NB3N5573DTGEVB

NB3N5573DTGEVB Evaluation Board User's Manual

ON Semiconductor®

<http://onsemi.com>

Device Name: NB3N5573DTG (TSSOP-16)
Board Name: NB35573DTGEVB

EVAL BOARD USER'S MANUAL

Description

The NB3N5573 is a high precision, low phase noise clock generator that supports PCI Express and Ethernet requirements. The device takes a 25 MHz fundamental mode parallel resonant crystal and generates differential HCSL output at 25 MHz, 100 MHz, 125 MHz or 200 MHz clock frequencies.

See datasheet NB3N5573/D (www.onsemi.com). The NB3N5573DTGEVB Evaluation board is designed to provide a flexible and convenient platform to quickly program, evaluate and verify the performance and operation of the NB3N5573DTG TSSOP-16 (Package Case 948F) device under test: With the device removed, this NB3N5573DTGEVB Evaluation board is designed to accept a 16 Lead TSSOP Socket (M&M Specialties, Inc., 1-800-892-8760, www.mmspec.com, M&M #50-000-00809) to permit use as an insertion test fixture.

Board Features

- Crystal mount source, or input external clock source (SMA)
- A TSSOP-16 NB3N5573DTG device is solder mounted or the board may be adapted for insertion testing by adding a TSSOP-16 socket.
- Separate supply connectors for VDD (banana jack and Anvil Clip) and GND (banana jack)

TEST AND MEASUREMENT SET-UP AND PROCEDURE

Step 1: Equipment

1. Signal Generator: Agilent #33250A or HP8133 (or equivalent)
2. Tektronix TDS8000 Oscilloscope
3. Power Supply: Agilent #6624A or AG6626A DC (or equivalent)
4. Digital Voltmeter: Agilent 34410A or 34401 (or equivalent)
5. Matched Cables (> 20 GHz, SMA connectors): Storm or Semflex (or equivalent)

6. Time Transition Converter: Agilent 14534 250 ps (or equivalent)
7. Phase noise Analyzer: Agilent E5052B (or equivalent)

Step 2: Lab Set-Up Procedure

1. Test Supply Setup:

Board and Device Power Supply Connections are shown in Table 1. VDD (Banana Jack or Anvil Clip test point) and GND (Banana Jack) and may be connected by.

Table 1. POWER SUPPLY CONNECTIONS

Device	Board	Banana Jack	Anvil Clip Test Point	Comments
VDD	VDD	BJ1	J11	
GND	GND	BJ2	J7	DUTGND and SMA GND

SUPPLY (VDD = 3.3 V; GND = 0.0 V' VEE = 0.0 V)

Single supply operation may be accomplished by connecting VDD and GND. HCSL CLK, CLKb, CLK1, and

CLK1b outputs are directly connected to a LOW impedance (50 Ω) module, scope, or probe per Figure 6. Both lines in an HCSL pair must be terminated.

Figure 6. Typical Termination for Output Driver and Device Evaluation

2. Inputs: (see Appendix 1, Device Pin to Board Connection Information)

For a Single Ended input to X1/CLK operation, install a zero ohm jumper resistor at R14. Do not install R16. Do not drive X2. Use a LVCMOS Clock amplitude signal at 25 MHz which satisfies datasheet VIH and VIL to drive X1/CLK. Input tr/tf transition edges should be about 250 ps. Use a TTC (Time transition Converter) such as Agilent 14534 (250 ps) or equivalent, if needed to slow faster edges.

Termination of a signal generator may be accomplished by placing a 50 Ω resistor (to GND) at location C42. The mounted crystal does not need to be removed for Single Ended input operation.

For Crystal operation use a fundamental Parallel Resonant crystal (see Datasheet section on “Recommended Crystal Parameters”) of 25 MHz. The board is supplied with a thru-hole 25 MHz crystal installed, but alternatively has the tabs for a surface mount crystal. The Crystal mount is

located on the back (underside) of the board and is permanently connected to the device inputs by traces. Crystal load caps should be mounted from each crystal pin to GND (16 74– 20 pF) to fine tune frequency.

Device frequency is selected by LVTTL/LVCMOS level inputs SEL0 and SEL1 per datasheet Table 2. Jumpers J12 (SEL0), J13 (SEL1) may be set to either VDD (HI) or GND (LO), or floated open (HI) to program the output frequency of operation. Jumpers may be removed to drive SEL0/1b directly with spec VIH or VIL levels. Note SEL0/1 inputs will default to VDD when left floating open. High Impedance probes must be used to sense the

LVTTL/LVCMOS input signal levels. Load cap may be added to fine tune frequency such as 15 pF to GND on both crystal pins.

Output current reference pin, IREF (Pin9) has a precision 475 Ω resistor (R5) installed from the output pin to GND to set the output current.

Inputs OE1 and OE2 may be jumpered to VEE (GND) for a LOW level (DISABLED) using J15 (OE1) or J12 (OE2). If floated open (jumper removed), pin will default to a HIGH level (ENABLED). High Impedance probes must be used to sense the signal levels.

APPENDIX 1: DEVICE PIN TO BOARD CONNECTION INFORMATION (see current Datasheet)

Table 2. DEVICE PINS TO BOARD CONNECTION

Device Pin	Device Pin Name	Board Connection	I/O	Description
1	S0	SEL0	LVTTL/LVCMOS Input	Frequency select input 0. Internal pullup resistor to VDD. See datasheet Table 2
2	S1	SEL1	LVTTL/LVCMOS Input	Frequency select input 1. Internal pullup resistor to VDD. See datasheet Table 2
3	NC	PIN3	No Connect	No Connect
4	X1/CLK	X1/CLK	Crystal Interface	Oscillator Input from Crystal. Single ended 25 Mhz LVTTL/LVCMOS Clock Input.
5	X2	X2	Crystal Interface	Oscillator Output to drive Crystal
6	OE	OE	LVTTL/LVCMOS Input	Output Enable Input pin to control CLKx (tri-states CLKx when LOW, open pin defaults to HIGH)
7	GND	GND	Ground Supply	DUT and SMA GND Supply. All Supply pins must be connected for proper operation
8	NC	PIN3	No Connect	No Connect
9	IREF	(-)		(connects Pin 9 through 475 Ω to GND)
10	CLK1b	CLK1b	HCSL Output	HCSL Invert Output
11	CLK1	CLK1	HCSL Output	HCSL True Output
12	VDD	VDD	Positive Supply	Positive Supply pin. All Supply pins must be connected for proper operation.
13	GND	GND	Ground Supply	DUT and SMA GND Supply. All Supply pins must be connected for proper operation
14	CLK0b	CLK0b	HCSL Output	HCSL Invert Output
15	CLK0	CLK0	HCSL Output	HCSL True Output
16	GND	GND	Ground Supply	DUT and SMA GND Supply. All Supply pins must be connected for proper operation

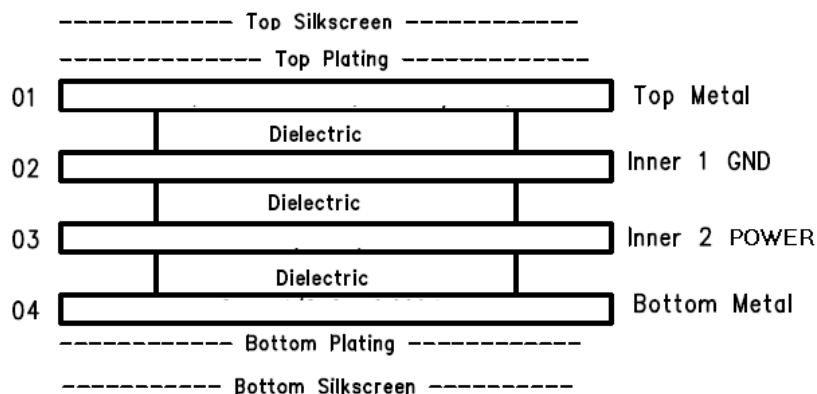

Figure 8. Lamination Stack

NB3N5573DTGEVB

1. Latest revisions shall apply to all specifications.
2. Fabricate PCB in accordance with IPC-A-600; using supplied CAD Data. Board data viewed from primary side (layer 1).
Board shall meet the requirements of UL796 with a flammability rating of 94V-0. Vendors UL logo or designation, date code, and UL rating shall be located in etch on the secondary side of the board. If space is limited, it is permissible to locate markings on secondary legend.
3. Materials: 180 TG FR4 or better, RoHS Compliant
Refer to layer stack-up for copper weight and dielectric thickness.
4. Impedance: Refer to layer stack-up.
5. Finish - .00005" of Hard Gold over .0002" Nickel
6. Soldermask: Color - Green, Type - LPI, Sides - Bottom ONLY.
7. Legend (silkscreen): No legend allowed on exposed lands.
Color - White, permanent, organic, non-conductive epoxy ink.
8. Electrical Test - 100% electrical test required and verified to IPC-356 netlist provided. Not applicable for double sided boards.
9. Warp and twist shall not exceed 10% (.010" per linear inch).
10. Tolerances:
Finished Plated through hole tolerance is $\pm .003$ ".
Non-plated through hole tolerance is $\pm .001$ ".
Board profile $\pm .010$ ".
11. Conductor widths shall be within $\pm .001$ of supplied artwork (except for impedance signals).
12. Remove all burrs and sharp edges $> .015$ ".

ON Semiconductor and the ON Semiconductor logo are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is as such not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and should as such only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

The board is delivered "AS IS" and without warranty of any kind including, but not limited to, that the board is production-worthy, that the functions contained in the board will meet your requirements, or that the operation of the board will be uninterrupted or error free. ON Semiconductor expressly disclaims all warranties, express, implied or otherwise, including without limitation, warranties of fitness for a particular purpose and non-infringement of intellectual property rights.

ON Semiconductor reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by ON Semiconductor shall not constitute any representation or warranty by ON Semiconductor, and no additional obligations or liabilities shall arise from ON Semiconductor having provided such information or services.

The boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. Should you purchase or use the board for any such unintended or unauthorized application, you shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by ON Semiconductor to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

ON Semiconductor does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: ON Semiconductor shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if ON Semiconductor is advised of the possibility of such damages. In no event shall ON Semiconductor's aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.
