

## NDS335N

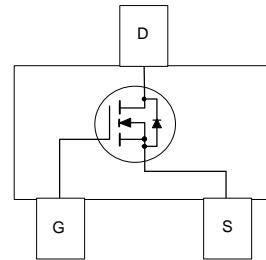

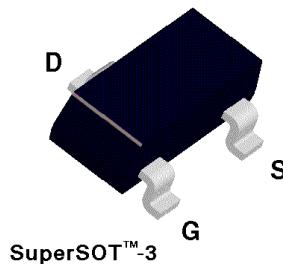

### N-Channel Logic Level Enhancement Mode Field Effect Transistor

#### General Description

These N-Channel logic level enhancement mode power field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance. These devices are particularly suited for low voltage applications in notebook computers, portable phones, PCMCIA cards, and other battery powered circuits where fast switching, and low in-line power loss are needed in a very small outline surface mount package.

#### Features

- 1.7 A, 20 V.  $R_{DS(ON)} = 0.14 \Omega$  @  $V_{GS} = 2.7$  V  
 $R_{DS(ON)} = 0.11 \Omega$  @  $V_{GS} = 4.5$  V.
- Industry standard outline SOT-23 surface mount package using proprietary SuperSOT™-3 design for superior thermal and electrical capabilities.
- High density cell design for extremely low  $R_{DS(ON)}$ .
- Exceptional on-resistance and maximum DC current capability.

Notes:

1.  $R_{\text{JCA}}$  is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins.  $R_{\text{JCA}}$  is guaranteed by design while  $R_{\text{CA}}$  is determined by the user's board design.

$$P_D(t) = \frac{T_J - T_A}{R_{\text{JCA}}(t)} = \frac{T_J - T_A}{R_{\text{JCA}}(t) + R_{\text{CA}}(t)} = I_D^2(t) \times R_{\text{DS(ON)}}(t)$$

Typical  $R_{\text{JCA}}$  using the board layouts shown below on 4.5" x 5" FR-4 PCB in a still air environment:

a. 250°C/W when mounted on a 0.02 in<sup>2</sup> pad of 2oz copper.  
b. 270°C/W when mounted on a 0.001 in<sup>2</sup> pad of 2oz copper.
