

ExpressCard™ POWER INTERFACE SWITCH

Check for Samples: [TPS2231](#) [TPS2236](#)

FEATURES

- Meets the ExpressCard™ Standard (ExpressCard|34 or ExpressCard|54)
- Compliant with the ExpressCard™ Compliance Checklists
- Fully Satisfies the ExpressCard™ Implementation Guidelines
- Supports Systems with WAKE Function
- TTL-Logic Compatible Inputs
- Short Circuit and Thermal Protection
- –40°C to 85°C Ambient Operating Temperature Range

- Available in a 20-pin TSSOP, a 20-pin QFN, or 24-pin PowerPAD™ HTSSOP (Single)
- Available in a 32-pin PowerPAD™ HTSSOP (Dual)

APPLICATIONS

- Notebook Computers
- Desktop Computers
- Personal Digital Assistants (PDAs)
- Digital Cameras
- TV and Set Top Boxes

DESCRIPTION

The TPS2231 and TPS2236 ExpressCard power interface switches provide the total power management solution required by the ExpressCard specification. The TPS2231 and TPS2236 ExpressCard power interface switches distribute 3.3 V, AUX, and 1.5 V to the ExpressCard socket. Each voltage rail is protected with integrated current-limiting circuitry.

The TPS2231 supports systems with single-slot ExpressCard|34 or ExpressCard|54 sockets. The TPS2236 supports systems with dual-slot ExpressCard sockets.

End equipment for the TPS2231 and TPS2236 include notebook computers, desktop computers, personal digital assistants (PDAs), and digital cameras.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerPAD is a trademark of Texas Instruments.

ExpressCard is a trademark of Personal Computer Memory Card International Association.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Copyright © 2004–2009, Texas Instruments Incorporated

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

AVAILABLE OPTIONS

T _A	NUMBER OF CHANNELS	PACKAGED DEVICES ^{(1) (2)}		
		TSSOP	PowerPAD HTSSOP	QFN
–40°C to 85°C	Single	TPS2231PW	TPS2231PWP	TPS2231RGP
				TPS2231MRGP ⁽³⁾
				TPS2231MRGP-1 ⁽⁴⁾
				TPS2231MRGP-2 ⁽⁵⁾
				TPS2231MRGP-3 ⁽⁶⁾
	Dual		TPS2236DAP	

- (1) The package is available taped and reeled. Add an R suffix to device types (e.g., TPS2231PWPR).
- (2) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.
- (3) The TPS2231MRGP is identical to the TPS2231 with the exception of the PowerPAD dimensions. See the Thermal Pad Mechanical data portion of this data sheet for specific information. The thermal pad for the TPS2231MRGP and TPS2231MRGP-1 is 2,2 mm × 2,2 mm; the thermal pad for the TPS2231RGP is 2,7 mm × 2,7 mm.
- (4) The TPS2231MRGP-1 is identical to the TPS2231MRGP with the exception that the orientation of the part in the reel is rotated 180°. See the Package Materials Information portion of this data sheet for specific information.
- (5) The TPS2231MRGP-2 is identical to the TPS2231MRGP with the exception that the orientation of the part in the reel is rotated 90° and does not have an internal pull-up resistor between AUX IN and SYSRST. See the Package Materials Information portion of this data sheet for specific information.
- (6) The TPS2231MRGP-3 is identical to the TPS2231MRGP with the exception that the 1.5VIN and 3.3VIN UVLO circuits are independent.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

			TPS223x	UNIT	
V _I	Input voltage range for card power	V _{I(3.3VIN)}	–0.3 to 6	V	
		V _{I(1.5VIN)}	–0.3 to 6	V	
		V _{I(AUXIN)}	–0.3 to 6	V	
Logic input/output voltage			–0.3 to 6	V	
V _O	Output voltage range	V _{O(3.3VOUT)}	–0.3 to 6	V	
		V _{O(1.5VOUT)}	–0.3 to 6	V	
		V _{O(AUXOUT)}	–0.3 to 6	V	
Continuous total power dissipation			See Dissipation Rating Table		
I _O	Output current	I _{O(3.3VOUT)}	Internally limited		
		I _{O(AUXOUT)}	Internally limited		
		I _{O(1.5VOUT)}	Internally limited		
$\overline{\text{OC}}$ sink current			10	mA	
$\overline{\text{PERST}}$ sink/source current			10	mA	
T _J	Operating virtual junction temperature range		–40 to 120	°C	
T _{stg}	Storage temperature range		–55 to 150	°C	
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds			260	°C	
ESD	Electrostatic discharge protection	Human body model (HBM) MIL-STD-883C	TPS2231	2	kV
			TPS2236, all pins except $\overline{\text{PERSTx}}$ and $\overline{\text{OCx}}$		
			TPS2236, $\overline{\text{PERSTx}}$ and $\overline{\text{OCx}}$	1.5	kV
		Charge device model (CDM)		500	V

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

DISSIPATION RATINGS (Thermal Resistance = °C/W)

PACKAGE	T _A ≤ 25°C POWER RATING	DERATING FACTOR ABOVE T _A = 25°C	T _A = 70°C POWER RATING	T _A = 85°C POWER RATING
PW (20) ⁽¹⁾	704.2 mW	7.41 mW/°C	370.6 mW	259.5 mW
PWP (24) ⁽¹⁾	3153 mW	33.19 mW/°C	1659.5 mW	1161.6 mW
RGP (20) ⁽²⁾	3277.5 mW	34.5 mW/°C	1725 mW	1207.3 mW
DAP (32) ⁽¹⁾ PowerPAD not soldered down	993.4 mW	10.46 mW/°C	522.8 mW	366 mW
DAP (32) ⁽¹⁾	4040.8 mW	42.55 mW/°C	2126.8 mW	1488.7 mW

- (1) These devices are mounted on an JEDEC low-k board (2-oz. traces on surface), (The table is assuming that the maximum junction temperature is 120°C). The power pad on the device must be soldered down to the power pad on the board if best thermal performance is needed.
- (2) This device is mounted on a JEDEC JES051.5 high-k board (2 signal, 2 plane). The values assume a maximum junction temperature of 120°C.

RECOMMENDED OPERATING CONDITIONS

			MIN	MAX	UNIT
V _{I(3.3VIN)}	Input voltage	3.3VIN is only required for its respective functions	3	3.6	V
V _{I(1.5VIN)}		1.5VIN is only required for its respective functions	1.35	1.65	
V _{I(AUXIN)}		AUXIN is required for all circuit operations	3	3.6	
I _{O(3.3VOUT)}	Continuous output current	T _J = 120°C	0	1.3	A
I _{O(1.5VOUT)}			0	650	mA
I _{O(AUXOUT)}			0	275	mA
T _J	Operating virtual junction temperature		−40	120	°C

ELECTRICAL CHARACTERISTICS

T_J = 25°C, V_{I(3.3VIN)} = V_{I(AUXIN)} = 3.3 V, V_{I(1.5VIN)} = 1.5 V, V_{I(/SHDNx)}, V_{I(/STBYx)} = 3.3 V, V_{I(/CPPEX)} = V_{I(/CPUSBX)} = 0 V, V_{I(/SYSRST)} = 3.3 V, OCx and RCLKENx and PERSTx are open, all voltage outputs unloaded (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
POWER SWITCH							
Power switch resistance	3.3VIN to 3.3VOUT with two switches on for dual	T _J = 25°C, I = 1300 mA each	45			mΩ	
		T _J = 100°C, I = 1300 mA each	68				
	1.5VIN to 1.5VOUT With two switches on for dual	T _J = 25°C, I = 650 mA each	46			mΩ	
		T _J = 100°C, I = 650 mA each	70				
	AUXIN to AUXOUT with two switches on for dual	T _J = 25°C, I = 275 mA each	120			mΩ	
		T _J = 100°C, I = 275 mA each	200				
R _(DIS_FET)	Discharge resistance on 3.3V/1.5V/AUX outputs		V _{II} (/SHDNx) = 0 V, I _(discharge) = 1 mA		100	500	Ω
I _{OS}	Short-circuit output current ⁽¹⁾	I _{OS} (3.3VOUT) (steady-state value)	1.35	2	2.5	A	
		I _{OS} (1.5VOUT) (steady-state value)	0.67	1	1.3	A	
		I _{OS} (AUXOUT)(steady-state value)	275	450	600	mA	
Thermal shutdown	Trip point, T _J	Rising temperature, not in overcurrent condition	155	165		°C	
		Overcurrent condition	120	130			
		Hysteresis		10			
Current-limit response time	From short to the 1 st threshold within 1.1 times of final current limit, T _J = 25°C	V _O (3.3VOUT) with 100-mΩ short	43	100		μs	
		V _O (1.5VOUT) with 100-mΩ short, TPS2231	100	140			
		V _O (1.5VOUT) with 100-mΩ short, TPS2236	110	150			
		V _O (AUXOUT) with 100-mΩ short	38	100			

- (1) Pulse-testing techniques maintain junction temperature close to ambient temperature; thermal effects must be taken into account separately.

FUNCTIONAL BLOCK DIAGRAM

Single ExpressCard Power Switch

Dual ExpressCard Power Switch

DETAILED PIN DESCRIPTIONS

CPPE

A logic low level on this input indicates that the card present supports PCI Express functions. $\overline{\text{CPPE}}$ connects to the AUXIN input through an internal pullup. When a card is inserted, $\overline{\text{CPPE}}$ is physically connected to ground if the card supports PCI Express functions.

CPUSB

A logic low level on this input indicates that the card present supports USB functions. $\overline{\text{CPUSB}}$ connects to the AUXIN input through an internal pullup. When a card is inserted, $\overline{\text{CPUSB}}$ is physically connected to ground if the card supports USB functions.

SHDN

When asserted (logic low), this input instructs the power switch to turn off all voltage outputs and the discharge FETs are activated. SHDN has an internal pullup connected to AUXIN.

STBY

When asserted (logic low) after the card is inserted, this input places the power switch in standby mode by turning off the 3.3-V and 1.5-V power switches and keeping the AUX switch on. If asserted prior to the card being present, STBY places the power switch in OFF Mode by turning off the AUX, 3.3-V, and 1.5-V power switches. STBY has an internal pullup connected to AUXIN.

RCLKEN

This pin serves as both an input and an output. On power up, a discharge FET keeps this signal at a low state as long as any of the output power rails are out of their tolerance range. Once all output power rails are within tolerance, the switch releases RCLKEN allowing it to transition to a high state (internally pulled up to AUXIN). The transition of RCLKEN from a low to a high state starts an internal timer for the purpose of deasserting PERST. As an input, RCLKEN can be kept low to delay the start of the PERST internal timer.

Because RCLKEN is internally connected to a discharge FET, this pin can only be driven low and should never be driven high as a logic input. When an external circuit drives this pin low, RCLKEN becomes an input; otherwise, this pin is an output.

RCLKEN can be used by the host system to enable a clock driver.

PERST

On power up, this output remains asserted (logic level low) until all power rails are within tolerance. Once all power rails are within tolerance and RCLKEN has been released (logic high), PERST is deasserted (logic high) after a time delay as shown in the parametric table. On power down, this output is asserted whenever any of the power rails drop below their voltage tolerance.

The $\overline{\text{PERST}}$ signal is an output from the host system and an input to the ExpressCard module. This signal is only used by PCI Express-based modules and its function is to place the ExpressCard module in a reset state.

During power up, power down, or whenever power to the ExpressCard module is not stable or not within voltage tolerance limits, the ExpressCard standard requires that $\overline{\text{PERST}}$ be asserted. As a result, this signal also serves as a power-good indicator to the ExpressCard module, and the relationship between the power rails and $\overline{\text{PERST}}$ are explicitly defined in the ExpressCard standard.

The host can also place the ExpressCard module in a reset state by asserting a system reset $\overline{\text{SYSRST}}$. This system reset generates a $\overline{\text{PERST}}$ to the ExpressCard module without disrupting the voltage rails. This is what is normally called a *warm* reset. However, in a *cold* start situation, the system reset can also be used to extend the length of time that PERST is asserted.

SYSRST

This input is driven by the host system and directly affects $\overline{\text{PERST}}$. Asserting $\overline{\text{SYSRST}}$ (logic low) forces $\overline{\text{PERST}}$ to assert. RCLKEN is not affected by the assertion of $\overline{\text{SYSRST}}$. $\overline{\text{SYSRST}}$ has an internal pullup connected to AUXIN.

OC

This pin is an open-drain output. When any of the three power switches (AUX, 3.3V, and 1.5V) is in an overcurrent condition, $\overline{\text{OC}}$ is asserted (logic low) by an internal discharge FET with a deglitch delay. Otherwise, the discharge FET is open, and the pin can be pulled up to a power supply through an external resistor.

FUNCTIONAL TRUTH TABLES**Truth Table for Voltage Outputs**

VOLTAGE INPUTS ⁽¹⁾			LOGIC INPUTS			VOLTAGE OUTPUTS ⁽²⁾			MODE ⁽³⁾
AUXIN	3.3VIN	1.5VIN	$\overline{\text{SHDN}}$	$\overline{\text{STBY}}$	$\overline{\text{CP}}$ ⁽⁴⁾	AUXOUT	3.3VOUT	1.5VOUT	
Off	x	x	x	x	x	Off	Off	Off	OFF
On	x	x	0	x	x	GND	GND	GND	Shutdown
On	x	x	1	x	1	GND	GND	GND	No Card
On	On	On	1	0	0	On	Off	Off	Standby
On	On	On	1	1	0	On	On	On	Card Inserted

- (1) For input voltages, *On* means the respective input voltage is higher than its turnon threshold voltage; otherwise, the voltage is *Off* (for AUX input, *Off* means the voltage is close to zero volt).
- (2) For output voltages, *On* means the respective power switch is turned on so the input voltage is connected to the output; *Off* means the power switch and its output discharge FET are both off; *GND* means the power switch is off but the output discharge FET is on so the voltage on the output is pulled down to 0 V.
- (3) *Mode* assigns each set of input conditions and respective output voltage results to a different name. These modes are referred to as *input conditions* in the following *Truth Table for Logic Outputs*.
- (4) CP = CPUSB and CPPE – equal to 1 when both CPUSB and CPPE signals are logic high, or equal to 0 when either $\overline{\text{CPUSB}}$ or $\overline{\text{CPPE}}$ is low.

Truth Table for Logic Outputs

INPUT CONDITIONS			LOGIC OUTPUTS	
MODE	$\overline{\text{SYSRST}}$	RCLKEN ⁽¹⁾	$\overline{\text{PERST}}$	RCLKEN ⁽²⁾
OFF	X	X	0	0
Shutdown				
No Card				
Standby				
Card Inserted	0	Hi-Z	0	1
	0	0	0	0
	1	Hi-Z	1	1
	1	0	0	0

- (1) RCLKEN as a logic input in this column. RCLKEN is an I/O pin and it can be driven low externally, left open, or connected to high-impedance terminals, such as the gate of a MOSFET. It must not be driven high externally.
- (2) RCLKEN as a logic output in this column.

POWER STATES

If AUXIN is not present, then all input-to-output power switches are kept off (*OFF* mode).

If AUXIN is present and $\overline{\text{SHDN}}$ is asserted (logic low), then all input-to-output power switches are kept off and the output discharge FETs are turned on (*Shutdown* mode). If SHDN is asserted and then de-asserted, the state on the outputs is restored to the state prior to SHDN assertion.

If 3.3VIN, AUXIN and 1.5VIN are present at the input of the power switch and no card is inserted, then all input-to-output power switches are kept off and the output discharge FETs are turned on (*No Card* mode).

If 3.3VIN, AUXIN and 1.5VIN are present at the input of the power switch prior to a card being inserted, then all input-to-output power switches are turned on once a card-present signal ($\overline{\text{CPUSB}}$ and/or $\overline{\text{CPPE}}$) is detected (*Card Inserted* mode).

If a card is present and all output voltages are being applied, then the $\overline{\text{STBY}}$ is asserted (logic low); the AUXOUT voltage is provided to the card, and the 3.3VOUT and 1.5VOUT switches are turned off (*Standby* mode).

If a card is present and all output voltages are being applied, then the 1.5VIN, or 3.3VIN is removed from the input of the power switch; the AUXOUT voltage is provided to the card and the 3.3VOUT and 1.5VOUT switches are turned off (*Standby* mode). TPS2231-3 only: If 3.3VIN is removed, the 3.3VOUT switch is turned off; and, the 1.5VOUT switch is unaffected. If 1.5VIN is removed, the 1.5VOUT switch is turned off; and, the 3.3VOUT switch is unaffected.

If prior to the insertion of a card, the AUXIN is available at the input of the power switch and 3.3VIN and/or 1.5VIN are not, or if $\overline{\text{STBY}}$ is asserted (logic low), then no power is made available to the card (*OFF* mode). If 1.5VIN and 3.3VIN are made available at the input of the power switch after the card is inserted and $\overline{\text{STBY}}$ is not asserted, all the output voltages are made available to the card (*Card Inserted* mode). TPS2231-3 only: If 1.5VIN or 3.3VIN is made available at the input of the power switch after the card is inserted and $\overline{\text{STBY}}$ is not asserted, all switches above their individual UVLO thresholds will turn on.

DISCHARGE FETs

The discharge FETs on the outputs are activated whenever the device detects that a card is not present (*No Card* mode). Activation occurs after the input-to-output power switches are turned off (*break before make*). The discharge FETs de-activate if either of the card-present lines go active low, unless the $\overline{\text{SHDN}}$ pin is asserted.

The discharge FETs are also activated whenever the $\overline{\text{SHDN}}$ input is asserted and stay asserted until $\overline{\text{SHDN}}$ is de-asserted.

APPLICATION INFORMATION

INTRODUCTION TO ExpressCard

An ExpressCard module is an add-in card with a serial interface based on PCI Express and/or Universal Serial Bus (USB) technologies. An ExpressCard comes in two form factors defined as ExpressCard|34 or ExpressCard|54. The difference, as defined by the name, is the width of the module, 34 mm or 54 mm, respectively. Host systems supporting the ExpressCard module can support either the ExpressCard|34 or ExpressCard|54 or both.

ExpressCard POWER REQUIREMENTS

Regardless of which ExpressCard module is used, the power requirements as defined in the ExpressCard Standard apply to both on an individual slot basis. The host system is required to supply 3.3 V, 1.5 V, and AUX to each of the ExpressCard slots. However, the voltage is only applied after an ExpressCard is inserted into the slot.

The ExpressCard connector has two pins, $\overline{\text{CPPE}}$ and $\overline{\text{CPUSB}}$, that are used to signal the host when a card is inserted. If the ExpressCard module itself connects the $\overline{\text{CPPE}}$ to ground, the logic low level on that signal indicates to the host that a card supporting PCI Express has been inserted. If $\overline{\text{CPUSB}}$ is connected to ground, then the ExpressCard module supports the USB interface. If both PCI Express and USB are supported by the ExpressCard module, then both signals, $\overline{\text{CPPE}}$ and $\overline{\text{CPUSB}}$, must be connected to ground.

In addition to the Card Present signals ($\overline{\text{CPPE}}$ and $\overline{\text{CPUSB}}$), the host system determines when to apply power to the ExpressCard module based on the state of the system. The state of the system is defined by the state of the 3.3 V, 1.5 V, and AUX input voltage rails. For the sake of simplicity, the 3.3-V and 1.5-V rails are defined as the primary voltage rails as oppose to the auxiliary voltage rail, AUX.

ExpressCard POWER SWITCH OPERATION

The ExpressCard power switch resides on the host, and its main function is to control when to send power to the ExpressCard slot. The ExpressCard power switch makes decisions based on the Card Present inputs and on the state of the host system as defined by the primary and auxiliary voltage rails.

The following conditions define the operation of the host power controller:

1. When both primary power and auxiliary power at the input of the ExpressCard power switch are off, then all power to the ExpressCard connector is off regardless of whether a card is present.
2. When both primary power and auxiliary power at the input of the ExpressCard power switch are on, then power is only applied to the ExpressCard after the ExpressCard power switch detects that a card is present.
3. When primary power (either +3.3 V or +1.5 V) at the input of the ExpressCard power switch is off and auxiliary power at the input of the ExpressCard power switch is on, then the ExpressCard power switch behaves in the following manner:
 - (a) If neither of the Card Present inputs is detected (no card inserted), then no power is applied to the ExpressCard slot.
 - (b) If the card is inserted after the system has entered this power state, then no power is applied to the ExpressCard slot.
 - (c) If the card is inserted prior to the removal of the primary power (either +3.3 V or +1.5 V or both) at the input of the ExpressCard power switch, then only the primary power (both +3.3 V and +1.5 V) is removed and the auxiliary power is sent to the ExpressCard slot.

Figure 18 through Figure 23 illustrate the timing relationships between power/logic inputs and outputs of ExpressCard.

EXPRESS CARD TIMING DIAGRAMS

REVISION HISTORY

NOTE: Page numbers in the latest revision may differ from previous versions.

Changes from Revision F (August 2007) to Revision G Page

- Changed note ⁽¹⁾ of the Available Options table. 2

(1) The TPS2231MRGP is identical to the TPS2231 with the exception of the PowerPAD dimensions. See the Thermal Pad Mechanical data portion of this data sheet for specific information. The thermal pad for the TPS2231MRGP and TPS2231MRGP-1 is 2,2 mm x 2,2 mm; the thermal pad for the TPS2231RGP is 2,7 mm x 2,7 mm.

Changes from Revision G (August 2007) to Revision H Page

- Changed From; reel is rotated 90°C To: reel is rotated 180°C 2

Changes from Revision H (September 2007) to Revision I Page

- Added TPS2231MRGP-2 and ⁽²⁾ to the Available Options table. 2
- Added TPS2231, TPS2231-1, and TPS2231-1 values to the Logic input supply current 4
- Added Note C to the Function Block Diagram 9

(2) The TPS2231MRGP-2 is identical to the TPS2231MRGP with the exception that the orientation of the part in the reel is rotated 90° and does not have an internal pull-up resistor between AUX IN and SYSRST. See the Package Materials Information portion of this data sheet for specific information.

Changes from Revision I (November 2007) to Revision J Page

- Added TPS2231-3 to the Available Options table. 2
- Added explanatory footnote to Available Options table regarding TPS2231MRGP-3 2
- Added TPS2231-3 test condition statement to UVLO spec. 5
- Added power state explanation for TPS2231-3 device. 13

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of ≤ 1000 ppm threshold. Antimony trioxide based flame retardants must also meet the ≤ 1000 ppm threshold requirement.

(3) **MSL, Peak Temp.** - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) **Lead/Ball Finish** - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
 - E. Falls within JEDEC MO-153

PW (R-PDSO-G20)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate design.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

PWP (R-PDSO-G24)

PowerPAD™ PLASTIC SMALL OUTLINE

NOTES:

- All linear dimensions are in millimeters.
- This drawing is subject to change without notice.
- Body dimensions do not include mold flash or protrusions. Mold flash and protrusion shall not exceed 0.15 per side.
- This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 for information regarding recommended board layout. This document is available at www.ti.com <<http://www.ti.com>>.
- See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
- Falls within JEDEC MO-153

PWP (R-PDSO-G24) PowerPAD™ SMALL PLASTIC OUTLINE

THERMAL INFORMATION

This PowerPAD™ package incorporates an exposed thermal pad that is designed to be attached to a printed circuit board (PCB). The thermal pad must be soldered directly to the PCB. After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For additional information on the PowerPAD package and how to take advantage of its heat dissipating abilities, refer to Technical Brief, PowerPAD Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 and Application Brief, PowerPAD Made Easy, Texas Instruments Literature No. SLMA004. Both documents are available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

4206332-29/AO 01/16

NOTE: A. All linear dimensions are in millimeters

B. Exposed tie strap features may not be present.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
