- 1. Referenced ambient temperature 25°C
- 2. Test Condition: 100 kHz, 0.25 Vrms
- 3. Saturation Current Isat (typ): DC current (A) that will cause L0 to drop approximately 30% Isat (min): DC current (A) that will cause L0 to drop 30% max

  Temperature Rise Current Irms (typ): DC current (A) that will cause an approximate ΔT of 40°C

Irms (min): DC current (A) that will cause an approximate  $\Delta T$  of 40°C max

- 4. Operating temperature range includes self-temperature rise
- 5. The rated current as listed is either the saturation current or the heating current depending on which value is lower.

#### PART NUMBER KEY

Type / Product Series

F1F5 - 1707 - XXX X

Inductance Tolerance M =  $\pm 20\%$ Inductance \*

1R0 = 1.0  $\mu$ H

\* Note: Inductance expressed by three figures. The unit is micro henry (µH). The first and second figures are significant digits, the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R" (3R8 = 3.8 µH). In that case, all figures are significant digits.
