

# TXB0101 1-Bit Bidirectional Level-Shifting and Voltage Translator With Auto Direction-Sensing and $\pm 15$ -kV ESD Protection

## 1 Features

- Available in the Texas Instruments NanoFree™ Package
- 1.2 V to 3.6 V on A Port and 1.65 V to 5.5 V on B Port ( $V_{CCA} \leq V_{CCB}$ )
- $V_{CC}$  Isolation Feature – If Either  $V_{CC}$  Input is at GND, All Outputs are in the High-Impedance State
- OE Input Circuit Referenced to  $V_{CCA}$
- Low Power Consumption, 5  $\mu$ A Maximum  $I_{CC}$
- $I_{off}$  Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - A Port
    - 2000 V Human Body Model (A114-B)
    - 250 V Machine Model (A115-A)
    - 1500 V Charged-Device Model (C101)
  - B Port
    - 15 kV Human Body Model (A114-B)
    - 250 V Machine Model (A115-A)
    - 1500 V Charged-Device Model (C101)

## 2 Applications

- Handsets
- Smartphones
- Tablets
- Desktop PCs

## 3 Description

This 1-bit noninverting translator uses two separate configurable power-supply rails. The A port is designed to track  $V_{CCA}$ .  $V_{CCA}$  accepts any supply voltage from 1.2 V to 3.6 V. The B port is designed to track  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 1.65 V to 5.5 V. This allows for universal low-voltage bidirectional translation between any of the 1.2-V, 1.5-V, 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.  $V_{CCA}$  should not exceed  $V_{CCB}$ .

When the output-enable (OE) input is low, all outputs are placed in the high-impedance state.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

To ensure the high-impedance state during power up or power down, OE should be tied to GND through a pulldown resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

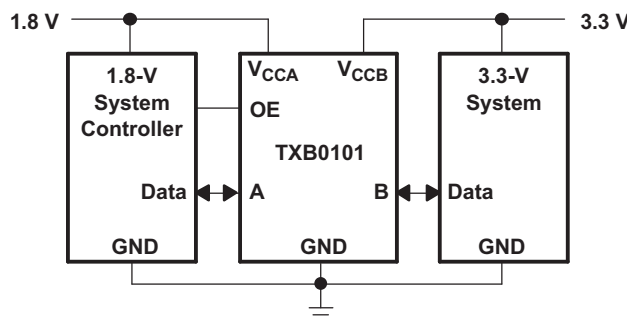

NanoFree™ package technology is a major breakthrough in IC packaging concepts, using the die as the package.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TXB0101DBV	SOT-23 (6)	2.90 mm × 1.60 mm
TXB0101DCK	SC70 (6)	2.00 mm × 1.25 mm
TXB0101DRL	SOT (6)	1.60 mm × 1.20 mm
TXB0101YZP	DSBGA (6)	1.1 mm × 1.20 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

### Typical Operating Circuit

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (June 2015) to Revision D	Page
• Added Absolute maximum junction temperature, $T_J$ in <i>Absolute Maximum Ratings</i> .....	<b>4</b>
• Added TXB0101 Port A and Port B specifications in <i>ESD Ratings</i> table .....	<b>4</b>
• Added <i>Receiving Notification of Documentation Updates</i> section .....	<b>17</b>

Changes from Revision B (May 2012) to Revision C	Page
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	<b>1</b>
• Removed <i>Ordering Information</i> table .....	<b>1</b>

Changes from Revision A (November 2008) to Revision B	Page
• Added notes to pin out graphics .....	<b>3</b>

## 5 Pin Configuration and Functions

- A. See mechanical drawings for dimensions.
- B. Pullup resistors are not required on both sides for Logic I/O.
- C. If pullup or pulldown resistors are needed, the resistor value must be over 50 kΩ.
- D. 50 kΩ is a safe recommended value, if the customer can accept higher Vol or lower Voh, smaller pullup or pulldown resistor is allowed, the draft estimation is  $V_{ol} = V_{ccout} \times 4.5 \text{ k} / (4.5 \text{ k} + R_{pu})$  and  $V_{oh} = V_{ccout} \times R_{dw} / (4.5 \text{ k} + R_{dw})$ .
- E. If pull up resistors are needed, please refer to the TXS0101 or contact TI.
- F. For detailed information, please refer to application note [SCEA043](#).

### Pin Functions

PIN		TYPE	DESCRIPTION
NO.	NAME		
1	V <sub>CCA</sub>	—	A-port supply voltage. $1.2 \text{ V} \leq V_{CCA} \leq 3.6 \text{ V}$ and $V_{CCA} \leq V_{CCB}$
2	GND	—	Ground
3	A	I/O	Input/output A. Referenced to V <sub>CCA</sub> .
4	B	I/O	Input/output B. Referenced to V <sub>CCB</sub> .
5	OE	I	3-state output enable. Pull OE low to place all outputs in 3-state mode. Referenced to V <sub>CCA</sub> .
6	V <sub>CCB</sub>	—	B-port supply voltage. $1.65 \text{ V} \leq V_{CCB} \leq 5.5 \text{ V}$

## 6 Specification

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

			MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage		−0.5	4.6	V
V <sub>CCB</sub>	Supply voltage		−0.5	6.5	
V <sub>I</sub>	Input voltage <sup>(2)</sup>		−0.5	6.5	V
V <sub>O</sub>	Voltage applied to any output in the high-impedance or power-off state <sup>(2)</sup>		−0.5	6.5	V
V <sub>O</sub>	Voltage applied to any output in the high or low state <sup>(2)</sup> (3)	A port	−0.5	V <sub>CCA</sub> + 0.5	V
		B port	−0.5	V <sub>CCB</sub> + 0.5	
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0	−50		mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0	−50		mA
I <sub>O</sub>	Continuous output current		±50		mA
	Continuous current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND		±100		mA
T <sub>JMAX</sub>	Absolute maximum junction temperature		150		°C
T <sub>stg</sub>	Storage temperature		−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative Voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The value of V<sub>CCA</sub> and V<sub>CCB</sub> are provided in the recommended operating conditions table.

### 6.2 ESD Ratings

			VALUE	UNIT
TXB0101 Port A				
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500	
TXB0101 Port B				
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±15	kV
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500	V

- (1) JEDEC document JEP155 states that 500 V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250 V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

See <sup>(1)</sup> <sup>(2)</sup>.

			V <sub>CCA</sub>	V <sub>CCB</sub>	MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage				1.2	3.6	V
					1.65	5.5	
V <sub>IH</sub>	High-level input voltage	Data inputs	1.2 V to 3.6 V	1.65 V to 5.5 V	V <sub>CCI</sub> × 0.65 <sup>(3)</sup>	V <sub>CCI</sub>	V
		OE	1.2 V to 3.6 V	1.65 V to 5.5 V	V <sub>CCA</sub> × 0.65	5.5	
V <sub>IL</sub>	Low-level input voltage	Data inputs	1.2 V to 5.5 V	1.65 V to 5.5 V	0	V <sub>CCI</sub> × 0.35 <sup>(3)</sup>	V
		OE	1.2 V to 3.6 V	1.65 V to 5.5 V	0	V <sub>CCA</sub> × 0.35	
Δt/Δv	Input transition rise or fall rate	A-port inputs	1.2 V to 3.6 V	1.65 V to 5.5 V		40	ns/V
		B-port inputs	1.2 V to 3.6 V	1.65 V to 3.6 V		40	
				4.5 V to 5.5 V		30	
T <sub>A</sub>	Operating free-air temperature				−40	85	°C

- (1) The A and B sides of an unused data I/O pair must be held in the same state, i.e., both at V<sub>CCI</sub> or both at GND.
- (2) V<sub>CCA</sub> must be less than or equal to V<sub>CCB</sub> and must not exceed 3.6 V.
- (3) V<sub>CCI</sub> is the supply voltage associated with the input port.

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TXB0101				UNIT
		DBV (SOT-23)	DCK (SC70)	DRL (SOT)	YZP (DSBGA)	
		6 PINS	6 PINS	6 PINS	6 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	192.3	266.9	204.2	105.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	164.8	80.4	76.4	1.6	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	38.6	99.1	38.7	10.8	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	43.7	1.5	3.4	3.1	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	38.1	98.3	38.5	10.8	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

PARAMETER		TEST CONDITIONS	V <sub>CCA</sub>	V <sub>CCB</sub>	T <sub>A</sub> = 25°C			−40°C to 85°C			UNIT

## 6.17 Typical Characteristics

**Figure 1. Input Capacitance for OE pin ( $C_i$ ) vs Power Supply ( $V_{CCA}$ )**

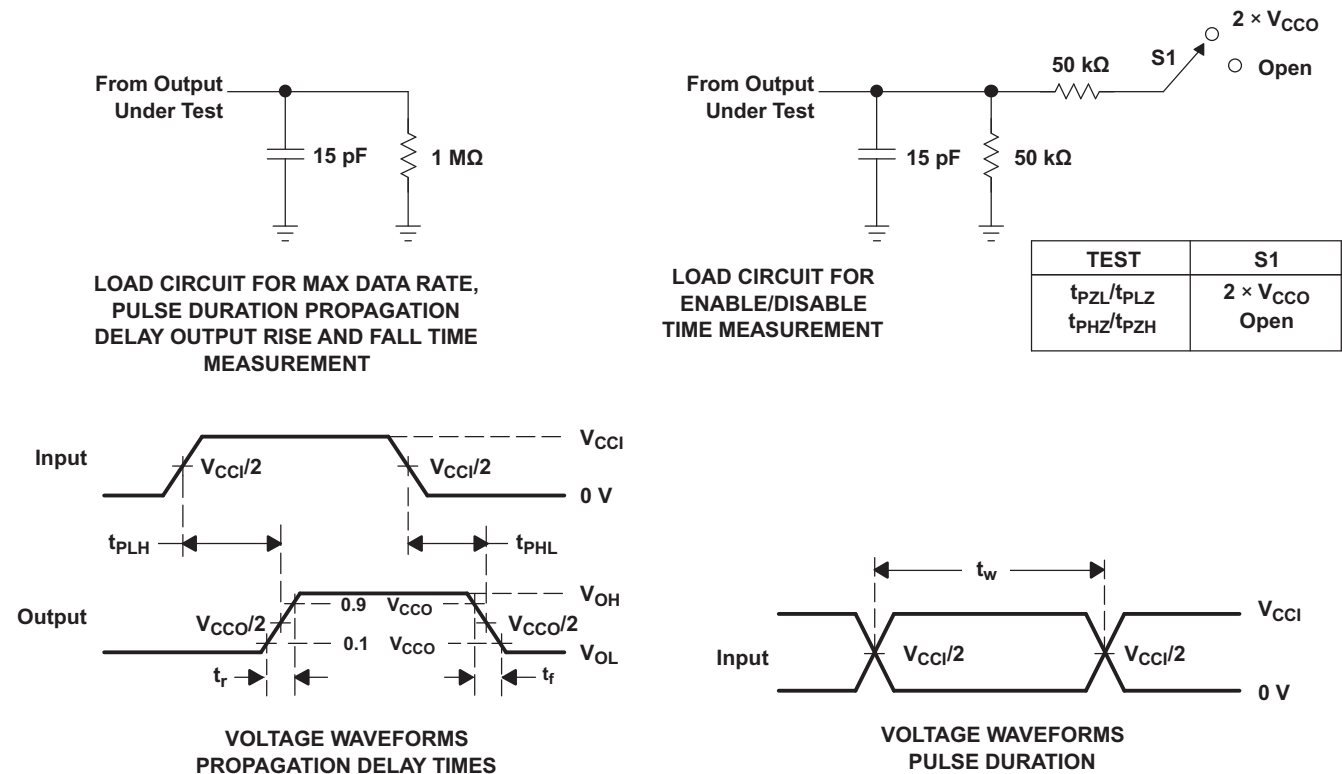

**Figure 2. Capacitance for A Port I/O Pins ( $C_{IO}$ ) vs Power Supply ( $V_{CCA}$ )**

**Figure 3. Capacitance for B Port I/O Pins ( $C_{IO}$ ) vs Power Supply ( $V_{CCB}$ )**

## 7 Parameter Measurement Information

- A.  $C_L$  includes probe and jig capacitance.
- B. All input pulses are supplied by generators having the following characteristics: PRR = 10 MHz,  $Z_O = 50 \Omega$ ,  $dv/dt \geq 1 \text{ V/ns}$ .
- C. The outputs are measured one at a time, with one transition per measurement.
- D.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
- E.  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
- F.  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.
- G. All parameters and waveforms are not applicable to all devices.

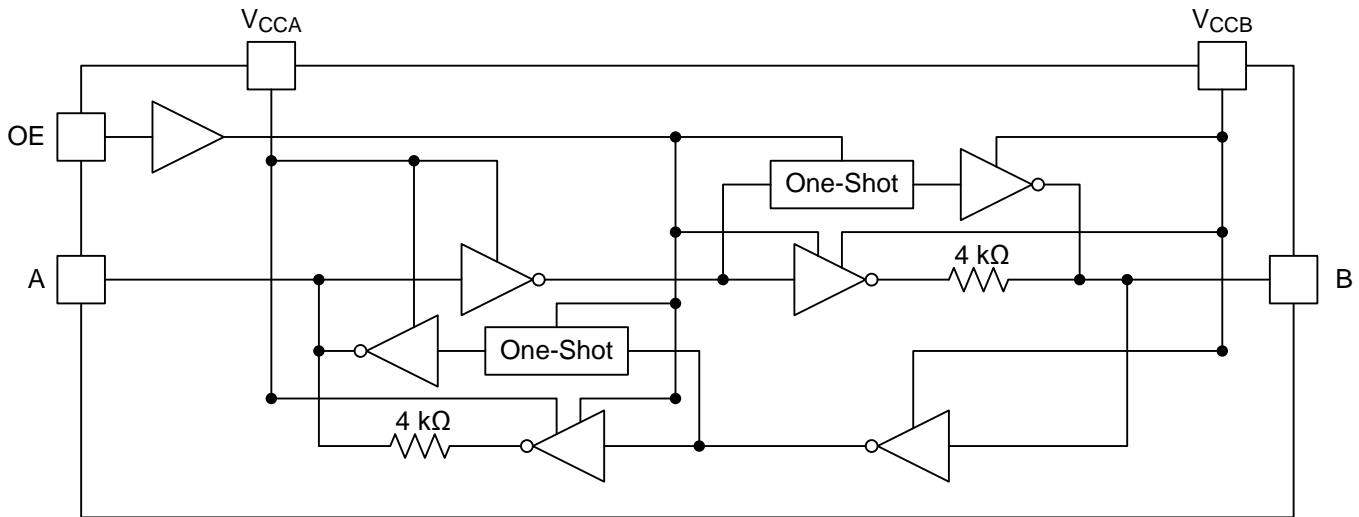

**Figure 4. Load Circuits and Voltage Waveforms**

## 8 Detailed Description

### 8.1 Overview

The TXB0101 device is a 1-bit directionless level-shifting and voltage translator specifically designed for translating logic voltage levels. The A port accepts I/O voltages ranging from 1.2 V to 3.6 V, while the B port is able to accept I/O voltages from 1.65 V to 5.5 V. The device is a buffered architecture with edge rate accelerators (one-shots) to improve the overall data rate. This device can only translate push-pull CMOS logic outputs. If for open-drain signal translation, see TI [TXS010X](#) products.

### 8.2 Functional Block Diagram

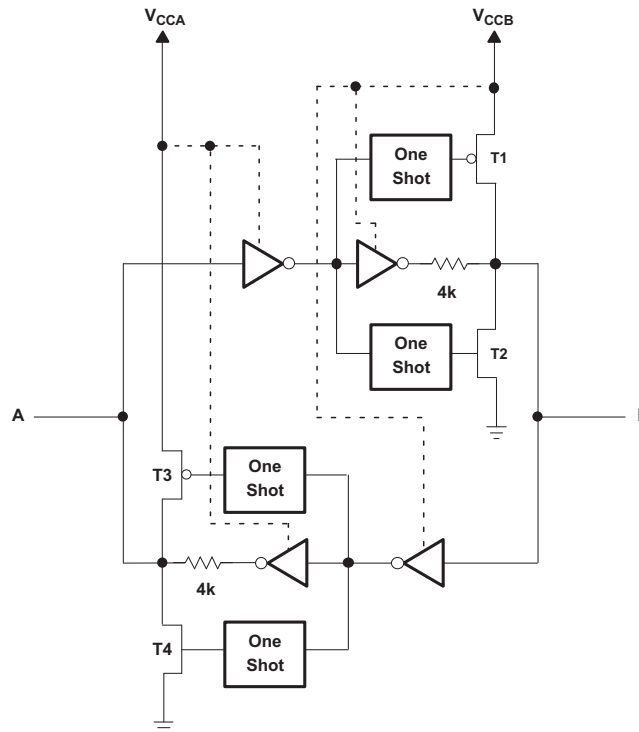

### 8.3 Feature Description

#### 8.3.1 Architecture

The TXB0101 architecture (see [Figure 5](#)) does not require a direction-control signal to control the direction of data flow from A to B or from B to A. In a DC state, the output drivers of the TXB0101 can maintain a high or low, but are designed to be weak, so that they can be overdriven by an external driver when data on the bus starts flowing the opposite direction.

The output one-shots detect rising or falling edges on the A or B ports. During a rising edge, the one-shot turns on the PMOS transistors (T1, T3) for a short duration, which speeds up the low-to-high transition. Similarly, during a falling edge, the one-shot turns on the NMOS transistors (T2, T4) for a short duration, which speeds up the high-to-low transition. The typical output impedance during output transition is 70  $\Omega$  at  $V_{CCO} = 1.2$  V to 1.8 V, 50  $\Omega$  at  $V_{CCO} = 1.8$  V to 3.3 V, and 40  $\Omega$  at  $V_{CCO} = 3.3$  V to 5 V.

## Feature Description (continued)

**Figure 5. Architecture of TXB0101 I/O Cell**

### 8.3.2 Power Up

During operation, ensure that  $V_{CCA} \leq V_{CCB}$  at all times. During power up sequencing,  $V_{CCA} \geq V_{CCB}$  does not damage the device, so any power supply can be ramped up first. The TXB0101 has circuitry that disables all output ports when either  $V_{CC}$  is switched off ( $V_{CCA/B} = 0$  V) and are placed in high-impedance state.

### 8.3.3 Enable and Disable

The TXB0101 has an OE input that is used to disable the device by setting OE = low, which places all I/Os in the high-impedance (Hi-Z) state. The disable time ( $t_{dis}$ ) indicates the delay between when OE goes low and when the outputs are actually disabled (Hi-Z). The enable time ( $t_{en}$ ) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

### 8.3.4 Pullup or Pulldown Resistors on I/O Lines

The TXB0101 is designed to drive capacitive loads of up to 70 pF. The output drivers of the TXB0101 have low-DC drive strength. If pullup or pulldown resistors are connected externally to the data I/Os, their values must be kept higher than 50 k $\Omega$  to ensure that they do not contend with the output drivers of the TXB0101.

For the same reason, the TXB0101 should not be used in applications such as I<sup>2</sup>C or 1-Wire where an open-drain driver is connected on the bidirectional data I/O. For these applications, use a device from the TI [TXS010X](#) series of level translators.

## 8.4 Device Functional Modes

The TXB0101 device has two functional modes, enabled and disabled. To disable the device set the OE input low, which places all I/Os in a high-impedance state. Setting the OE input high will enable the device.

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The TXB0101 can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. It can only translate push-pull CMOS logic outputs. If for open-drain signal translation, see TI [TXS010X](#) products. Any external pulldown or pullup resistors are recommended larger than 50 kΩ.

### 9.2 Typical Application

**Figure 6. Typical Application Circuit**

#### 9.2.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#). And make sure that  $V_{CCA} \leq V_{CCB}$ .

**Table 1. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.2 V to 3.6 V
Output voltage range	1.65 V to 5.5 V

### 9.2.1.1 Input Driver Requirements

Typical  $I_{IN}$  vs  $V_{IN}$  characteristics of the TXB0101 are shown in Figure 7. For proper operation, the device driving the data I/Os of the TXB0101 must have drive strength of at least  $\pm 2$  mA.

- A.  $V_T$  is the input threshold voltage of the TXB0101 (typically  $V_{CC}/2$ ).  
B.  $V_D$  is the supply voltage of the external driver.

**Figure 7. Typical  $I_{IN}$  vs  $V_{IN}$  Curve**

### 9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
  - Use the supply voltage of the device that is driving the TXB0101 device to determine the input voltage range. For a valid logic HIGH the value must exceed the  $V_{IH}$  of the input port. For a valid logic LOW the value must be less than the  $V_{IL}$  of the input port.
- Output voltage range
  - Use the supply voltage of the device that the TXB0101 device is driving to determine the output voltage range.
  - External pullup or pulldown resistors are not recommended. If mandatory, TI recommends the value should be larger than 50 kΩ.
- An external pulldown or pullup resistor decreases the output  $V_{OH}$  and  $V_{OL}$ . Use Equation 1 and Equation 2 to draft estimate the  $V_{OH}$  and  $V_{OL}$  as a result of an external pulldown and pullup resistor.

$$V_{OH} = V_{CCX} \times R_{PD} / (R_{PD} + 4.5 \text{ k}\Omega) \quad (1)$$

$$V_{OL} = V_{CCX} \times 4.5 \text{ k}\Omega / (R_{PU} + 4.5 \text{ k}\Omega)$$

where

- $V_{CCX}$  is the output port supply voltage on either  $V_{CCA}$  or  $V_{CCB}$
  - $R_{PD}$  is the value of the external pulldown resistor
  - $R_{PU}$  is the value of the external pullup resistor
  - 4.5 kΩ is the counting the variation of the serial resistor 4 kΩ in the I/O line.
- (2)

### 9.2.3 Application Curve

$V_{CCA} = 1.8 \text{ V}$  (waveform captured at pin 3)

$V_{CCB} = 3.3 \text{ V}$  (Waveform captured at pin 4)

**Figure 8. Level-Translation of a 2.5-MHz Signal**

## 10 Power Supply Recommendations

During operation, ensure that  $V_{CCA} \leq V_{CCB}$  at all times. During power up sequencing,  $V_{CCA} \geq V_{CCB}$  does not damage the device, so any power supply can be ramped up first. The TXB0101 has circuitry that disables all output ports when either  $V_{CC}$  is switched off ( $V_{CCA/B} = 0$  V). The output-enable (OE) input circuit is designed so that it is supplied by  $V_{CCA}$  and when the (OE) input is low, all outputs are placed in the high-impedance state. To ensure the high-impedance state of the outputs during power up or power down, the OE input pin must be tied to GND through a pulldown resistor and must not be enabled until  $V_{CCA}$  and  $V_{CCB}$  are fully ramped and stable. The minimum value of the pulldown resistor to ground is determined by the current-sourcing capability of the driver

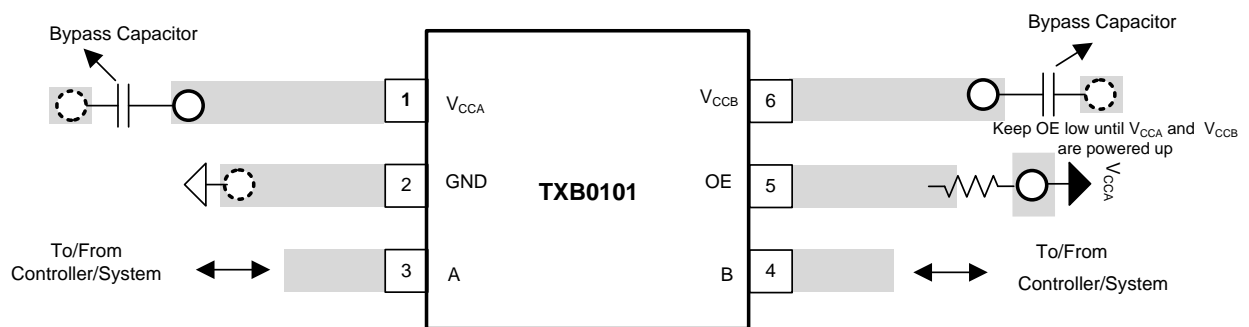

## 11 Layout

### 11.1 Layout Guidelines

To ensure reliability of the device, following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies. And should be placed as close as possible to the  $V_{CCA}$ ,  $V_{CCB}$  pin and GND pin.
- Short trace lengths should be used to avoid excessive loading.
- PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one shot duration, approximately 10 ns, ensuring that any reflection encounters low impedance at the source driver.

### 11.2 Layout Example

**Figure 9. Layout Example Recommendation**

## 12 Device and Documentation Support

### 12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.3 Trademarks

NanoFree, E2E are trademarks of Texas Instruments.  
All other trademarks are the property of their respective owners.

### 12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
