

NV73 | Multilayer Type Metal Oxide Varistors

Only NV73 2E, 2J, 2L:
Not for new designs

Body color : Black

■ Construction

■ Features

- Varistors own two-way symmetries and can absorb positive and negative surges.
- Multilayer construction allows its small size to absorb a large surge.
- Small space and high density mounting available due to the small package.
- Suitable for both flow and reflow solderings.
- Products with lead free termination meet EU-RoHS requirements. EU-RoHS regulation is not intended for Pb-glass contained in electrode, varistor element and glass.

■ Applications

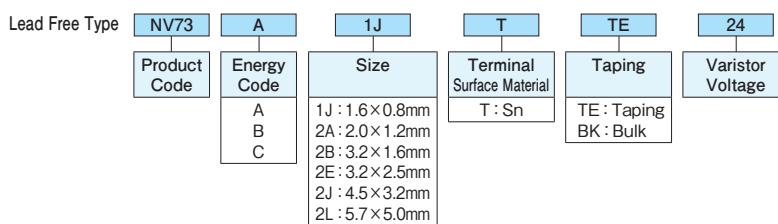

- Protection of ESD from input and output terminals of mobile devices.
- Absorption of surge voltages occurred from inductive load of motors, relays, etc.
- Protection of semiconductor elements against over voltages.
- Absorption of surge voltages generated from piezoelectric elements.

■ Type Designation

Example

The terminal surface material lead free is standard.

Contact us when you have control request for environmental hazardous material other than the substance specified by EU-RoHS.

For further information on taping, please refer to APPENDIX C on the back pages.

■ Performance (1J · 2A · 2B)

Test Items	Performance Requirements	$\Delta V \pm \%$	Test Methods
Varistor Voltage	Within specified tolerance		Voltage between terminals when 1mA is flowed.
