FAQ

The top acrylic cover is removable. If you want to add a HAT or Cape on your SBC inside the case, there is no need to re-screw the whole case because the top acrylic layer is designed to be removed easily.

Stackable structure to extend endless possibilities for building different applications such as NAS.
If your application requires more space, for example, adding more hard disks to make a NAS, the stackable structure allows you to stack more middle layers to create rooms very easily.

At Seeed, you can also design your solution all in one page where you choose the desired SBC, any compatible mission board (HATs, expansions) that you want, I/O modules, and nicely place them in the suitable enclosures/cases such as [re computer case](#). Rest assured, as we have tested full compatibility for all of the products listed on the page. Try it now [here](#) and save you time to find hardware compatibility!
