

HiFiBerry DAC+ RTC

The HiFiBerry DAC+ RTC is a high-resolution digital-to-analog converter for the Raspberry Pi. It is a special sound card for the one-board-computer optimized for one specific use case: the best audio playback quality.

The RTC version comes with an integrated real time clock. This ensures that your system always knows the exact time, even if the system is turned off and can't sync to time servers after a reboot (e.g. due to loss of internet connectivity).

Facts

- Dedicated 192kHz/24bit high-quality Burr-Brown DAC
- Connects directly to the Raspberry Pi, no additional cables needed
- No soldering, comes as a pre-fabricated kit. You just plug it onto the Raspberry Pi, it is conform to the Raspberry Pi hardware-attached-on-top (HAT) specification.
- Compatible with Raspberry Pi models A+, B+, 2B and 3B
- Directly powered from the Raspberry Pi, no additional power supply
- Ultra-low-noise voltage regulator for optimal audio performance
- Comes with all components required to mount it. We include 4 M2.5x12mm spacers to fix the board onto the Raspberry Pi.
- Integrated real time clock (battery not included)

size without package	5.5 x 6.5 x 2.0 cm
size including package	9.5 x 7.5 x 2.5 cm
weight	0.02 kg
GTIN	4260439550439

Usage recommendations

- installations which need to be very reliable and easy to fix after internet or electricity losses
- audio setups in shops or malls
