

Low voltage 16-bit constant current LED sink driver with auto power saving

Datasheet - production data

Features

- Low voltage power supply down to 3 V
- 16 constant current output channels
- Adjustable output current through external resistor
- Serial data IN / parallel data OUT
- Auto power-saving feature minimizes the quiescent current if no active data is detected on the latches
- Can be driven by a 3.3 V microcontroller
- Output current: 5-100 mA
- Max clock frequency 30 MHz
- ESD protection 2.5 kV HBM, 200 V MM

Description

The STP16CPS05 is a monolithic, low voltage, low current power 16-bit shift register designed for LED panel displays. The STP16CPS05 contains a 16-bit serial-in, parallel-out shift register that feeds a 16-bit, D-type storage register. In the output stage, sixteen regulated current sources provide from 5 mA to 100 mA constant current to drive the LEDs. The auto power shut-down and auto power-ON feature allows the device to save power without any external intervention. The output current setup time is 40 ns (typ), thus improving the system performance. The LEDs' brightness can be controlled by using an external resistor to adjust the STP16CPS05 output current. The STP16CPS05 guarantees a 20 V output driving capability, allowing users to connect more LEDs in series. The high clock frequency, 30 MHz, makes the device suitable for high data rate transmission. The 3.3 V voltage supply is useful in applications that interface with a 3.3 V microcontroller.

2 Electrical ratings

2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Table 4. Absolute maximum ratings

| Symbol | Parameter | Value | Unit |
|-----------|---|------------------|------|
| V_{DD} | Supply voltage | 0 to 7 | V |
| V_O | Output voltage | -0.5 to 20 | V |
| I_O | Output current | 100 | mA |
| V_I | Input voltage | -0.4 to V_{DD} | V |
| I_{GND} | GND terminal current | 1600 | mA |
| f_{CLK} | Clock frequency | 50 | MHz |
| T_J | Junction temperature range ⁽¹⁾ | -40 to +170 | °C |

1. Such absolute value is achieved according the thermal shutdown
