

8-Bit I/O Expander with Serial Interface

Features

- AEC-Q100 Qualified
- 8-Bit Remote Bidirectional I/O Port (Pin GP7 is output only for **MCP23008**)
 - I/O pins default to input
- High-Speed I²C Interface (**MCP23008**)
 - 100 kHz
 - 400 kHz
 - 1.7 MHz
- High-Speed SPI Interface (**MCP23S08**)
 - 10 MHz
- Hardware Address Pins
 - Three for the MCP23008 to allow up to eight devices on the bus
 - Two for the MCP23S08 to allow up to four devices using the same Chip Select
- Configurable Interrupt Output Pin
 - Configurable as active-high, active-low or open-drain

- Configurable Interrupt Source
 - Interrupt-on-change from configured defaults or pin change
- Polarity Inversion Register to Configure the Polarity of the Input Port Data
- External Reset Input
- Low Standby Current: 1 μ A (max.)
- Operating Voltage:
 - 1.8V to 5.5V at -40°C to +85°C
I²C at 100 kHz
SPI at 5 MHz
 - 2.7V to 5.5V at -40°C to +85°C
I²C at 400 kHz
SPI at 10 MHz
 - 4.5V to 5.5V at -40°C to +125°C
I²C at 1.7 MHz
SPI at 10 MHz

Packages

- 18-pin PDIP (300 mil)
- 18-pin SOIC (300 mil)
- 20-pin SSOP
- 20-pin QFN

Package Types

MCP23008/MCP23S08

Package Types: (Continued)

MCP23008/MCP23S08

1.0 DEVICE OVERVIEW

MCP23X08 device provides 8-bit, general purpose, parallel I/O expansion for I²C bus or SPI applications. The two devices differ in the number of hardware address pins and the serial interface:

- MCP23008 – I²C interface; three address pins
- MCP23S08 – SPI interface; two address pins

MCP23X08 consists of multiple 8-bit Configuration registers for input, output and polarity selection. The system host can enable the I/Os as either inputs or outputs by writing the I/O Configuration bits. The data for each input or output is kept in the corresponding Input or Output register. The polarity of the Input Port register can be inverted with the Polarity Inversion register. All registers can be read by the system host.

The interrupt output can be configured to activate under two conditions (mutually exclusive):

1. When any input state differs from its corresponding Input Port register state, this is used to indicate to the system host that an input state has changed.
2. When an input state differs from a preconfigured register value (DEFVAL register).

The Interrupt Capture register captures port values at the time of the interrupt, thereby saving the condition that caused the interrupt.

The Power-on Reset (POR) sets the registers to their default values and initializes the device state machine.

The hardware address pins are used to determine the device address.

1.1 Pin Descriptions

TABLE 1-1: PINOUT DESCRIPTION

Pin Name	PDIP/ SOIC	QFN	SSOP	Pin Type	Function
SCL/SCK	1	19	1	I	Serial clock input.
SDA/SI	2	20	2	I/O	Serial data I/O (MCP23008)/Serial data input (MCP23S08).
A2/SO	3	1	3	I/O	Hardware address input (MCP23008)/ Serial data output (MCP23S08). A2 must be biased externally.
A1	4	2	4	I	Hardware address input. Must be biased externally.
A0	5	3	5	I	Hardware address input. Must be biased externally.
RESET	6	4	6	I	External Reset input. Must be biased externally.
NC/CS	7	5	7	I	No connect (MCP23008)/External Chip Select input (MCP23S08).
INT	8	7	8	O	Interrupt output. Can be configured for active-high, active-low or open-drain.
Vss	9	17	9	P	Ground.
GP0	10	9	12	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP1	11	10	13	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP2	12	11	14	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP3	13	12	15	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP4	14	13	16	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP5	15	14	17	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP6	16	15	18	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor.
GP7	17	16	19	I/O	Bidirectional I/O pin. Can be enabled for interrupt-on-change and/or internal weak pull-up resistor. (MCP23S08)/ Output Only (MCP23008).
VDD	18	18	20	P	Power.
N/C	—	6, 8	10, 11	—	—

1.2 Power-on Reset (POR)

The on-chip POR circuit holds the device in Reset until VDD has reached a high enough voltage to deactivate the POR circuit (i.e., release the device from Reset). The maximum VDD rise time is specified in [Section 2.0, Electrical Characteristics](#).

When the device exits the POR condition (releases Reset), device operating parameters (i.e., voltage, temperature, serial bus frequency, etc.) must be met to ensure proper operation.

1.3 Serial Interface

This block handles the functionality of the I²C (MCP23008) or SPI (MCP23S08) interface protocol. The MCP23X08 contains eleven registers that can be addressed through the serial interface block ([Table 1-2](#)):

TABLE 1-2: REGISTER ADDRESSES

Address	Access to:
00h	IODIR
01h	IPOL
02h	GPINTEN
03h	DEFVAL
04h	INTCON
05h	IOCON
06h	GPPU
07h	INTF
08h	INTCAP (Read-only)
09h	GPIO
0Ah	OLAT

1.3.1 SEQUENTIAL OPERATION BIT

The Sequential Operation (SEQOP) bit (IOCON register) controls the operation of the Address Pointer. The Address Pointer can either be enabled (default) to allow the Address Pointer to increment automatically after each data transfer, or it can be disabled.

When operating in **Sequential mode** (IOCON.SEQOP = 0), the Address Pointer automatically increments to the next address after each byte is clocked.

When operating in **Byte mode** (IOCON.SEQOP = 1), the MCP23X08 does not increment its address counter after each byte during the data transfer. This gives the ability to continually read the same address by providing extra clocks (without additional control bytes). This is useful for polling the GPIO register for data changes.

1.3.2 I²C INTERFACE

1.3.2.1 I²C Write Operation

The I²C Write operation includes the control byte and register address sequence, as shown in the bottom of [Figure 1-1](#). This sequence is followed by eight bits of data from the host and an Acknowledge (ACK) from the MCP23008. The operation is ended with a STOP or RESTART condition being generated by the host.

Data is written to the MCP23008 after every byte transfer. If a STOP or RESTART condition is generated during a data transfer, the data will not be written to the MCP23008.

Byte writes and sequential writes are both supported by the MCP23008. The MCP23008 increments its address counter after each ACK during the data transfer.

1.3.2.2 I²C Read Operation

The I²C Read operation includes the control byte sequence, as shown in the bottom of [Figure 1-1](#). This sequence is followed by another control byte (including the START condition and ACK) with the R/W bit equal to a logic '1' (R/W = 1). The MCP23008 then transmits the data contained in the addressed register. The sequence is ended with the host generating a STOP or RESTART condition.

1.3.2.3 I²C Sequential Write/Read

For sequential operations (Write or Read), instead of transmitting a STOP or RESTART condition after the data transfer, the host clocks the next byte pointed to by the Address Pointer (see [Section 1.3.1 "Sequential Operation Bit"](#) for details regarding sequential operation control).

The sequence ends with the host sending a STOP or RESTART condition.

The MCP23008 Address Pointer will roll over to address zero after reaching the last register address. Refer to [Figure 1-1](#).

1.3.3 SPI INTERFACE

1.3.3.1 SPI Write Operation

The SPI Write operation is started by lowering $\overline{CS}$. The Write command (client address with R/W bit cleared) is then clocked into the device. The opcode is followed by an address and at least one data byte.

1.3.3.2 SPI Read Operation

The SPI Read operation is started by lowering $\overline{CS}$. The SPI Read command (client address with R/W bit set) is then clocked into the device. The opcode is followed by an address, with at least one data byte being clocked out of the device.

FIGURE 1-1: MCP23008 I²C Device Protocol.

1.3.3.3 SPI Sequential Write/Read

For sequential operations, instead of deselecting the device by raising $\overline{CS}$, the host clocks the next byte pointed to by the Address Pointer.

The sequence ends by the raising of $\overline{CS}$.

The MCP23S08 Address Pointer will roll over to address zero after reaching the last register address.

1.4 Hardware Address Decoder

The hardware address pins are used to determine the device address. To address a device, the corresponding address bits in the control byte must match the pin state.

- MCP23008 has address pins A2, A1 and A0.
- MCP23S08 has address pins A1 and A0.

The pins must be biased externally.

1.4.1 ADDRESSING I²C DEVICES (MCP23008)

The MCP23008 is a client I²C device that supports 7-bit client addressing, with the read/write bit filling out the control byte. The client address contains four fixed bits and three user-defined hardware address bits (pins A2, A1 and A0). [Figure 1-2](#) shows the control byte format.

1.4.2 ADDRESSING SPI DEVICES (MCP23S08)

The MCP23S08 is a client SPI device. The client address contains five fixed bits and two user-defined hardware address bits (pins A1 and A0), with the read/write bit filling out the control byte. [Figure 1-3](#) shows the control byte format.

FIGURE 1-3: SPI Control Byte Format.

FIGURE 1-2: I²C Control Byte Format.

FIGURE 1-4: I²C Addressing Registers.

FIGURE 1-5: SPI Addressing Registers.

MCP23008/MCP23S08

1.5 GPIO Port

The GPIO module contains the data port (GPIO), internal pull-up resistors and the Output Latches (OLAT).

Reading the GPIO register reads the value on the port. Reading the OLAT register only reads the OLAT, not the actual value on the port.

Writing to the GPIO register actually causes a write to the OLAT. Writing to the OLAT register forces the associated output drivers to drive to the level in OLAT. Pins configured as inputs turn off the associated output driver and put it in high-impedance.

1.6 Configuration and Control Registers

The Configuration and Control blocks contain the registers as shown in [Table 1-3](#).

TABLE 1-3: CONFIGURATION AND CONTROL REGISTERS

Register Name	Address (hex)	bit 7	bit 6	bit 5	bit 4	bit 3	bit 2	bit 1	bit 0	POR/RST value
IODIR	00	IO7	IO6	IO5	IO4	IO3	IO2	IO1	IO0	1111 1111
IPOL	01	IP7	IP6	IP5	IP4	IP3	IP2	IP1	IP0	0000 0000
GPINTEN	02	GPINT7	GPINT6	GPINT5	GPINT4	GPINT3	GPINT2	GPINT1	GPINT0	0000 0000
DEFVAL	03	DEF7	DEF6	DEF5	DEF4	DEF3	DEF2	DEF1	DEF0	0000 0000
INTCON	04	IOC7	IOC6	IOC5	IOC4	IOC3	IOC2	IOC1	IOC0	0000 0000
IOCON	05	—	—	SREAD	DISSLW	HAEN*	ODR	INTPOL	—	--00 000-
GPPU	06	PU7	PU6	PU5	PU4	PU3	PU2	PU1	PU0	0000 0000
INTF	07	INT7	INT6	INT5	INT4	INT3	INT2	INT1	INT0	0000 0000

GPIO	09	GP7	GP6	GP5	GP4	GP3	GP2	GP1	GP0	0000 0000
OLAT	0A	OL7	OL6	OL5	OL4	OL3	OL2	OL1	OL0	0000 0000

* Not used on the MCP23008.

1.6.1 I/O DIRECTION (IODIR) REGISTER

Controls the direction of the data I/O.

When a bit is set, the corresponding pin becomes an input. When a bit is clear, the corresponding pin becomes an output.

REGISTER 1-1: IODIR – I/O DIRECTION REGISTER (ADDR 0x00)

R/W-1	R/W-1	R/W-1	R/W-1	R/W-1	R/W-1	R/W-1	R/W-1
IO7	IO6	IO5	IO4	IO3	IO2	IO1	IO0
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-0

IO7:IO0: These bits control the direction of data I/O [7:0]

1 = Pin is configured as an input

0 = Pin is configured as an output

Note: For MCP23008, IO7 must be set via I²C interface to "0" (output).

MCP23008/MCP23S08

1.6.2 INPUT POLARITY (IPOL) REGISTER

The IPOL register allows the user to configure the polarity on the corresponding GPIO port bits.

If a bit is set, the corresponding GPIO register bit will reflect the inverted value on the pin.

REGISTER 1-2: IPOL – INPUT POLARITY PORT REGISTER (ADDR 0x01)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
IP7	IP6	IP5	IP4	IP3	IP2	IP1	IP0
bit 7							bit 0

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 7-0 **IP7:IP0:** These bits control the polarity inversion of the input pins [7:0]
1 = GPIO register bit will reflect the opposite logic state of the input pin
0 = GPIO register bit will reflect the same logic state of the input pin

1.6.3 INTERRUPT-ON-CHANGE CONTROL (GPINTEN) REGISTER

The GPINTEN register controls the interrupt-on-change feature for each pin.

If a bit is set, the corresponding pin is enabled for interrupt-on-change. The DEFVAL and INTCON registers must also be configured if any pins are enabled for interrupt-on-change.

REGISTER 1-3: GPINTEN – INTERRUPT-ON-CHANGE PINS (ADDR 0x02)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
GPINT7	GPINT6	GPINT5	GPINT4	GPINT3	GPINT2	GPINT1	GPINT0
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-0

GPINT7:GPINT0: General Purpose I/O Interrupt-on-Change [7:0]

1 = Enable GPIO input pin for interrupt-on-change event

0 = Disable GPIO input pin for interrupt-on-change event

Refer to INTCON and GPINTEN.

MCP23008/MCP23S08

1.6.4 DEFAULT COMPARE (DEFVAL) REGISTER FOR INTERRUPT-ON-CHANGE

The default comparison value is configured in the DEFVAL register. If enabled (via GPINTEN and INTCON) to compare against the DEFVAL register, an opposite value on the associated pin will cause an interrupt to occur.

REGISTER 1-4: DEFVAL – DEFAULT VALUE REGISTER (ADDR 0x03)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
DEF7	DEF6	DEF5	DEF4	DEF3	DEF2	DEF1	DEF0
bit 7							bit 0

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 7-0 **DEF7:DEF0:** These bits set the compare value for pins configured for interrupt-on-change from defaults [7:0]. Refer to INTCON.
If the associated pin level is the opposite from the register bit, an interrupt occurs.

Refer to INTCON and GPINTEN.

1.6.5 INTERRUPT CONTROL (INTCON) REGISTER

The INTCON register controls how the associated pin value is compared for the interrupt-on-change feature. If a bit is set, the corresponding I/O pin is compared against the associated bit in the DEFVAL register. If a bit value is clear, the corresponding I/O pin is compared against the previous value.

REGISTER 1-5: INTCON – INTERRUPT-ON-CHANGE CONTROL REGISTER (ADDR 0x04)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
IOC7	IOC6	IOC5	IOC4	IOC3	IOC2	IOC1	IOC0
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-0 **IOC7:IOC0:** These bits control how the associated pin value is compared for interrupt-on-change [7:0]
1 = Controls how the associated pin value is compared for interrupt-on-change
0 = Pin value is compared against the previous pin value

Refer to INTCON and GPINTEN.

MCP23008/MCP23S08

1.6.6 CONFIGURATION (IOCON) REGISTER

The IOCON register contains several bits for configuring the device:

- The Sequential Operation (SEQOP) controls the incrementing function of the Address Pointer. If the Address Pointer is disabled, the Address Pointer does not automatically increment after each byte is clocked during a serial transfer. This feature is useful when it is desired to continuously poll (read) or modify (write) a register.
- The Slew Rate (DISSLW) bit controls the slew rate function on the SDA pin. If enabled, the SDA slew rate will be controlled when driving from a high to a low.
- The Hardware Address Enable (HAEN) control bit enables/disables the hardware address pins (A1, A0) on the MCP23S08. This bit is not used on the MCP23008. The address pins are always enabled on the MCP23008.
- The Open-Drain (ODR) control bit enables/disables the INT pin for open-drain configuration.
- The Interrupt Polarity (INTPOL) control bit sets the polarity of the INT pin. This bit is functional only when the ODR bit is cleared, configuring the INT pin as active push-pull.

REGISTER 1-6: IOCON – I/O EXPANDER CONFIGURATION REGISTER (ADDR 0x05)

U-0	U-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	U-0
—	—	SEQOP	DISSLW	HAEN	ODR	INTPOL	—
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-6 **Unimplemented:** Read as '0'

bit 5 **SEQOP:** Sequential Operation Mode

1 = Sequential operation disabled, Address Pointer does not increment

0 = Sequential operation enabled, Address Pointer increments

bit 4 **DISSLW:** Slew Rate Control Bit for SDA Output

1 = Slew rate disabled

0 = Slew rate enabled

bit 3 **HAEN:** Hardware Address Enable (MCP23S08 only)

Address pins are always enabled on MCP23008.

1 = Enables the MCP23S08 address pins

0 = Disables the MCP23S08 address pins

bit 2 **ODR:** This bit configures the INT pin as an open-drain output

1 = Open-drain output (overrides the INTPOL bit)

0 = Active driver output (INTPOL bit sets the polarity)

bit 1 **INTPOL:** This bit sets the polarity of the INT output pin

1 = Active-high

0 = Active-low

bit 0 **Unimplemented:** Read as '0'

1.6.7 PULL-UP RESISTOR CONFIGURATION (GPPU) REGISTER

The GPPU register controls the pull-up resistors for the PORT pins. If a bit is set and the corresponding pin is configured as an input, the corresponding PORT pin is internally pulled up with a 100 k Ω resistor.

REGISTER 1-7: GPPU – GPIO PULL-UP RESISTOR REGISTER (ADDR 0x06)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
PU7	PU6	PU5	PU4	PU3	PU2	PU1	PU0
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-0

PU7:PU0: These bits control the weak pull-up resistors on each pin (when configured as an input) [7:0]

1 = Pull-up enabled

0 = Pull-up disabled

MCP23008/MCP23S08

1.6.8 INTERRUPT FLAG (INTF) REGISTER

The INTF register reflects the interrupt condition on the PORT pins of any pin that is enabled for interrupts via the GPINTEN register. A ‘set’ bit indicates that the associated pin caused the interrupt.

This register is ‘read-only’. Writes to this register will be ignored.

Note: INTF will always reflect the pin(s) that have an interrupt condition. For example, one pin causes an interrupt to occur and is captured in INTCAP and INF. If before clearing the interrupt another pin changes, which would normally cause an interrupt, it will be reflected in INTF, but not INTCAP.

REGISTER 1-8: INTF – INTERRUPT FLAG REGISTER (ADDR 0x07)

R-0	R-0	R-0	R-0	R-0	R-0	R-0	R-0
INT7	INT6	INT5	INT4	INT3	INT2	INT1	INT0
bit 7							bit 0

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as ‘0’	
-n = Value at POR	‘1’ = Bit is set	‘0’ = Bit is cleared	x = Bit is unknown

bit 7-0 **INT7:INT0:** These bits reflect the interrupt condition on the port. Will reflect the change only if interrupts are enabled (GPINTEN) [7:0].
1 = Pin caused interrupt
0 = Interrupt not pending

1.6.9 INTERRUPT CAPTURE (INTCAP) REGISTER

The INCAP register captures the GPIO port value at the time the interrupt occurred. The register is 'read-only' and is updated only when an interrupt occurs. The register will remain unchanged until the interrupt is cleared via a read of INCAP or GPIO.

REGISTER 1-9: INCAP – INTERRUPT CAPTURED VALUE FOR PORT REGISTER (ADDR 0x08)

R-x	R-x	R-x	R-x	R-x	R-x	R-x	R-x
ICP7	ICP6	ICP5	ICP4	ICP3	ICP2	ICP1	ICP0
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-0

ICP7:ICP0: These bits reflect the logic level on the PORT pins at the time of interrupt due to pin change [7:0]

1 = Logic-high

0 = Logic-low

MCP23008/MCP23S08

1.6.10 PORT (GPIO) REGISTER

The GPIO register reflects the value on the port. Reading from this register reads the port. Writing to this register modifies the Output Latch (OLAT) register.

REGISTER 1-10: GPIO – GENERAL PURPOSE I/O PORT REGISTER (ADDR 0x09)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
GP7	GP6	GP5	GP4	GP3	GP2	GP1	GP0
bit 7							bit 0

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 7-0 **GP7:GP0:** These bits reflect the logic level on the pins [7:0]
1 = Logic-high
0 = Logic-low

1.6.11 OUTPUT LATCH REGISTER (OLAT)

The OLAT register provides access to the output latches. A read from this register results in a read of the OLAT and not the port itself. A write to this register modifies the output latches that modify the pins configured as outputs.

REGISTER 1-11: OLAT – OUTPUT LATCH REGISTER 0 (ADDR 0x0A)

R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
OL7	OL6	OL5	OL4	OL3	OL2	OL1	OL0
bit 7							bit 0

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 7-0

OL7:OL0: These bits reflect the logic level on the output latch [7:0]

1 = Logic-high

0 = Logic-low

MCP23008/MCP23S08

1.7 Interrupt Logic

The interrupt output pin will activate if an internal interrupt occurs. The interrupt block is configured by the following registers:

- GPINTEN – enables the individual inputs
- DEFVAL – holds the values that are compared against the associated input port values
- INTCON – controls if the input values are compared against DEFVAL or the previous values on the port
- IOCON (ODR and INPOL) – configures the INT pin as push-pull, open-drain and active-level

Only pins configured as inputs can cause interrupts. Pins configured as outputs have no effect on INT.

Interrupt activity on the port will cause the port value to be captured and copied into INTCAP. The interrupt will remain active until the INTCAP or GPIO register is read. Writing to these registers will not affect the interrupt.

The first interrupt event will cause the port contents to be copied into the INTCAP register. Subsequent interrupt conditions on the port will not cause an interrupt to occur as long as the interrupt is not cleared by a read of INTCAP or GPIO.

1.7.1 INTERRUPT CONDITIONS

There are two possible configurations to cause interrupts (configured via INTCON):

1. Pins configured for **interrupt-on-pin-change** will cause an interrupt to occur if a pin changes to the opposite state. The default state is reset after an interrupt occurs. For example, an interrupt occurs by an input changing from '1' to '0'. The new initial state for the pin is a logic '0'.
2. Pins configured for **interrupt-on-change from register value** will cause an interrupt to occur if the corresponding input pin differs from the register bit. The interrupt condition will remain as long as the condition exists, regardless if the INTAP or GPIO is read.

See [Figure 1-6](#) and [Figure 1-7](#) for more information on interrupt operations.

FIGURE 1-6: *Interrupt-on-Pin-Change.*

FIGURE 1-7: *Interrupt-on-Change from Register Default.*

2.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

Ambient temperature under bias	-40°C to +125°C
Storage temperature	-65°C to +150°C
Voltage on VDD with respect to VSS	-0.3V to +5.5V
Voltage on all other pins with respect to VSS (except VDD)	-0.6V to (VDD + 0.6V)
Total power dissipation (Note)	700 mW
Maximum current out of VSS pin	150 mA
Maximum current into VDD pin	125 mA
Input clamp current, I _{IK} (V _I < 0 or V _I > VDD)	±20 mA
Output clamp current, I _{OK} (V _O < 0 or V _O > VDD)	±20 mA
Maximum output current sunk by any output pin	25 mA
Maximum output current sourced by any output pin	25 mA

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

Note: Power dissipation is calculated as follows:
 $P_{DIS} = V_{DD} \times \{I_{DD} - \sum I_{OH}\} + \sum \{(V_{DD} - V_{OH}) \times I_{OH}\} + \sum (V_{OL} \times I_{OL})$

TABLE 2-1: DC Characteristics

DC Characteristics		Operating Conditions (unless otherwise indicated): 1.8V ≤ VDD ≤ 5.5V at -40°C ≤ TA ≤ +85°C (I-Temp) 4.5V ≤ VDD ≤ 5.5V at -40°C ≤ TA ≤ +125°C (E-Temp) (Note 1)

3.0 PACKAGING INFORMATION

3.1 Package Marking Information

18-Lead PDIP (300 mil)

Example:

18-Lead SOIC (300 mil)

Example:

20-Lead QFN

Example:

20-Lead SSOP

Example:

Legend:	XX...X	Product code or customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC® designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.
	•, ▲, ▼	Pin one index is identified by a dot, delta up, or delta down (triangle mark).

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information. Package may or may not include the corporate logo.
Underbar (_) and/or Overbar (¯) symbol may not be to scale.

MCP23008/MCP23S08

18-Lead Plastic Dual In-Line (P) – 300 mil Body [PDIP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

MCP23008/MCP23S08

20-Lead Plastic Shrink Small Outline (SS) - 5.30 mm Body [SSOP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

		Units	MILLIMETERS		
Dimension Limits			MIN	NOM	MAX
Number of Pins	N		20		
Pitch	e		0.65 BSC		
Overall Height	A		-	-	2.00
Molded Package Thickness	A2		1.65	1.75	1.85
Standoff	A1		0.05	-	-
Overall Width	E		7.40	7.80	8.20
Molded Package Width	E1		5.00	5.30	5.60
Overall Length	D		6.90	7.20	7.50
Foot Length	L		0.55	0.75	0.95
Footprint	L1		1.25 REF		
Lead Thickness	c		0.09	-	0.25
Foot Angle	ϕ		0°	4°	8°
Lead Width	b		0.22	-	0.38

Notes:

1. Pin 1 visual index feature may vary, but must be located within the hatched area.
2. Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.20mm per side.
3. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing C04-072 Rev C Sheet 2 of 2

20-Lead Plastic Shrink Small Outline (SS) - 5.30 mm Body [SSOP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

RECOMMENDED LAND PATTERN

		Units	MILLIMETERS		
Dimension Limits			MIN	NOM	MAX
Contact Pitch	E		0.65 BSC		
Contact Pad Spacing	C			7.00	
Contact Pad Width (X20)	X1				0.45
Contact Pad Length (X20)	Y1				1.85
Contact Pad to Center Pad (X18)	G1		0.20		

Notes:

- Dimensioning and tolerancing per ASME Y14.5M
BSC: Basic Dimension. Theoretically exact value shown without tolerances.
- For best soldering results, thermal vias, if used, should be filled or tented to avoid solder loss during reflow process

Microchip Technology Drawing C04-2072 Rev C

APPENDIX A: REVISION HISTORY

Revision I (February 2026)

- Corrected Byte and Sequential Read in [Figure 1-1](#).

Revision H (November 2025)

- Corrected drawings for MCP23008 (QFN only) and MCP23S008 (QFN only) in [Section Package Types](#).
- Updated Package Outline Drawing for the SOIC package in [Section 3.0 “Packaging Information”](#).

Revision G (June 2022)

- Updated description in [Section “Features”](#).
- Updated [Table 1-1](#).
- Corrected drawings for MCP23008 in [Section Package Types](#).
- Corrected [Section 1.6.1 “I/O Direction \(IODIR\) Register”](#)
- Corrected packages drawings in [Section 3.0 “Packaging Information”](#).
- Updated [Section “Product Identification System”](#), with Automotive Qualified devices.
- Minor text and format changes throughout.

Revision F (March 2019)

- Updated the QFN package drawing in [Section Package Types](#).
- Updated [Section 3.0 “Packaging Information”](#).
- Minor typographical edits.

Revision E (August 2007)

- [Section 3.0 “Packaging Information”](#): Updated package outline drawings.

Revision D (February 2007)

- Changed Byte and Sequential Read in [Figure 1-1](#) from “R” to “W”.
- Table 2-4, Param No. 51 and 53: Changed from 450 to 600 and 500 to 600, respectively.
- Added disclaimer to package outline drawings.
- Updated package outline drawings.

Revision C (October 2006)

- Added 20-pin QFN package information throughout document.
- Added disclaimer to package outline drawings.

Revision B (February 2005)

- [Section 1.6 “Configuration and Control Registers”](#). Added Hardware Address Enable (HAEN) bit to Table 1-3.
- [Section 1.6.6 “Configuration \(IOCON\) Register”](#). Added Hardware Address Enable (HAEN) bit to Register 1-6.

Revision A (December 2004)

- Original release of this document.

MCP23008/MCP23S08

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>[X]⁽¹⁾</u>	<u>-X</u>	<u>/XX</u>	<u>XXX</u>	Examples:
Device	Tape and Reel Option	Temperature Range	Package	Qualification	
Device: MCP23008: 8-Bit I/O Expander w/ I ² C Interface MCP23S08: 8-Bit I/O Expander w/ SPI Interface					a) MCP23008-E/P: Extended Temperature, 18-Lead PDIP package
Tape and Reel Option: T = Tape and Reel ⁽¹⁾ Blank = Tube					b) MCP23008-E/SO: Extended Temperature, 18-Lead SOIC package
Temperature Range: E = -40°C to +125°C (Extended) *					c) MCP23008T-E/SO: Tape and Reel, Extended Temperature, 18-Lead SOIC package
* While these devices are only offered in the "E" temperature range, the device will operate at different voltages and temperatures as identified in Section 2.0 "Electrical Characteristics" .					d) MCP23008-E/SS: Extended Temperature, 20-Lead SSOP package
Package: ML = Plastic Quad Flat, No Lead Package 4x4x0.9 mm Body (QFN), 20-Lead P = Plastic DIP (300 mil Body), 18-Lead SO = Plastic SOIC (300 mil Body), 18-Lead SS = SSOP, (209 mil Body, 5.30 mm), 20-Lead					e) MCP23008T-E/SS: Tape and Reel, Extended Temperature, 20-Lead SSOP package
Qualification: <Blank> = Standard Part VAO = Automotive AEC-Q100 Qualified					f) MCP23008-E/SSVAO: Extended Temperature, 20-Lead SSOP package, Automotive Qualified
					g) MCP23008T-E/SSVAO: Tape and Reel, Extended Temperature, 20-Lead SSOP package, Automotive Qualified
					h) MCP23008-E/ML: Extended Temperature, 20-Lead QFN package
					i) MCP23S08-E/P: Extended Temperature, 18-Lead PDIP package
					j) MCP23S08-E/SO: Extended Temperature, 18-Lead SOIC package
					k) MCP23S08T-E/SO: Tape and Reel, Extended Temperature, 18-Lead SOIC package
					l) MCP23S08-E/SOVAO: Extended Temperature, 18-Lead SOIC package
					m) MCP23S08T-E/SOVAO: Tape and Reel, Extended Temperature, 18-Lead SOIC package
					n) MCP23S08-E/SS: Extended Temperature, 20-Lead SSOP package
					o) MCP23S08T-E/SS: Tape and Reel, Extended Temperature, 20-Lead SSOP package
					p) MCP23S08T-E/MF: Tape and Reel, Extended Temperature, 20-Lead QFN package
					Note 1: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is “unbreakable”. Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.
