

Features

- Bidirectional device: LBP01-0810B
- Unidirectional device: LBP01-0803SC5
- RoHS compliant

Benefits

- Keep LED strings on in case of LED open mode failure
- Reduced maintenance cost
- Increase lifetime of the lighting system

Complies with the following standards:

- IEC61000-4-2 level 4
 - ± 15 kV (air discharge)
 - ± 8 kV (contact discharge)
- IEC 61000-4-5
 - ± 1 kV / 24 A

Applications

This device shunts failed LEDs in applications where LED strings can not be turned-off for safety reason due to a LED failure. Main applications are:

- Automotive headlights
- Traffic lights
- Aircraft runaway lights
- Emergency lighting systems
- Display panel backlighting
- Street lighting

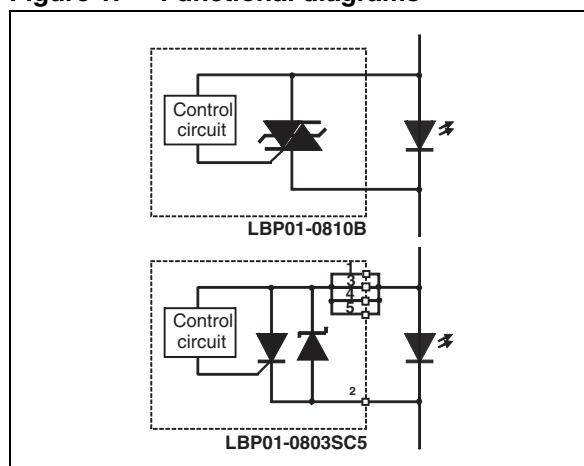

Figure 1. Functional diagrams

Description

The LBP01 series are bypass switches to be connected in parallel with 1 or 2 LEDs. In case of LED failure, this allows the current to flow through the other LEDs.

It also provides an overvoltage protection against surges defined in IEC 61000-4-2 and IEC 61000-4-5

Their robust dice also protect LEDs against surge.

These devices are compatible with LEDs up to 1 A.

LBP01 are packaged either in SMB or SOT23-5L

4 Recommendations on PCB assembly

4.1 PCB design

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

4.2 Reflow profile

Note: Minimize air convection currents in the reflow oven to avoid component movement.
