BOTTOM OF PACKAGE VIEW

Exposed pad (Pin 28) has to be connected to COM for better electrical performance

Figure 1: Typical Application Connection

1. Bus capacitors should be mounted as close to the module bus terminals as possible to reduce ringing and EMI problems. Additional high frequency ceramic capacitor mounted close to the module pins will further improve performance.
2. Value of the boot-strap capacitors depends upon the switching frequency. Their selection should be made based on IR Design tip DT04-4 or application note AN-1044.
