High performance 2x2 dual-band 802.11ac Wi-Fi with MU-MIMO and Bluetooth® 4.2 radios in a single-chip solution.

Highly integrated and cost-effective Wi-Fi/Bluetooth combo solution for mobile and consumer electronics applications in a small form factor System-on-Chip (SoC).

Designed to deliver seamless integration of WLAN and Bluetooth Low Energy technology in a single-chip solution, the QCA6174A SoC offers one of the most cost-effective Wi-Fi/Bluetooth solution for mobile and consumer electronics applications.

QCA6174A supports high-speed Wi-Fi connectivity and enriched media experiences. It is optimized for energy efficiency, which is critical to extending the battery life of portable devices.

QCA6174A has integrated RF front-end and single-ended design for simpler and low-cost design.

There are three variants available for QCA6174A:

- QCA6174A-1: supports low power PCIe 2.1 (w/L1 substate) interface for WLAN and UART/PCM interface for Bluetooth.
- QCA6174A-3: supports low-power SDIO 3.0 interface for WLAN and UART/PCM interface for Bluetooth
- QCA6174A-5: supports low power PCIe 2.1 (w/L1 substate) for WLAN and USB 1.1 interface for Bluetooth.

Solution Highlights

**Advanced 802.11ac combo SoC**

Advanced 802.11ac features such as MU-MIMO and TX Beamformee to increase network capacity, as well as maximal likelihood (ML) decoding, low-density parity check (LDPC), maximum ratio combining (MRC) for robust link connection.

**Supports dual-mode Bluetooth v4.2**

QCA6174A supports Classic Bluetooth as well as Bluetooth Low Energy hub and peripheral devices.

**Integrated RF front-end single-ended design**

QCA6174A supports single-ended RF port design for a simpler and low-cost design making it a cost-effective solution for mobile and consumer electronics applications.

**Power saving techniques for low power consumption**

Both WLAN and Bluetooth power management use advanced power saving techniques such as: gating clocks to idle or inactive blocks, voltage scaling to specific blocks in certain states, fast start and settling circuits to reduce Tx, active duty cycles, processor frequency scaling, and other techniques to optimize power consumption across all operating states.
