

TRF37C75 40-4000 MHz RF Gain Block

1 Features

- 40 MHz – 4000 MHz
- Gain: 18 dB
- Noise Figure: 3.5 dB
- Output P1dB: 19.5 dBm at 2000 MHz
- Output IP3: 34 dBm at 2000 MHz
- Power Down Mode
- Single Supply: 5 V
- Stabilized Performance Over Temperature
- Unconditionally Stable
- Robust ESD: >1 kV HBM; >1 kV CDM

2 Applications

- General Purpose RF Gain Block
- Consumer
- Industrial
- Utility Meters
- Low-cost Radios
- Cellular Base Station
- Wireless Infrastructure
- RF Backhaul
- Radar
- Electronic Warfare
- Software-defined Radio
- Test and Measurement
- Point-to-Point/Multipoint Microwave
- Software Defined Radios
- RF Repeaters
- Distributed Antenna Systems
- LO and PA Driver Amplifier
- Wireless Data, Satellite, DBS, CATV
- IF Amplifier

3 Description

The TRF37C75 is packaged in a 2.00mm x 2.00mm WSON with a power down pin making it ideal for applications where space and low power modes are critical.

The TRF37C75 is designed for ease of use. For maximum flexibility, this family of parts uses a common 5 V supply and consumes 85 mA. In addition, this family was designed with an active bias circuit that provides a stable and predictable bias current over process, temperature and voltage variations. For gain and linearity budgets the device was designed to provide a flat gain response and excellent OIP3 out to 4000 MHz. For space constrained applications this family is internally matched to 50 Ω which simplifies ease of use and minimizes needed PCB area.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TRF37C75	WSON (32)	2.00mm x 2.00mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

Simplified Schematic

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

5 Pin Configuration and Functions

Pin Functions

PIN		DESCRIPTION
NAME	NO.	
VCC	1	DC Bias.
RFIN	2	RF input. Connect to an RF source through a DC-blocking capacitor. Internally matched to 50 Ω .
NC	3, 4, 6, 8	No electrical connection. Connect pad to GND for board level reliability integrity.
PWDN	5	When high the device is in power down state. When LOW or NC the device is in active state. Internal pulldown resistor to GND.
RFOUT	7	RF Output and DC Bias (V_{CC}). Connect to DC supply through an RF choke inductor. Connect to output load through a DC-blocking capacitor. Internally matched to 50 Ω .
GND	PowerPAD™	RF and DC GND. Connect to PCB ground plane.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		MIN	MAX	UNIT
Supply Input voltage		–0.3	6	V
Input Power	With recommended R _{bias} resistor		10	dBm
Operating virtual junction temperature range		–40	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 Handling Ratings

			MIN	MAX	UNIT
T _{STG}	Storage temperature range		−65	150	°C
V _{ESD}	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	−1	1	kV
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	−1	1	kV

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
Supply Voltage, V _{CC}		4.5	5	5.25	V
Operating junction temperature, T _J		–40		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		DSG	UNIT
		8 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	79.3	°C/W
R _{θJctop}	Junction-to-case (top) thermal resistance	110	
R _{θJB}	Junction-to-board thermal resistance	49	
ψ _{JT}	Junction-to-top characterization parameter	6	
ψ _{JB}	Junction-to-board characterization parameter	49.4	
R _{θJcbot}	Junction-to-case (bottom) thermal resistance	19.2	

- (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics

$V_{CC} = 5\text{ V}$, $T_A = 25^\circ\text{C}$, $\text{PWDN} = \text{Low}$, $R_{\text{BIAS}} = 6.8\ \Omega$, $L_{\text{OUT}} = 100\text{ nH}$, $C_1 = C_2 = 1000\text{ pF}$, $Z_S = Z_L = 50\ \Omega$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
DC Parameters						
I_{CC}	Total supply current			85		mA
	Power down current	$\text{PWDN} = \text{High}$		125		μA
P_{diss}	Power dissipation			0.425		W
RF Frequency Range						
	Frequency range		40		4000	MHz
G	Small signal gain	$f_{\text{RF}} = 400\text{ MHz}$		18.8		dB
		$f_{\text{RF}} = 2000\text{ MHz}$		17.5		dB
		$f_{\text{RF}} = 3000\text{ MHz}$		17		dB
		$f_{\text{RF}} = 4000\text{ MHz}$		16		dB
OP1dB	Output 1dB compression point	At 2000 MHz		18		dBm
OIP3	Output 3rd order intercept point	At 2000 MHz, 2-tone 10MHz apart		34		dBm
NF	Noise figure	At 2000 MHz		3.5		dB
$R_{(\text{LI})}$	Input return loss			22		dB
$R_{(\text{LO})}$	Output return loss			11		dB
PWDN Pin						
V_{IH}	High level input level		2			V
V_{IL}	Low level input level				0.8	V
I_{IH}	High level input current			30		μA
I_{IL}	Low level input current			1		μA

6.6 Timing Requirements

			MIN	TYP	MAX	UNIT
PWDN Pin						
t_{ON}	Turn-on Time	50% TTL to 90% P_{OUT}		0.6		μs
t_{OFF}	Turn-off Time	50% TTL to 10% P_{OUT}		1.4		μs

6.7 Typical Characteristics

7 Detailed Description

7.1 Overview

The device is a 5 V general purpose RF gain block. It is a SiGe Darlington amplifier with integrated 50 Ω input and output matching. The device contains an active bias circuit to maintain performance over a wide temperature and voltage range. The included power down function allows the amplifier to shut down saving power when the amplifier is not needed. Fast shut down and start up enable the amplifier to be used in a host of time division duplex applications.

7.2 Functional Block Diagram

7.3 Feature Description

The TRF37C75 is a fixed gain RF amplifier. It is internally matched to 50 Ω on both the input and output. It is a fully cascable general purpose amplifier. The included active bias circuitry ensures the amplifier performance is optimized over the full operating temperature and voltage ranges.

7.4 Device Functional Modes

7.4.1 Power Down

The TRF37C75 PWDN pin can be left unconnected for normal operation or a logic-high for disable mode operation. For applications that use the power down mode, normal 5 V TLL levels are supported.

8 Applications and Implementation

8.1 Application Information

The TRF37C75 is a wideband high performance general purpose RF amplifier. To maximize its performance, good RF layout and grounding techniques should be employed.

8.2 Typical Application

The TRF37C75 device is typically placed in a system as illustrated in [Figure 13](#).

Figure 13. Typical Application Schematic for TRF37C75

8.2.1 Design Requirements

Table 1. Design Parameters

PARAMETERS	EXAMPLE VALUES
Input power range	< 3 dBm
Output power	< 18 dBm
Operating frequency range	40 — 4000 MHz

8.2.2 Detailed Design Procedure

The TRF37C75 is a simple to use internally matched and cascable RF amplifier. Following the recommended RF layout with good quality RF components and local DC bypass capacitors will ensure optimal performance is achieved. TI provides various support materials including S-Parameter and ADS models to allow the design to be optimized to the user's particular performance needs.

8.2.3 Application Curves

Figure 14. OP1dB and NF vs Frequency

9 Power Supply Recommendations

All supplies may be generated from a common nominal 5 V source but should be isolated through decoupling capacitors placed close to the device. The typical application schematic in [Figure 13](#) is an excellent example. Select capacitors with self-resonant frequency near the application frequency. When multiple capacitors are used in parallel to create a broadband decoupling network, place the capacitor with the higher self-resonant frequency closer to the device. Expensive tantalum capacitors are not needed for optimal performance.

10 Layout

10.1 Layout Guidelines

Good layout practice helps to enable excellent linearity and isolation performance. An example of good layout is shown in Figure 15. In the example, only the top signal layer and its adjacent ground reference plane are shown.

- Excellent electrical connection from the PowerPAD™ to the board ground is essential. Use the recommended footprint, solder the pad to the board, and do not include solder mask under the pad.
- Connect pad ground to device terminal ground on the top board layer.
- Verify that the return DC and RF current path have a low impedance ground plane directly under the package and RF signal traces into and out of the amplifier.
- Ensure that ground planes on the top and any internal layers are well stitched with vias.
- Do not route RF signal lines over breaks in the reference ground plane.
- Avoid routing clocks and digital control lines near RF signal lines.
- Do not route RF or DC signal lines over noisy power planes. Ground is the best reference, although clean power planes can serve where necessary.
- Place supply decoupling close to the device.

10.2 Layout Example

11 Device and Documentation Support

11.1 Trademarks

PowerPAD is a trademark of Texas Instruments.

11.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

11.3 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms and definitions.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TRF37C75IDSGR	ACTIVE	WSO	DSG	8	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	C75I	Samples
TRF37C75IDSGT	ACTIVE	WSO	DSG	8	250	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	C75I	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
