.33.7.2 Host-initiated resume

Once the host resumes the bus activity, it has to be responsive to incoming requests on the USB bus within the time  $T_{\text{RSMRCY}}$  (as defined in chapter 7 of the USB specification) and revert to normal power consumption mode.

If the host resumes bus activity with or without a RESUME condition (in other words: bus activity is defined as any non-J state), the USB peripheral will generate a USBEVENT event, with RESUME bit set in register **EVENTCAUSE**. If the host resumes bus activity simply by restarting sending frames, the USB peripheral will generate SOF events.

#### 6.33.7.3 Device-initiated remote wake-up

Assuming the remote wake-up is supported by the device and enabled by the host, the device can request the host to resume from suspend if wake-up condition is met.

To do so, the HFXO needs to be enabled first. After waking up the HFXO, the software must bring USB peripheral out of the low power mode and into the normal power consumption mode through writing **ForceNormal** in register **LOWPOWER**. It can then instruct the USB peripheral to drive a RESUME condition (K state) on the USB bus by triggering the **DPDMDRIVE** task, and hence attempt to wake up the host. By choosing **Resume** in **DPDMVALUE**, the duration of the RESUME state is under hardware control ( $t_{\text{USB,DRIVEK}}$ ). By choosing **J** or **K**, the duration of that state is under software control (the J or K state is maintained until a **DPDMNODRIVE** task is triggered) and has to meet  $T_{\text{DRSMUP}}$  as specified in USB specification chapter 7.

Upon writing the **ForceNormal** in register **LOWPOWER**, a USBEVENT event is generated with the **USBWUALLOWED** bit set in register **EVENTCAUSE**.

The value in register **DPDMVALUE** on page 549 will only be captured and used when the **DPDMDRIVE** task is triggered. This value defines the state the bus will be forced into after the **DPDMDRIVE** task.

The device shall ensure that it does not initiate a remote wake-up request before  $T_{WTRSM}$  (according to USB specification chapter 7) after the bus has entered idle state. Using the recommended resume value in [DPDMVALUE](#) (rather than K) takes care of this, and postpones the RESUME state accordingly.

### 6.33.8 EasyDMA

The USB peripheral implements EasyDMA for accessing memory without CPU involvement.

Each endpoint has an associated set of registers, tasks and events. EasyDMA and traffic on USB are tightly related. A number of events provide insight of what is happening on the USB bus with a number of tasks allowing an automated response to the traffic.

**Note:** Endpoint 0 (IN and OUT) are implemented as control endpoint. For more information, see [Control transfers](#) on page 522.

## Registers

Enabling endpoints is controlled through the [EPINEN](#) and [EPOUTEN](#) registers.

The following registers define the memory address of the buffer for a specific IN or OUT endpoint:

- [EPIN\[n\].PTR](#), (n=0..7)
- [EPOUT\[n\].PTR](#), (n=0..7)
- [ISOIN.PTR](#)
- [ISOOUT.PTR](#)

The following registers define the amount of bytes to be sent on USB for next transaction:

- [EPIN\[n\].MAXCNT](#), (n=0..7)
- [ISOIN.MAXCNT](#)

The following registers define the length of the buffer (in bytes) for next transfer of incoming data:

- [EPOUT\[n\].MAXCNT](#), (n=1..7)
- [ISOOUT.MAXCNT](#)

Since the host decides how many bytes are sent over USB, the MAXCNT value can be copied from register [SIZE.EPOUT\[n\]](#) (n=1..7) or register [SIZE.ISOOUT](#).

Register [EPOUT\[0\].MAXCNT](#) defines the length of the OUT buffer (in bytes) for the control endpoint 0. Register [SIZE.EPOUT\[0\]](#) shall indicate the same value as `MaxPacketSize` from the device descriptor or `wLength` from the SETUP command, whichever is the least.

The [.AMOUNT](#) registers indicate how many bytes actually have been transferred over EasyDMA during the last transfer.

Stalling bulk/interrupt endpoints is controlled through the [EPSTALL](#) register.

**Note:** Due to USB specification requirements, the effect of the stalling control endpoint 0 may be overridden by hardware, in particular when a new SETUP token is received.

EasyDMA will not copy the SETUP data to memory (it will only transfer data from the data stage). The following are separate registers in the USB peripheral that have setup data.

- [BMREQUESTTYPE](#)
- [BREQUEST](#)
- [WVALUEL](#)
- [WVALUEH](#)
- [WINDEXL](#)
- [WINDEXH](#)

- [WLENGTHL](#)
- [WLENGTHH](#)

The [EVENTCAUSE](#) register provides details on what caused a given USBEVENT event, for instance if a CRC error is detected during a transaction, or if bus activity stops or resumes.

## Tasks

Tasks [STARTEPIN\[n\]](#), [STARTEPOUT\[n\]](#) ( $n=0..7$ ), [STARTISOIN](#), and [STARTISOOUT](#) capture the values for [.PTR](#) and [.MAXCNT](#) registers. For IN endpoints, a transaction over USB gets automatically triggered when the EasyDMA transfer is complete. For OUT endpoints, it is up to software to allow the next transaction over USB. See the examples in [Control transfers](#) on page 522, [Bulk and interrupt transactions](#) on page 525, and [Isochronous transactions](#) on page 527.

For the control endpoint 0, OUT transactions are allowed through the [EPORCVOUT](#) task. The [EPOSTATUS](#) task allows a status stage to be initiated, and the [EPOSTALL](#) task allows stalling further traffic (data or status stage) on the control endpoint.

## Events

The [STARTED](#) event confirms that the values of the [.PTR](#) and [.MAXCNT](#) registers of the endpoints flagged in register [EPSTATUS](#) have been captured. Those can then be modified by software for the next transfer.

Events [ENDEPIN\[n\]](#), [ENDEPOUT\[n\]](#) ( $n=0..7$ ), [ENDISOIN](#), and [ENDISOOUT](#) events indicate that the entire buffer has been consumed. The buffer can be accessed safely by the software.

Only a single EasyDMA transfer can take place in USB0 at any time. Software must ensure that tasks [STARTEPIN\[n\]](#) ( $n=0..7$ ), [STARTISOIN](#), [STARTEPOUT\[n\]](#) ( $n=0..7$ ), or [STARTISOOUT](#) are not triggered before events [ENDEPIN\[n\]](#) ( $n=0..7$ ), [ENDISOIN](#), [ENDEPOUT\[n\]](#) ( $n=0..7$ ), or [ENDISOOUT](#) are received from an on-going transfer.

The [EPDATA](#) event indicates that a successful (acknowledged) data transaction has occurred on the data endpoint(s) flagged in register [EPDATASTATUS](#). A successful (acknowledged) data transaction on endpoint 0 is signalled by the [EPODATADONE](#) event.

At any time a [USBEVENT](#) event may be sent, with details provided in [EVENTCAUSE](#) register.

The [EPOSETUP](#) event indicates that a SETUP token has been received on the control endpoint 0, and that the setup data is available in the [setup data registers](#).

### 6.33.9 Control transfers

The USB specification mandates every USB device to implement endpoint 0 IN and OUT as control endpoints.

A control transfer consists of two or three stages:

- Setup stage
- Data stage (optional)
- Status stage

Each control transfer can be one of following types:

- Control read
- Control read no data
- Control write
- Control write no data

An [EPOSETUP](#) event indicates that the data in the setup stage (following the SETUP token) is available in [registers](#).

The data in the data stage (following the IN or OUT token) is transferred from or to the desired location using EasyDMA.

The control endpoint buffer can be of any size.

After receiving the SETUP token, the USB controller will not accept (NAK) any incoming IN or OUT tokens until the software has finished decoding the command, determined the type of transfer, and prepared for the next stage (data or status) appropriately.

The software can stall a command when in the data and status stages, through the EPOSTALL task, when the command is not supported or if its wValue, wIndex or wLength parameters are wrong. The following shows a stalled control read transfer, but the same mechanism (tasks) applies to stalling a control write transfer.

Figure 185: Control read gets stalled

See the *USB 2.0 Specification* and relevant class specifications for rules on stalling commands.

**Note:** The USB peripheral handles the SetAddress transfer by itself. As a consequence, the software shall not process this command other than updating its state machine (see [Device state diagram](#)), nor initiate a status stage. If necessary, the address assigned by the host can be read out from the USBADDR register after the command has been processed.

### 6.33.9.1 Control read transfer

This section describes how the software behaves when responding to a control read transfer.

As mentioned earlier, the USB controller will not accept (NAK) any incoming IN tokens until software has finished decoding the command, determining the type of transfer, and preparing for the next stage (data or status) appropriately.

For a control read, transferring the data from memory into USB peripheral will trigger a valid, acknowledged (ACK) IN transaction on USB.

The software has to prepare EasyDMA by pointing to the buffer containing the data to be transferred. If no other EasyDMA transfers are on-going with USB peripheral, the software can send the STARTEPINO task, which will initiate the data transfer and transaction on USB.

A STARTED event (with EPINO bit set in the [EPSTATUS](#) register) will be generated as soon as the EPIN[0].PTR and .MAXCNT registers have been captured. Software may then prepare them for the next data transaction.

An ENDEPIN[0] event will be generated when the data has been transferred from memory to the USB peripheral.

Finally, an EPODATADONE event will be generated when the data has been transmitted over USB and acknowledged by the host.

The software can then either prepare and transmit the next data transaction by repeating the above sequence, or initiate the status stage through the EPOSTATUS task.

Figure 186: Control read transfer

It is possible to enable a shortcut from the EPODATADONE event to the EPOSTATUS task, typically if the data stage is expected to take a single transfer. If there is no data stage, the software can initiate the status stage through the EPOSTATUS task right away, as shown in the following figure.

Figure 187: Control read no data transfer

### 6.33.9.2 Control write transfer

This section describes how the software responds to a control write transfer.

The software has to prepare EasyDMA by pointing to the buffer in memory that shall contain the incoming data. If no other EasyDMA transfers are ongoing with USB, the software can then send the EPORCVOUT task, which will make USB acknowledge (ACK) the first OUT+DATA transaction from the host.

An EPODATADONE event will be generated when a new OUT+DATA has been transmitted over USB, and is about to get acknowledged by the device.

After receiving the first transaction, a STARTED event (the EPOUT0 bit set in the EPOSTATUS register) is generated when the EPOUT[0].PTR and .MAXCNT registers have been captured. Software may then prepare them for the next data transaction.

An ENDEPOUT[0] event will be generated when the data has been transferred from the USB peripheral to memory. The software can then either prepare to receive the next data transaction by repeating the above sequence, or initiate the status stage through the EPOSTATUS task. Until then, further incoming OUT +DATA transactions get a NAK response by the device.

Figure 188: Control write transfer

Figure 189: Control write no data transfer

### 6.33.10 Bulk and interrupt transactions

The USB peripheral implements seven pairs of bulk/interrupt endpoints.

The bulk/interrupt endpoints have a fixed USB endpoint number, summarized in the following table.

| Bulk endpoint # | USB IN endpoint | USB OUT endpoint |
|-----------------|-----------------|------------------|
| [1]             | 0x81            | 0x01             |
| [2]             | 0x82            | 0x02             |
| [3]             | 0x83            | 0x03             |
| [4]             | 0x84            | 0x04             |
| [5]             | 0x85            | 0x05             |
| [6]             | 0x86            | 0x06             |
| [7]             | 0x87            | 0x07             |

Table 134: Bulk/interrupt endpoint numbering

A bulk/interrupt transaction consists of a single data stage. Two consecutive, successful transactions are distinguished through alternating leading process ID (PID): DATA0 follows DATA1, DATA1 follows DATA0, etc. A repeated transaction is detected by re-using the same PID as previous transaction, i.e DATA0 follows DATA0, or DATA1 follows DATA1.

The USB controller automatically toggles DATA0/DATA1 PIDs for every bulk/interrupt transaction.

If incoming data is corrupted (CRC does not match), the USB controller automatically prevents DATA0/DATA1 from toggling, to request the host to resend the data.

In some specific cases, the software may want to force a data toggle (usually reset) on a specific IN endpoint, or force the expected toggle on an OUT endpoint, for instance as a consequence of the host issuing **ClearFeature**, **SetInterface**, or selecting an alternate setting. Controlling the data toggle of data IN or OUT endpoint  $n$  ( $n=1..7$ ) is done through register **DTOGGLE**.

The bulk/interrupt transaction in USB full-speed can be of any size up to 64 bytes. It must be a multiple of four bytes and 32-bit aligned in memory.

When the USB transaction has completed, an EPDATA event is generated. Until new data has been transferred by EasyDMA from memory to the USB peripheral (signalled by the ENDEPIN[n] event), the hardware will automatically respond with NAK to all incoming IN tokens. Software has to configure and start the EasyDMA transfer once it is ready to send more data.

Each IN or OUT data endpoint has to be explicitly enabled by software through register **EPINEN** or **EPOUTEN**, according to the configuration declared by the device and selected by the host through the **SetConfig** command.

A disabled data endpoint will not respond to any traffic from the host. An enabled data endpoint will normally respond NAK or ACK (depending on the readiness of the buffers), or STALL (if configured in register **EPSTALL**), in which case the endpoint is asked to halt. The halted (or not) state of a given endpoint can be read back from register HALTED.EPIN[n] or HALTED.EPOUT[n]. The format of the returned 16-bit value can be copied as is, as a response to a **GetStatusEndpoint** request from the host.

Enabling or disabling an endpoint will not change its halted state. However, a USB reset will disable and clear the halted state of all data endpoints.

The control endpoint 0 IN and OUT can also be enabled and/or halted using the same mechanisms, but due to USB specification, receiving a SETUP will override its state.

### 6.33.10.1 Bulk and interrupt IN transaction

The host issues IN tokens to receive bulk/interrupt data. In order to send data, the software has to enable the endpoint and prepare an EasyDMA transfer on the desired endpoint.

Bulk/interrupt IN endpoints are enabled or disabled through their respective INn bit ( $n=1..7$ ) in **EPINEN** register.

It is also possible to stall or resume communication on an endpoint through the **EPSTALL** register.

Figure 190: Bulk/interrupt IN transaction

It is possible (and in some situations it is required) to respond to an IN token with a zero-length data packet.

**Note:** On many USB hosts, not responding (DATA+ACK or NAK) to three IN tokens on an interrupt endpoint would have the host disable that endpoint as a consequence. Re-enumerating the device (unplug-replug) may be required to restore functionality. Make sure that the relevant data endpoints are enabled for normal operation as soon as the device gets configured through a **SetConfig** request.

### 6.33.10.2 Bulk and interrupt OUT transaction

When the host wants to transmit bulk/interrupt data, it issues an OUT token (packet) followed by a DATA packet on a given endpoint  $n$  ( $n=1..7$ ).

A NAK is returned until the software writes any value to register `SIZE.EPOUT[n]`, indicating that the content of the local buffer can be overwritten. Upon receiving the next OUT+DATA transaction, an ACK is returned to the host while an `EPDATA` event is generated (and the `EPDATASTATUS` register flags are set to indicate on which endpoint this happened). Once the EasyDMA is prepared and enabled, by writing the `EPOUT[n]` registers and triggering the `STARTEPOUT[n]` task, the incoming data will be transferred to memory. Until that transfer is finished, the hardware will automatically NAK any other incoming OUT+DATA packets. Only when the EasyDMA transfer is done (signalled by the `ENDEPOUT[n]` event), or as soon as any values are written by the software in register `SIZE.EPOUT[n]`, the endpoint  $n$  will accept incoming OUT+DATA again.

It is allowed for the host to send zero-length data packets.

Bulk/interrupt OUT endpoints are enabled or disabled through their respective `OUTn` bit ( $n=1..7$ ) in the `EPOUTEN` register. It is also possible to stall or resume communication on an endpoint through the `EPSTALL` register.

Figure 191: Bulk/interrupt OUT transaction

### 6.33.11 Isochronous transactions

The USB peripheral implements isochronous (ISO) endpoints.

The ISO endpoints have a fixed USB endpoint number, summarized in the following table.

| ISO endpoint # | USB IN endpoint | USB OUT endpoint |
|----------------|-----------------|------------------|
| [0]            | 0x88            | 0x08             |

Table 135: Isochronous endpoint numbering

An isochronous transaction consists of a single, non-acknowledged data stage. The host sends out a start of frame at a regular interval (1 ms), and data follows IN or OUT tokens within each frame.

EasyDMA allows transferring ISO data directly from and to memory. EasyDMA transfers must be initiated by the software, which can synchronize with the SOF (start of frame) events.

Because the timing of the start of frame is very accurate, the SOF event can be used for jobs such as synchronizing a local timer through the SOF event and PPI. The SOF event gets synchronized to the 16 MHz clock prior to being made available to the PPI.

Every start of frame increments a free-running counter, which can be read by software through the [FRAMECNTR](#) register.

Each IN or OUT ISO data endpoint has to be explicitly enabled by software through register [EPINEN](#) or [EPOUTEN](#), according to the configuration declared by the device and selected by the host through the **SetConfig** command. A disabled ISO IN data endpoint will not respond to any traffic from the host. A disabled ISO OUT data endpoint will ignore any incoming traffic from the host.

The USB peripheral has an internal 1 kB buffer associated with ISO endpoints. The user can either allocate the full amount to the IN or the OUT endpoint, or split the buffer allocation between the two using register [ISOSPLIT](#).

The internal buffer also sets the maximum size of the ISO OUT and ISO IN transfers: 1023 bytes when the full buffer is dedicated to either ISO OUT or ISO IN, and half when the buffer is split between the two.

### 6.33.11.1 Isochronous IN transaction

When the host wants to receive isochronous (ISO) data, it issues an IN token on the isochronous endpoint.

After the data has been transferred using the EasyDMA, the USB controller on the isochronous IN endpoint responds to the IN token with the transferred data using the [ISOIN.MAXCNT](#) for the size of the packet.

The ISO IN data endpoint has to be explicitly enabled by software through the ISOIN0 bit in register [EPINEN](#).

When an ISO IN endpoint is enabled and no data transferred with EasyDMA, the response of the USB peripheral depends on the setting of the RESPONSE field in register [ISOINCONFIG](#). It can either provide no response to an IN token or respond with a zero-length data.

If the EasyDMA transfer on the isochronous endpoint is not completed before the next SOF event, the result of the transfer is undefined.

The maximum size of an ISO IN transfer in USB full-speed is 1023 bytes. The data buffer has to be a multiple of 4 bytes 32-bit aligned in memory. However, the amount of bytes transferred on the USB data endpoint can be of any size (up to 1023 bytes, if not shared with an OUT ISO endpoint).

Figure 192: Isochronous IN transfer

### 6.33.11.2 Isochronous OUT transaction

When the host wants to send isochronous (ISO) data, it issues an OUT token on the isochronous endpoint, followed by data.

The ISO OUT data endpoint has to be explicitly enabled by software through the ISOOUT0 bit in register **EPOUTEN**.

The amount of last received ISO OUT data is provided in the **SIZE.ISOOUT** register. Software shall interpret the ZERO and SIZE fields as presented in the following table.

| ZERO     | SIZE              | Last received data size          |
|----------|-------------------|----------------------------------|
| Normal   | 0                 | No data received at all          |
| Normal   | 1..1023           | 1..1023 bytes of data received   |
| ZeroData | (not of interest) | Zero-length data packet received |

Table 136: ISO OUT incoming data size

When EasyDMA is prepared and started, triggering a STARTISOOUT task initiates an EasyDMA transfer to memory. Software shall synchronize ISO OUT transfers with the SOF events. EasyDMA uses the address in **ISOOUT.PTR** and size in **ISOOUT.MAXCNT** for every new transfer.

If the EasyDMA transfer on the isochronous endpoint is not completed before the next SOF event, the result of the transfer is undefined.

The maximum size of an isochronous OUT transfer in USB full-speed is 1023 bytes. The data buffer has to be a multiple of 4 bytes and 32-bit aligned in Data RAM. However, the amount of bytes transferred on the USB data endpoint can be of any size (up to 1023 bytes if not shared with an IN ISO endpoint).

If the last received ISO data packet is corrupted (wrong CRC), the USB controller generates an USBEVENT event (at the same time as SOF) and indicates a CRC error on ISOOUTCRC in register **EVENTCAUSE**. EasyDMA will transfer the data anyway if it has been set up properly.

Figure 193: Isochronous OUT transfer

### 6.33.12 USB register access limitations

Some of the registers in USBD cannot be accessed in specific conditions.

This may be the case when USBD is not enabled (using the [ENABLE](#) register) and ready (signalled by the READY bit in [EVENTCAUSE](#) after a USBEVENT event), or when USBD is in low power mode while the USB bus is suspended.

Triggering any tasks, including the tasks triggered through the PPI, is affected by this behavior. In addition, the following registers are affected:

- HALTED.EPIN[0..7]
- HALTED.EPOUT[0..7]
- USBADDR
- BMREQUESTTYPE
- BREQUEST
- WVALUEL
- WVALUEH
- WINDEXL
- WINDEXH
- WLENGTHL
- WLENGTHH
- SIZE.EPOUT[0..7]
- SIZE.ISOOUT
- USBPULLUP
- DTOGGLE
- EPINEN
- EPOUTEN
- EPSTALL
- ISOSPLIT
- FRAMECNTR

### 6.33.13 Registers

| Base address | Peripheral | Instance | Description                 | Configuration |
|--------------|------------|----------|-----------------------------|---------------|
| 0x40027000   | USBD       | USBD     | Universal serial bus device |               |

Table 137: Instances

| Register                           | Offset | Description                                                                                                             |
|------------------------------------|--------|-------------------------------------------------------------------------------------------------------------------------|
| <a href="#">TASKS_STARTEPIN[0]</a> | 0x004  | Captures the EPIN[0].PTR and EPIN[0].MAXCNT registers values, and enables endpoint IN 0 to respond to traffic from host |
| <a href="#">TASKS_STARTEPIN[1]</a> | 0x008  | Captures the EPIN[1].PTR and EPIN[1].MAXCNT registers values, and enables endpoint IN 1 to respond to traffic from host |
| <a href="#">TASKS_STARTEPIN[2]</a> | 0x00C  | Captures the EPIN[2].PTR and EPIN[2].MAXCNT registers values, and enables endpoint IN 2 to respond to traffic from host |
| <a href="#">TASKS_STARTEPIN[3]</a> | 0x010  | Captures the EPIN[3].PTR and EPIN[3].MAXCNT registers values, and enables endpoint IN 3 to respond to traffic from host |
| <a href="#">TASKS_STARTEPIN[4]</a> | 0x014  | Captures the EPIN[4].PTR and EPIN[4].MAXCNT registers values, and enables endpoint IN 4 to respond to traffic from host |
| <a href="#">TASKS_STARTEPIN[5]</a> | 0x018  | Captures the EPIN[5].PTR and EPIN[5].MAXCNT registers values, and enables endpoint IN 5 to respond to traffic from host |

| Register            | Offset | Description                                                                                                                                                           |
|---------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TASKS_STARTEPIN[6]  | 0x01C  | Captures the EPIN[6].PTR and EPIN[6].MAXCNT registers values, and enables endpoint IN 6 to respond to traffic from host                                               |
| TASKS_STARTEPIN[7]  | 0x020  | Captures the EPIN[7].PTR and EPIN[7].MAXCNT registers values, and enables endpoint IN 7 to respond to traffic from host                                               |
| TASKS_STARTISOIN    | 0x024  | Captures the ISOIN.PTR and ISOIN.MAXCNT registers values, and enables sending data on ISO endpoint                                                                    |
| TASKS_STARTEPOUT[0] | 0x028  | Captures the EPOUT[0].PTR and EPOUT[0].MAXCNT registers values, and enables endpoint 0 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[1] | 0x02C  | Captures the EPOUT[1].PTR and EPOUT[1].MAXCNT registers values, and enables endpoint 1 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[2] | 0x030  | Captures the EPOUT[2].PTR and EPOUT[2].MAXCNT registers values, and enables endpoint 2 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[3] | 0x034  | Captures the EPOUT[3].PTR and EPOUT[3].MAXCNT registers values, and enables endpoint 3 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[4] | 0x038  | Captures the EPOUT[4].PTR and EPOUT[4].MAXCNT registers values, and enables endpoint 4 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[5] | 0x03C  | Captures the EPOUT[5].PTR and EPOUT[5].MAXCNT registers values, and enables endpoint 5 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[6] | 0x040  | Captures the EPOUT[6].PTR and EPOUT[6].MAXCNT registers values, and enables endpoint 6 to respond to traffic from host                                                |
| TASKS_STARTEPOUT[7] | 0x044  | Captures the EPOUT[7].PTR and EPOUT[7].MAXCNT registers values, and enables endpoint 7 to respond to traffic from host                                                |
| TASKS_STARTISOOUT   | 0x048  | Captures the ISOOUT.PTR and ISOOUT.MAXCNT registers values, and enables receiving of data on ISO endpoint                                                             |
| TASKS_EPORCVOUT     | 0x04C  | Allows OUT data stage on control endpoint 0                                                                                                                           |
| TASKS_EPOSTATUS     | 0x050  | Allows status stage on control endpoint 0                                                                                                                             |
| TASKS_EPOSTALL      | 0x054  | Stalls data and status stage on control endpoint 0                                                                                                                    |
| TASKS_DPDMDRIVE     | 0x058  | Forces D+ and D- lines into the state defined in the DPDMVALUE register                                                                                               |
| TASKS_DPDMNODRIVE   | 0x05C  | Stops forcing D+ and D- lines into any state (USB engine takes control)                                                                                               |
| EVENTS_USBRESET     | 0x100  | Signals that a USB reset condition has been detected on USB lines                                                                                                     |
| EVENTS_STARTED      | 0x104  | Confirms that the EPIN[n].PTR and EPIN[n].MAXCNT, or EPOUT[n].PTR and EPOUT[n].MAXCNT registers have been captured on all endpoints reported in the EPSTATUS register |
| EVENTS_ENDEPIN[0]   | 0x108  | The whole EPIN[0] buffer has been consumed. The buffer can be accessed safely by software.                                                                            |

| ISOOUT.MAXCNT   | 0x7A4  | Maximum number of bytes to transfer                 |
| ISOOUT.AMOUNT   | 0x7A8  | Number of bytes transferred in the last transaction |

Table 138: Register overview

### 6.33.13.1 TASKS\_STARTEPIN[n] (n=0..7)

Address offset: 0x004 + (n × 0x4)

Captures the EPIN[n].PTR and EPIN[n].MAXCNT registers values, and enables endpoint IN n to respond to traffic from host

| Bit number       |            |                 |       | 31                                                                                                                      | 30 | 29 | 28 | 27 | 26 | 25 | 24 | 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |  |  |  |

 ### 6.33.13.43 DPDMVALUE

Address offset: 0x508

State D+ and D- lines will be forced into by the DPDMDRIVE task. The DPDMNODRIVE task reverts the control of the lines to MAC IP (no forcing).

       ## 6.33.14 Electrical specification

### 6.33.14.1 USB Electrical Specification

| Symbol                     | Description                                                              | Min. | Typ. | Max.  | Units |
|----------------------------|--------------------------------------------------------------------------|------|------|-------|-------|
| R <sub>USB,PU,ACTIVE</sub> | Value of pull-up on D+, bus active (upstream device transmitting)        | 1425 | 2300 | 3090  | Ω     |
| R <sub>USB,PU,IDLE</sub>   | Value of pull-up on D+, bus idle                                         | 900  | 1200 | 1575  | Ω     |
| t <sub>USB,DETRST</sub>    | Minimum duration of an SE0 state to be detected as a USB reset condition |      |      |       | μs    |
| f <sub>USB,CLK</sub>       | Frequency of local clock, USB active                                     |      | 48   |       | MHz   |
| f <sub>USB,TOL</sub>       | Accuracy of local clock, USB active <sup>40</sup>                        |      |      | ±1000 | ppm   |
| T <sub>USB,JITTER</sub>    | Jitter on USB local clock, USB active                                    |      |      | ±1    | ns    |

## 6.34 WDT — Watchdog timer

A countdown watchdog timer using the low-frequency clock source (LFCLK) offers configurable and robust protection against application lock-up.

The watchdog timer is started by triggering the START task.

The watchdog can be paused during long CPU sleep periods for low power applications and when the debugger has halted the CPU. The watchdog is implemented as a down-counter that generates a TIMEOUT event when it wraps over after counting down to 0. When the watchdog timer is started through the START task, the watchdog counter is loaded with the value specified in the CRV register. This counter is also reloaded with the value specified in the CRV register when a reload request is granted.

The watchdog's timeout period is given by the following equation:

$$\text{timeout [s]} = ( \text{CRV} + 1 ) / 32768$$

<sup>40</sup> The local clock can be stopped during USB suspend

When started, the watchdog will automatically force the 32.768 kHz RC oscillator on as long as no other 32.768 kHz clock source is running and generating the 32.768 kHz system clock, see chapter [CLOCK — Clock control](#) on page 82.

### 6.34.1 Reload criteria

The watchdog has eight separate reload request registers, which shall be used to request the watchdog to reload its counter with the value specified in the CRV register. To reload the watchdog counter, the special value 0x6E524635 needs to be written to all enabled reload registers.

One or more RR registers can be individually enabled through the RREN register.

### 6.34.2 Temporarily pausing the watchdog

By default, the watchdog will be active counting down the down-counter while the CPU is sleeping and when it is halted by the debugger. It is possible to configure the watchdog to automatically pause while the CPU is sleeping as well as when it is halted by the debugger.

### 6.34.3 Watchdog reset

A TIMEOUT event will automatically lead to a watchdog reset.

See [Reset](#) on page 69 for more information about reset sources. If the watchdog is configured to generate an interrupt on the TIMEOUT event, the watchdog reset will be postponed with two 32.768 kHz clock cycles after the TIMEOUT event has been generated. Once the TIMEOUT event has been generated, the impending watchdog reset will always be effectuated.

The watchdog must be configured before it is started. After it is started, the watchdog's configuration registers, which comprise registers CRV, RREN, and CONFIG, will be blocked for further configuration.

The watchdog can be reset from several reset sources, see [Reset behavior](#) on page 70.

When the device starts running again, after a reset, or waking up from OFF mode, the watchdog configuration registers will be available for configuration again.

### 6.34.4 Registers

| Base address | Peripheral | Instance | Description    | Configuration |
|--------------|------------|----------|----------------|---------------|
| 0x40010000   | WDT        | WDT      | Watchdog timer |               |

Table 139: Instances

| Register       | Offset | Description                                  |
|----------------|--------|----------------------------------------------|
| TASKS_START    | 0x000  | Start the watchdog                           |
| EVENTS_TIMEOUT | 0x100  | Watchdog timeout                             |
| INTENSET       | 0x304  | Enable interrupt                             |
| INTENCLR       | 0x308  | Disable interrupt                            |
| RUNSTATUS      | 0x400  | Run status                                   |
| REQSTATUS      | 0x404  | Request status                               |
| CRV            | 0x504  | Counter reload value                         |
| RREN           | 0x508  | Enable register for reload request registers |
| CONFIG         | 0x50C  | Configuration register                       |
| RR[0]          | 0x600  | Reload request 0                             |
| RR[1]          | 0x604  | Reload request 1                             |
| RR[2]          | 0x608  | Reload request 2                             |
| RR[3]          | 0x60C  | Reload request 3                             |
| RR[4]          | 0x610  | Reload request 4                             |

| Register | Offset | Description      |
|----------|--------|------------------|
| RR[5]    | 0x614  | Reload request 5 |
| RR[6]    | 0x618  | Reload request 6 |
| RR[7]    | 0x61C  | Reload request 7 |

# 7 Hardware and layout

## 7.1 Pin assignments

The pin assignment figures and tables describe the pinouts for the product variants of the chip.

The nRF52833 device provides flexibility regarding GPIO pin routing and configuration. However, some pins have limitations or recommendations for pin configurations and uses.

### 7.1.1 aQFN73 ball assignments

The ball assignment figure and table in the following section describe the assignments for this variant of the chip.

Figure 194: aQFN™73 ball assignments, top view

Table 141: aQFN™ 73 ball assignments

**Note:** For more information on standard drive, see [GPIO — General purpose input/output](#) on page 141. Low frequency I/O is a signal with a frequency up to 10 kHz.

**Note:** If SPIM0, SPIM1, or SPIM2 is used with 8 Mbps data rate, the recommended GPIOs for the clock signal (SCK) are P0.27, P1.08, P0.04, and P1.09.

### 7.1.2 QFN40 pin assignments

The pin assignment figure and table describe the assignments for this variant of the chip.

Figure 195: QFN40 pin assignments, top view

| Pin                            | Name          | Function     | Description                                                        | Recommended usage                                                                                       |

| Die pad                         | VSS   | Power        | Ground pad                        | Exposed die pad must be connected to ground (VSS) for proper device operation |

Table 142: QFN40 pin assignments

**Note:** For more information on standard drive, see [GPIO — General purpose input/output](#) on page 141. Low frequency I/O is a signal with a frequency up to 10 kHz.

**Note:** If SPIM0, SPIM1, or SPIM2 is used with 8 Mbps data rate, the recommended GPIOs for the clock signal (SCK) are P1.09, P0.04, and P0.31.

### 7.1.3 WLCSP ball assignments

The ball assignment figure and table describe the assignments for this variant of the chip.

Figure 196: WLCSP ball assignments, top view

| Pin | Name   | Function     | Description                       | Recommended usage                      |
|-----|--------|--------------|-----------------------------------|----------------------------------------|
| A1  | XC1    | Analog input | Connection for 32 MHz crystal     |                                        |
| A2  | XC2    | Analog input | Connection for 32 MHz crystal     |                                        |
| A3  | P0.25  | Digital I/O  | General purpose I/O               | Standard drive, low frequency I/O only |
| A4  | P0.03  | Digital I/O  | General purpose I/O pin           | Standard drive, low frequency I/O only |
|     | AIN1   | Analog input | Analog input                      |                                        |
| A5  | P0.29  | Digital I/O  | General purpose I/O pin           | Standard drive, low frequency I/O only |
|     | AIN5   | Analog input | Analog input                      |                                        |
| A6  | DEC4   | Power        | 1.3 V regulator supply decoupling | Must be connected to DEC6 (ball C2)    |
| A7  | VSS    | Power        | Ground                            |                                        |
| A8  | DCC    | Power        | DC/DC converter output            |                                        |
| A9  | VDD    | Power        | Power supply                      |                                        |
| B3  | VDD    | Power        | Power supply                      |                                        |
| B4  | P1.03  | Digital I/O  | General purpose I/O               | Standard drive, low frequency I/O only |

Table 143: WLCSP ball assignments

**Note:** For more information on standard drive, see [GPIO — General purpose input/output](#) on page 141. Low frequency I/O is a signal with a frequency up to 10 kHz.

**Note:** If SPIM0, SPIM1, or SPIM2 is used with 8 Mbps data rate, the recommended GPIOs for the clock signal (SCK) are P0.27, P1.08, P0.04, and P1.09.

## 7.2 Mechanical specifications

The mechanical specifications for the packages show the dimensions in millimeters.

### 7.2.1 aQFN73 7 x 7 mm package

Dimensions in millimeters for the aQFN<sup>TM</sup> 73 7 x 7 mm package.

Table 146: WLCSP dimensions in millimeters

### 7.3 Reference circuitry

To ensure good RF performance when designing PCBs, it is highly recommended to use the PCB layouts and component values provided by Nordic Semiconductor.

Documentation for the different package reference circuits, including Altium Designer files, PCB layout files, and PCB production files can be downloaded from the product page for the nRF52833 on [www.nordicsemi.com](http://www.nordicsemi.com).

In this section there are reference circuits for QIAA aQFN™ 73, CJAA WLCSP, and QDAA QFN40 packages, showing the components and component values to support on-chip features in a design.

**Note:** This is not a complete list of configurations, but all required circuitry is shown for further configurations.

Some general guidance is summarized here:

- When supplying power from a USB source only, VBUS must be connected to VDDH if USB is to be used.
- Components required for DC/DC function are only needed if DC/DC mode is enabled for that regulator.
- NFC can be used in any configuration.
- USB can be used in any configuration as long as VBUS is supplied by the USB host.
- The schematics include an optional series resistor on the USB supply for improved immunity to transient overvoltage during VBUS connection. Using the series resistor is recommended for new designs.

## Circuit configurations for QIAA aQFN™ 73

| Config no. | Supply configuration   |                        | Features that can be enabled for each configuration example |     |     |
|------------|------------------------|------------------------|-------------------------------------------------------------|-----|-----|
|            | VDDH                   | VDD                    | DCDCEN1                                                     | USB | NFC |
| Config. 1  | USB (VDDH = VBUS)      | N/A                    | No                                                          | Yes | No  |
| Config. 2  | Battery/Ext. regulator | N/A                    | No                                                          | Yes | No  |
| Config. 3  | N/A                    | Battery/Ext. regulator | No                                                          | Yes | No  |
| Config. 4  | Battery/Ext. regulator | N/A                    | Yes                                                         | Yes | No  |
| Config. 5  | N/A                    | Battery/Ext. regulator | Yes                                                         | Yes | Yes |
| Config. 6  | N/A                    | Battery/Ext. regulator | No                                                          | No  | No  |

Table 147: Circuit configurations

## Circuit configurations for QDAA QFN40

| Config no. | Supply configuration   |                        | Features that can be enabled for each configuration example |     |     |
|------------|------------------------|------------------------|-------------------------------------------------------------|-----|-----|
|            | VDDH                   | VDD                    | DCDCEN1                                                     | USB | NFC |
| Config. 1  | USB (VDDH = VBUS)      | N/A                    | No                                                          | Yes | No  |
| Config. 2  | Battery/Ext. regulator | N/A                    | No                                                          | Yes | No  |
| Config. 3  | N/A                    | Battery/Ext. regulator | No                                                          | Yes | No  |
| Config. 4  | Battery/Ext. regulator | N/A                    | Yes                                                         | Yes | No  |
| Config. 5  | N/A                    | Battery/Ext. regulator | Yes                                                         | Yes | Yes |
| Config. 6  | N/A                    | Battery/Ext. regulator | No                                                          | No  | No  |

Table 148: Circuit configurations

## Circuit configurations for CJAA WLCSP

| Config no. | Supply configuration   |                        | Features that can be enabled for each configuration example |     |     |
|------------|------------------------|------------------------|-------------------------------------------------------------|-----|-----|
|            | VDDH                   | VDD                    | DCDCEN1                                                     | USB | NFC |
| Config. 1  | USB (VDDH = VBUS)      | N/A                    | No                                                          | Yes | No  |
| Config. 2  | Battery/Ext. regulator | N/A                    | No                                                          | Yes | No  |
| Config. 3  | N/A                    | Battery/Ext. regulator | No                                                          | Yes | No  |
| Config. 4  | Battery/Ext. regulator | N/A                    | Yes                                                         | Yes | No  |
| Config. 5  | N/A                    | Battery/Ext. regulator | Yes                                                         | Yes | Yes |
| Config. 6  | N/A                    | Battery/Ext. regulator | No                                                          | No  | No  |

Table 149: Circuit configurations

### 7.3.1 Circuit configuration no. 1 for QIAA aQFN73

Circuit configuration number 1 for QIAA aQFN™ 73, showing the schematic and the bill of materials table.

| Config no. | Supply configuration |     | Enabled features |     |     |
|------------|----------------------|-----|------------------|-----|-----|
|            | VDDH                 | VDD | DCDCEN1          | USB | NFC |
| Config. 1  | USB (VDDH = VBUS)    | N/A | No               | Yes | No  |

Table 150: Configuration summary for circuit configuration no. 1

### 7.3.8 Circuit configuration no. 2 for QDAA QFN40

This section contains a configuration summary, a schematic, and bill of materials table for QDAA QFN40 circuit configuration number 2.

| Config no. | Supply configuration   |     | Enabled features |     |     |
|------------|------------------------|-----|------------------|-----|-----|
|            | VDDH                   | VDD | DCDCEN1          | USB | NFC |
| Config. 2  | Battery/Ext. regulator | N/A | No               | Yes | No  |

Table 185: Bill of material for circuit configuration no. 6

### 7.3.19 PCB guidelines

A well designed PCB is necessary to achieve good RF performance. Poor layout can lead to loss in performance or functionality.

A qualified RF layout for the IC and its surrounding components, including matching networks, can be downloaded from [www.nordicsemi.com](http://www.nordicsemi.com).

To ensure optimal performance it is essential that you follow the schematics and layout references closely. Especially in the case of the antenna matching circuitry (components between device pin ANT and the antenna), any changes to the layout can change the behavior, resulting in degradation of RF performance or a need to change component values. All reference circuits are designed for use with a 50  $\Omega$  single-ended antenna.

A PCB with a minimum of four layers, including a ground plane, is recommended for optimal performance. Put a keep-out area on the inner layers directly below the antenna matching circuitry (components between device pin ANT and the antenna) to reduce the stray capacitances that influence RF performance.

A matching network is needed between the RF pin ANT and the antenna, to match the antenna impedance (normally 50  $\Omega$ ) to the optimum RF load impedance for the chip. For optimum performance, the impedance for the matching network should be set as described in the recommended package reference circuitry in [Reference circuitry](#) on page 570.

The DC supply voltage should be decoupled as close as possible to the VDD pins with high performance RF capacitors. See the schematics for recommended decoupling capacitor values. The supply voltage for the chip should be filtered and routed separately from the supply voltages of any digital circuitry.

Long power supply lines on the PCB should be avoided. All device grounds, VDD connections, and VDD bypass capacitors must be connected as close as possible to the IC. For a PCB with a topside RF ground plane, the VSS pins should be connected directly to the ground plane. For a PCB with a bottom ground

plane, the best technique is to have via holes as close as possible to the VSS pads. A minimum of one via hole should be used for each VSS pin.

Fast switching digital signals should not be routed close to the crystal or the power supply lines. Capacitive loading of fast switching digital output lines should be minimized in order to avoid radio interference.

### 7.3.20 PCB layout example

The PCB layout shown in the following figures is a reference layout for the aQFN™ package with internal LDO setup and VBUS supply.

**Note:** Pay attention to how the capacitor C3 is grounded. It is not directly connected to the ground plane, but grounded via VSS\_PA pin F23. This is done to create additional filtering of harmonic components.

For all available reference layouts, see the product page for the nRF52833 on [www.nordicsemi.com](http://www.nordicsemi.com).

**Note:** No components in bottom layer.

## 7.4 Package thermal characteristics

A summary of the thermal characteristics for the different packages available for the IC can be found below.

| Symbol               | Package | Typ.   | Unit |
|----------------------|---------|--------|------|
| $\theta_{JA,aQFN73}$ | aQFN73  | 74.60  | °C/W |
| $\theta_{JA,QFN40}$  | QFN40   | 136.59 | °C/W |
| $\theta_{JA,WLCSP}$  | WLCSP   | 93.09  | °C/W |

Table 186: Package thermal characteristics

Values obtained by simulation following the EIA/JESD51-2 for still air condition.

## 7.5 Package Variation

The following describes the variation between the stated parameters in this specification and the values for the specific device package.

### 7.5.1 aQFN73

The parameter variation when using the aQFN73 package is as follows:

| Symbol                    | Min. | Typ.              | Max. | Unit |
|---------------------------|------|-------------------|------|------|
| $P_{SENS,IEEE\ 802.15.4}$ |      | -99               |      | dBm  |
| $P_{SENS,IT,SP,1M,BLE}$   |      | -95               |      | dBm  |
| $P_{RF}$                  |      | 7.5 <sup>41</sup> |      | dBm  |

Table 187: aQFN73 Package variation

<sup>41</sup> Achieved using  $P_{OS}8\text{dBm}$  setting in **RADIO.TXPOWER**

# 8 Recommended operating conditions

The operating conditions are the physical parameters that the chip can operate within.

| Symbol              | Parameter                                       | Min. | Nom. | Max. | Units |
|---------------------|-------------------------------------------------|------|------|------|-------|
| VDD                 | VDD supply voltage, independent of DCDC enable  | 1.7  | 3.0  | 3.6  | V     |
| VDD <sub>POR</sub>  | VDD supply voltage needed during power-on reset | 1.75 |      |      | V     |
| VDDH                | VDDH supply voltage                             | 2.5  | 3.7  | 5.5  | V     |
| VBUS                | VBUS USB supply voltage                         | 4.35 | 5.0  | 5.5  | V     |
| t <sub>R_VDD</sub>  | Supply rise time (0 V to 1.7 V)                 |      |      | 60   | ms    |
| t <sub>R_VDDH</sub> | Supply rise time (0 V to 3.7 V)                 |      |      | 100  | ms    |
| T <sub>A</sub>      | Operating temperature                           | -40  | 25   | 85   | °C    |
| T <sub>AEXT</sub>   | Extended operating temperature                  | 85   |      | 105  | °C    |
| T <sub>J</sub>      | Junction temperature                            |      |      | 110  | °C    |

Table 188: Recommended operating conditions

**Note:** The on-chip power-on reset circuitry may not function properly for rise times longer than the specified maximum.

## 8.1 Extended Operating Temperature

The operating temperature range for the device is defined in [Recommended operating conditions](#) on page 611. The range extends from T<sub>A</sub> minimum to T<sub>AEXT</sub> maximum.

Some electrical parameters are valid only for the T<sub>A</sub> operating temperature conditions. When this is the case, an additional parameter for the T<sub>AEXT</sub> extended operating temperature condition is provided.

**Note:** When running the device in the extended operating temperature conditions range, the register [LFXODEBOUNCE](#) on page 94 must be set to `Extended`.

To avoid surpassing the maximum die junction temperature, see [Recommended operating conditions](#) on page 611, it is important to minimize current consumption when operating in the extended operating temperature conditions. To achieve this, it is recommended to use the device in Normal Voltage mode with DC/DC enabled. See [POWER — Power supply](#) on page 61 for details about main supply modes.

## 8.2 WLCSP light sensitivity

All WLCSP package variants are sensitive to visible and close-range infrared light. This means that a final product design must shield the chip properly, either by final product encapsulation or by shielding/coating of the WLCSP device.

Some WLCSP package variants have a backside coating, where the marking side of the device is covered with a light absorbing film, while the side edges and the ball side of the device are still exposed and need to be protected. Other WLCSP package variants do not have any such protection.

The WLCSP package variant CJAA has a backside coating.

# 9 Absolute maximum ratings

Maximum ratings are the extreme limits to which the chip can be exposed for a limited amount of time without permanently damaging it. Exposure to absolute maximum ratings for prolonged periods of time may affect the reliability of the device.<sup>42</sup>

|                                                     | Note                               | Min.   | Max.      | Unit               |

| Retention at 105 °C-85 °C, execution split          | Limited to 1000 write/erase cycles | 6.7    |           | years              |

75% execution time at 85 °C or less

Table 189: Absolute maximum ratings

<sup>42</sup> For accelerated life time testing (HTOL, etc) supply voltage should not exceed the recommended operating conditions max value, see [Recommended operating conditions](#) on page 611.

# 10 Ordering information

This chapter contains information on device marking, ordering codes, and container sizes.

## 10.1 Device marking

The nRF52833 package is marked as shown in the following figure. Only the first two characters of the function variant code are used in the <VV> entry.

|    |    |    |    |     |     |
|----|----|----|----|-----|-----|
| N  | 5  | 2  | 8  | 3   | 3   |
| <P | P> | <V | V> | <H> | <P> |
| <Y | Y> | <W | W> | <L  | L>  |

Figure 223: Package marking

## 10.2 Box labels

The following figures show the box labels used for nRF52833.

Figure 224: Inner box label

|                                                                                                                                                                                                                                                    |                                                                                                                                                                                                              |

## 10.5 Product options

Defined here are the nRF52833 product options.

| Order code         | MOQ <sup>43</sup> | Comment                         |
|--------------------|-------------------|---------------------------------|
| nRF52833-QIAA-R7   | 800               | Not recommended for new designs |
| nRF52833-QIAA-R    | 3000              | Not recommended for new designs |
| nRF52833-QIAA-B-R7 | 800               |                                 |
| nRF52833-QIAA-B-R  | 3000              |                                 |
| nRF52833-QDAA-R7   | 1500              | Not recommended for new designs |
| nRF52833-QDAA-R    | 4000              | Not recommended for new designs |
| nRF52833-QDAA-B-R7 | 1500              |                                 |
| nRF52833-QDAA-B-R  | 4000              |                                 |
| nRF52833-CJAA-R7   | 1500              | Not recommended for new designs |
| nRF52833-CJAA-R    | 7000              | Not recommended for new designs |
| nRF52833-CJAA-B-R7 | 1500              |                                 |
| nRF52833-CJAA-B-R  | 7000              |                                 |

# 11 Legal notices

By using this documentation you agree to our terms and conditions of use. Nordic Semiconductor may change these terms and conditions at any time without notice.

## Liability disclaimer

Nordic Semiconductor ASA reserves the right to make changes without further notice to the product to improve reliability, function, or design. Nordic Semiconductor ASA does not assume any liability arising out of the application or use of any product or circuits described herein.

Nordic Semiconductor ASA does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. If there are any discrepancies, ambiguities or conflicts in Nordic Semiconductor's documentation, the Product Specification prevails.

Nordic Semiconductor ASA reserves the right to make corrections, enhancements, and other changes to this document without notice.

Customer represents that, with respect to its applications, it has all the necessary expertise to create and implement safeguards that anticipate dangerous consequences of failures, monitor failures and their consequences, and lessen the likelihood of failures that might cause harm, and to take appropriate remedial actions.

Nordic Semiconductor ASA assumes no liability for applications assistance or the design of customers' products. Customers are solely responsible for the design, validation, and testing of its applications as well as for compliance with all legal, regulatory, and safety-related requirements concerning its applications.

Nordic Semiconductor ASA's products are not designed for use in life-critical medical equipment, support appliances, devices, or systems where malfunction of Nordic Semiconductor ASA's products can reasonably be expected to result in personal injury. Customer may not use any Nordic Semiconductor ASA's products in life-critical medical equipment unless adequate design and operating safeguards by customer's authorized officers have been made. Customer agrees that prior to using or distributing any life-critical medical equipment that include Nordic Semiconductor ASA's products, customer will thoroughly test such systems and the functionality of such products as used in such systems.

Customer will fully indemnify Nordic Semiconductor ASA and its representatives against any damages, costs, losses, and/or liabilities arising out of customer's non-compliance with this section.

## RoHS and REACH statement

Refer to [www.nordicsemi.com](http://www.nordicsemi.com) for complete hazardous substance reports, material composition reports, and latest version of Nordic's RoHS and REACH statements.
