Inline boost terminal for the communications power  $U_L$  of 0.8 A, complete with accessories (connectors and labeling field)

## Product description

The terminal is designed for use within an Inline station. If the maximum load of the bus coupler for the communications power  $(U_L)$  is reached, this terminal can be used to provide this voltage again. To do this, apply a 24 V DC voltage  $(U_{24V})$  to the terminal. The communications power  $(U_L)$  is generated from this voltage.

### Your advantages

• Supply of the 24 V voltage for generating the communications power (UL) up to 0.8 A
