

Cherry DVK

Availability: In Stock

The more you buy, the better the price you get

The Cherry DVK is a comprehensive development kit that is specifically designed to support the Cherry system-on-module (SOM), which are based on the Qualcomm IPQ5000 system-on-chip (SoC).This kit includes a rich set of interfaces including USB Type C socket (console + power), 2.5 Gbps ETH and1Gbps ETH interface in addition to UART and GPIO. The board also features a bootstrap switch, integrated antenna and Mini-PCIe connector (single lane, PCIe 2.0). The Cherry DVK provides developers with ample options for connecting and communicating with other devices and peripherals, making it a versatile and powerful tool for development and testing purposes.

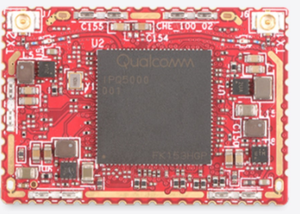

OpenWRT linux distribution source code is available on GitHub and is supported by our growing community on forum.

** Commercial temperature range: 0-65°C*
