CM1461

Praetorian® C-L-C LCD and Camera EMI Filter Array with ESD Protection

Product Description

The CM1461 is a family of pi-style EMI filter arrays with ESD protection, which integrates four, six and eight filters (C-L-C) in small form factor WDFN 0.50 mm pitch packages. Each EMI filter channel of the CM1461 is implemented as a 3-pole L-C filter where the component values are 10 pF – 20 nH – 10 pF. The CM1461's roll-off frequency at –6 dB attenuation is 400 MHz and can be used in applications where the data rates are as high as 140 Mbps while providing greater than 30 dB over the 800 MHz to 2.7 GHz frequency range.

The parts include ESD diodes on every pin, which provide a very high level of protection for sensitive electronic components that may be subjected to electrostatic discharge (ESD). The ESD protection diodes connected to the filter ports are designed and characterized to safely dissipate ESD strikes of ± 15 kV, beyond the maximum requirement of the IEC61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the pins are protected for contact discharges at greater than ± 30 kV.

This device is particularly well suited for wireless handsets, mobile LCD modules and PDAs because of its small package format and easy-to-use pin assignments. In particular, the CM1461 is ideal for EMI filtering and protecting data and control lines for the LCD display and camera interface in mobile handsets.

The CM1461 is housed in space saving, low profile 8, 12 and 16-lead WDFN packages where the pitch is 0.50 mm in lead-free format.

2. ESD applied to input and output pins with respect to GND, one at a time.

3. Clamping voltage is measured at the opposite side of the EMI filter to the ESD pin (i.e. if ESD is applied to pin A1 then clamping voltage is measured at pin C1). Unused pins are left open.
