

45 mm x 65 mm antenna reference board with external ESD protection for the M24LR16E-R Dual Interface EEPROM

Data brief

Description

The ANT10-M24LR16E antenna reference board is a ready-to-use PCB that features an M24LR16E-R Dual Interface EEPROM IC connected to a 45 mm x 65 mm RF etched antenna, and to an I²C bus on the other side.

A DSILC6-4P6 external ESD protection is mounted on the M24LR16E-R antenna inputs to increase the ESD immunity to ESD discharges on antenna up to the IEC. 61400-4-2 class 4 level. Please refer to the application note AN4326 *“Increasing the M24LRXXE-R family ESD robustness on antenna using an external ESD protection”* for more details about implementing an external ESD protection on M24LRXX antennas.

The ANT10-M24LR16E antenna allows system designers to evaluate the M24LR16E-R performance and capabilities and to get started with their design.

To demonstrate the energy harvesting function, the ANT10-M24LR16E can be used in conjunction with the DEMO-CR95HF-A demonstration boards.

The ANT10-M24LR16E gerber files can be downloaded from <http://www.st.com>.

Associated firmware and PC software

The ANT10-M24LR16E board is supported by a PC software, the Dual Interface EEPROM tool software, that allows to configure and control the energy harvesting. This software is available from <http://www.st.com>.

Refer to application note AN3954 "*Developing your own Visual Basic or C/C++ application on a DEMO-CR95HF-A demonstration board*", for how to adapt the PC software for your application.
