[larger image](#)

CW D-Subminiature connectors meet the stringent specifications of MIL-DTL-83503. We offer four sizes of each of two D-Subminiature types...pin and socket versions, each mating to standard 9, 15, 25 and 37 conductive cable. Interchangeable with other D-Subminiature standards, all CW D-Subminiature connectors incorporate two basic series of patents assuring contact integrity.

The D-Subminiature Insulation Displacement Connector is a popular standard for connecting many types of electronic equipment - computer and peripherals, instruments, telecommunications and test equipment in both commercial and military applications.

Our D-Subminiature connectors with metal face are ideal for input/output applications and interconnecting electronic equipment. These connectors are designed to the applicable standards of MIL-DTL-24308.
