Amphenol
High Speed Interconnects

I/O Products
THE COMPANY

Amphenol is a global provider of interconnect solutions to the designers and manufacturers of worldwide networking systems. With our design creativity and cost effectiveness, Amphenol leads the way in interconnect development for internet equipment, infrastructure, enterprise networks, and appliances. Whether industry standard or specific designs are required, Amphenol provides customers with products capable of performing at the leading edge of today’s high speed technology. Our expertise in understanding and supporting our customers’ various design needs has earned Amphenol a reputation of excellence and quality among the world’s leading users of high speed components.

HIGH SPEED CONNECTORS

Amphenol offers a full range of high speed connectors with data rates ranging from 1 Gbps to 240 Gbps and beyond, meeting our customers’ various high speed connector requirements. Products include the ExpressPort™ Series (SFP+, QSFP+, CXP), SFP, QSFP, Mini-SAS, Mini-SAS HD, XFP, CFP2, and CFP4.

BENEFITS

- Increased platform density for scaling improved performance in a defined physical space
- Servers that can scale I/O and processing power independently
- Racks of servers that can be managed as one autonomous unit
- Servers that can share I/O resources
- True “plug-and-play” I/O connectivity
- Extensive range of SFP/IPF connector and cage solutions to support Fiber Channel, Infiniband, Ethernet, and Gigabit technology
- Next generation ExpressPort™ connectors provide premium level performance for SFP+, CXP, and QSFP+ interfaces
- Data speeds of ExpressPort™ connectors can reach up to 40 Gbps per channel

Amphenol’s ExpressPort™ SFP+ 1xN connector, when combined with the ExpressPort™ SFP+ cage, provides data transfer speeds of up to 25 Gbps. The design of the ExpressPort™ SFP+ connector minimizes impedance discontinuities and reflections at high data rates, and provides a 10 to 20 dB improvement in Near-End Crosstalk.

Amphenol’s unique ExpressPort™ SFP+ cage construction features EMI shielding available in the form of metal spring fingers or elastomeric gaskets. These cages also eliminate ventilation holes near the front of the cage to prevent potential catch points for the mating module EMI springs. Additional features available include lightpipes (which can be purchased with cages or separately), heat sinks, and other custom features.

### Specification Highlights

The interconnect system is comprised of a cage assembly which is used with 20-position SFP+ connectors complying with SFF-8081 and SFF-8083. Ganged cages comply with industry standard SFF-8433.

#### General Characteristics
- RoHS Compliant
- Industry Standard Footprint
- Industry Standard EIA-364

#### Mechanical Characteristics
- Accepts Multiple Transceivers per SFF-8431
- Compliant Press-Fit Pins or Solder Tails (for 1x1 Cages)
- Durability: 250 Mating Cycles min

#### Electrical Characteristics
- Hot Swappable
- Operating Voltage: 3.3 V
- Operating Current: 0.5 A
- Differential Impedance: 100 Ω +/- 10 Ω
- DWV: 300 V AC
- Insulation Resistance: 1000 MΩ min
- Contact Resistance: 70 mΩ max

#### Packaging
- Tape and Reel Packaging: Connector or 1x1 Cage
- Tray Packaging: Cage of all Sizes
- Bulk Packaging: Dust Cover

Amphenol’s SFP interconnect system consists of a 20-position connector enclosed in a metal cage mounted to a host PCB.

Amphenol’s single port SFP connectors are rated up to 6 Gbps. The connector accepts multiple transceivers per INF-8074i and combines, transmits, and receives functions in a low cost, compact, and flexible format. The cages have a two-piece construction with enhanced transceiver mating tabs available in a press-fit version or a solder tail version. Longer and shorter pins are available as custom options. Single row versions (1xN) consist of SMT connectors used with a separate single row cage (press-fit or solder tail).

The ExpressPort™ QSFP+/QSFP interconnect system is comprised of a 38-position 0.8 mm pitch SMT connector, and a press-fit cage designed to comply with the Quad Small Form-factor Pluggable (QSFP) Transceiver intended for external connections. High speed serial interconnect applications include clusters, servers, and storage devices.

The ExpressPort™ QSFP+ E-Series and H-Series connector families are rated to 28 Gbps and 40 Gbps respectively per channel (4x28), featuring a stamped and formed contact design providing improved mechanical durability. This connector features an integrated grounding structure and resonance dampening features for superior crossstalk performance. The contact design is optimized for a smooth impedance profile resulting in improved SI performance.

**Specification Highlights**

The QSFP interconnect system is comprised of a press-fit cage assembly which is used with 38-position connectors complying with QSFP Transceiver Specifications.

Amphenol’s CXP connector comes in a one-piece press-fit assembly system with twelve channels of up to 20 Gbps, resulting in 240 Gbps of total bandwidth – the fastest and most dense I/O on the market today. This allows our CXP to go beyond the 100 Gigabit Ethernet IEEE 802.3ba and the Infiniband CXP12x QDR standards. It also enables pluggable copper or optical cables to increase the flexibility of system-level hardware for end users. The CXP interconnect system is ideal for network switches, routers, servers, and storage devices.

### Specification Highlights

The CXP interconnect system is comprised of an 84 position, 2-row press-fit connector, and a cage assembly as one unit complying with SFF-8642.

#### General Characteristics
- RoHS Compliant
- Industry Standard Footprint
- Industry Standard EIA-364

#### Mechanical Characteristics
- Insertion Force for an MSA Compliant Transceiver: 150 N max
- Unmating Force: 50 N max
- Durability: 250 Mating Cycles min

#### Electrical Characteristics
- Hot Swappable
- Operating Voltage: 30 V
- Operating Current: 0.5 A
- Differential Impedance: 100 Ω +/- 10 Ω
- DWV: 300 V AC
- Insulation Resistance: 1000 MΩ min

#### Packaging
- Tray Packaging: Cage and Connector Assembly
- Bulk Packaging: Dust Cover

#### Materials

  - Key #2 (Right) Ethernet
The Mini-SAS external I/O connector system consists of a die-cast metal cage and a Compact MultiLane SMT Connector, featuring proven “cut edge” style contacts. Providing four serial send/receive channels per port, this connector system is designed to satisfy the needs for gigabit serial data transmission applications with signal speeds across the connector interface of 6 Gbps per channel.

The cage is mounted separately to the body so that the stress imposed by insertion and removal of the cable plug does not affect the signal/body solder joints. The connector is available with unique solder hold-down tabs designed to provide additional mechanical robustness in demanding applications.

**Mechanical Characteristics**
- Co-Planarity Specification: 0.1 mm
- Connector Insertion Force: 55.5 N max
- Connector Withdrawal Force: 49.0 N max
- Durability: 250 Mating Cycles min
- Reverse Keying for Active Copper Cables per SAS 2.0

**Electrical Characteristics**
- Operating Voltage: 30 V
- Operating Current: 0.5 A
- Differential Impedance: 100 Ω +/- 10 Ω
- DWV: 300 V AC
- Insulation Resistance: 1000 MΩ min
- Contact Resistance: 80 mΩ max
- Near-End Isolation: -40 dB (frequencies up to 3 GHz)
- Insertion Loss: 1.0 dB max (frequencies up to 1.6 GHz)
- Rise Time for Impedance Measurement: 50 ps
- Within Pair Skew: 5 ps

Amphenol’s Mini-SAS High Density Interconnect is the next generation SAS system, with 4x, 8x, and 16x cable-plugging options to provide faster data transmission and more bandwidth for end users. The Mini-SAS HD connector system has a 2-row, right-angle connector with 12 Gbps per channel. Each connector handles 4 lanes of data for up to 48 Gbps of total bandwidth. Ganged options are also available up to a 1x4 configuration for up to 192 Gbps of total bandwidth. This connector will mate with active copper and optical cable assemblies, as well as active pluggable modules for extended-length applications in data centers. Main applications for Mini-SAS HD include HBA Servers, storage devices, switches, and rack-mounted computers.

**Specification Highlights**

- The Mini-SAS HD interconnect system is comprised of a 36-position, 2-row press-fit connector, and a stamped and formed cage assembly as one unit complying with SFF-8644.

The XFP interconnect system is capable of a 10 Gbps data rate and is intended for external I/O connections. High speed serial interconnect applications include clusters, servers, and storage devices. Its single row cage configuration requires less space and is a lower cost alternative to parallel-optics VSR. XFP also requires less than one-third the power and physical space of an MSA interconnect with parallel interface. It has a single footprint for all links, and is hot-pluggable.

The ExpressPort™ XFP+ Connector is designed to extend performance to 14 Gbps. Several EMI shielding options such as an elastomeric gasket or mylar tape are also available.

The CFP2 and CFP4 (surface mount receptacle connector) are considered as a candidate of future generation of multi hundred Gbps system. Both are 0.6mm pitch with the CFP2 having 104 positions and the CFP4 having 56 positions. They are rated for 28 Gbps per channel with resonance dampening for improved signal integrity. Both the CFP2 and CFP4 have a plug connector on the mating interface that improves accuracy and aids in achieving high speed performance.

**Specification Highlights**

The CFP2 and CFP4 interconnect systems are comprised of insert molding assemblies for top side contacts and press-fit cage assemblies.
