## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## 1. Overview

### 1.1 Features

The R8C/2A Group and R8C/2B Group of single-chip MCUs incorporates the R8C/Tiny Series CPU core, employing sophisticated instructions for a high level of efficiency. With 1 Mbyte of address space, and it is capable of executing instructions at high speed. In addition, the CPU core boasts a multiplier for high-speed operation processing.

Power consumption is low, and the supported operating modes allow additional power control. These MCUs also use an anti-noise configuration to reduce emissions of electromagnetic noise and are designed to withstand EMI.

Integration of many peripheral functions, including multifunction timer and serial interface, reduces the number of system components.

Furthermore, the R8C/2B Group has on-chip data flash (1 KB  $\times$  2 blocks).

The difference between the R8C/2A Group and R8C/2B Group is only the presence or absence of data flash. Their peripheral functions are the same.

#### 1.1.1 Applications

Electronic household appliances, office equipment, audio equipment, consumer equipment, etc.

### 1.1.2 Specifications

Tables 1.1 and 1.2 outlines the Specifications for R8C/2A Group and Tables 1.3 and 1.4 outlines the Specifications for R8C/2B Group.

**Table 1.1 Specifications for R8C/2A Group (1)**

| Item                           | Function                  | Specification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU Registers. The CPU contains 13 registers. R0, R1, R2, R3, A0, A1, and FB configure a register bank. There are two sets of register bank.

Figure 2.1 CPU Registers

## 2.1 Data Registers (R0, R1, R2, and R3)

R0 is a 16-bit register for transfer, arithmetic, and logic operations. The same applies to R1 to R3. R0 can be split into high-order bits (R0H) and low-order bits (R0L) to be used separately as 8-bit data registers. R1H and R1L are analogous to R0H and R0L. R2 can be combined with R0 and used as a 32-bit data register (R2R0). R3R1 is analogous to R2R0.

## 2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. It is also used for transfer, arithmetic, and logic operations. A1 is analogous to A0. A1 can be combined with A0 and as a 32-bit address register (A1A0).

## 2.3 Frame Base Register (FB)

FB is a 16-bit register for FB relative addressing.

## 2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register that indicates the start address of an interrupt vector table.

## 2.5 Program Counter (PC)

PC is 20 bits wide and indicates the address of the next instruction to be executed.

## 2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointers (SP), USP, and ISP, are each 16 bits wide. The U flag of FLG is used to switch between USP and ISP.

## 2.7 Static Base Register (SB)

SB is a 16-bit register for SB relative addressing.

## 2.8 Flag Register (FLG)

FLG is an 11-bit register indicating the CPU state.

### 2.8.1 Carry Flag (C)

The C flag retains carry, borrow, or shift-out bits that have been generated by the arithmetic and logic unit.

### 2.8.2 Debug Flag (D)

The D flag is for debugging only. Set it to 0.

### 2.8.3 Zero Flag (Z)

The Z flag is set to 1 when an arithmetic operation results in 0; otherwise to 0.

### 2.8.4 Sign Flag (S)

The S flag is set to 1 when an arithmetic operation results in a negative value; otherwise to 0.

### 2.8.5 Register Bank Select Flag (B)

Register bank 0 is selected when the B flag is 0. Register bank 1 is selected when this flag is set to 1.

### 2.8.6 Overflow Flag (O)

The O flag is set to 1 when an operation results in an overflow; otherwise to 0.

### 2.8.7 Interrupt Enable Flag (I)

The I flag enables maskable interrupts.

Interrupt are disabled when the I flag is set to 0, and are enabled when the I flag is set to 1. The I flag is set to 0 when an interrupt request is acknowledged.

### 2.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to 0; USP is selected when the U flag is set to 1.

The U flag is set to 0 when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL is 3 bits wide and assigns processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has higher priority than IPL, the interrupt is enabled.

### 2.8.10 Reserved Bit

If necessary, set to 0. When read, the content is undefined.

### 3. Memory

#### 3.1 R8C/2A Group

Figure 3.1 is a Memory Map of R8C/2A Group. The R8C/2A group has 1 Mbyte of address space from addresses 00000h to FFFFFh.

The internal ROM is allocated lower addresses, beginning with address 0FFFFh. For example, a 48-Kbyte internal ROM area is allocated addresses 04000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal RAM is allocated higher addresses, beginning with address 00400h. For example, a 2.5-Kbyte internal RAM area is allocated addresses 00400h to 00DFFh. The internal RAM is used not only for storing data but also for calling subroutines and as stacks when interrupt requests are acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated here. All addresses within the SFR, which have nothing allocated are reserved for future use and cannot be accessed by users.

Figure 3.1 Memory Map of R8C/2A Group

### 3.2 R8C/2B Group

Figure 3.2 is a Memory Map of R8C/2B Group. The R8C/2B group has 1 Mbyte of address space from addresses 00000h to FFFFFh.

The internal ROM (program ROM) is allocated lower addresses, beginning with address 0FFFFh. For example, a 48-Kbyte internal ROM area is allocated addresses 04000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal ROM (data flash) is allocated addresses 02400h to 02BFFh.

The internal RAM area is allocated higher addresses, beginning with address 00400h. For example, a 2.5-Kbyte internal RAM is allocated addresses 00400h to 00DFFh. The internal RAM is used not only for storing data but also for calling subroutines and as stacks when interrupt requests are acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated here. All addresses within the SFR, which have nothing allocated are reserved for future use and cannot be accessed by users.

**Figure 3.2 Memory Map of R8C/2B Group**

## 4. Special Function Registers (SFRs)

An SFR (special function register) is a control register for a peripheral function. Tables 4.1 to 4.12 list the special function registers.

**Table 4.1 SFR Information (1)(1)**

| Address | Register                                                  | Symbol | After reset                                          |
|---------|-----------------------------------------------------------|--------|------------------------------------------------------|
| 0000h   |                                                           |        |                                                      |
| 0001h   |                                                           |        |                                                      |
| 0002h   |                                                           |        |                                                      |
| 0003h   |                                                           |        |                                                      |

**NOTES:**

1. The blank regions are reserved. Do not access locations in these regions.
2. Software reset, watchdog timer reset, voltage monitor 1 reset, or voltage monitor 2 reset do not affect this register.
3. The LVD0ON bit in the OFS register is set to 1 and hardware reset.
4. Power-on reset, voltage monitor 0 reset, or the LVD0ON bit in the OFS register is set to 0 and hardware reset.
5. Software reset, watchdog timer reset, voltage monitor 1 reset, or voltage monitor 2 reset do not affect b2 and b3.
6. The CSPROINI bit in the OFS register is set to 0.

## NOTES:

1. The blank regions are reserved. Do not access locations in these regions.
2. The OFS register cannot be changed by a program. Use a flash programmer to write to it.

## 5. Electrical Characteristics

The electrical characteristics of N version ( $T_{opr} = -20^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ ) and D version ( $T_{opr} = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ ) are listed below.

Please contact Renesas Technology sales offices for the electrical characteristics in the Y version ( $T_{opr} = -20^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ ).

**Table 5.1 Absolute Maximum Ratings**

| Symbol           | Parameter                     | Condition                      | Rated Value                                      | Unit               |
|------------------|-------------------------------|--------------------------------|--------------------------------------------------|--------------------|
| $V_{CC}/AV_{CC}$ | Supply voltage                |                                | -0.3 to 6.5                                      | V                  |
| $V_I$            | Input voltage                 |                                | -0.3 to $V_{CC} + 0.3$                           | V                  |
| $V_O$            | Output voltage                |                                | -0.3 to $V_{CC} + 0.3$                           | V                  |
| $P_d$            | Power dissipation             | $T_{opr} = 25^{\circ}\text{C}$ | 700                                              | mW                 |
| $T_{opr}$        | Operating ambient temperature |                                | -20 to 85 (N version) /<br>-40 to 85 (D version) | $^{\circ}\text{C}$ |
| $T_{stg}$        | Storage temperature           |                                | -65 to 150                                       | $^{\circ}\text{C}$ |

**Table 5.2 Recommended Operating Conditions**

| Symbol                            | Parameter                              |                                               | Conditions                                                                                   | Standard            |      |                     | Unit |

## NOTES:

1. V<sub>CC</sub> = 2.2 to 5.5 V at T<sub>opr</sub> = -20 to 85°C (N version) / -40 to 85°C (D version), unless otherwise specified.
2. The average output current indicates the average value of current measured during 100 ms.

|              |                                     | Without sample and hold | $V_{ref} = AV_{CC} = 2.2 \text{ to } 5.5 \text{ V}$             | 0.25     | —    | 5         | MHz           |
|              |                                     | With sample and hold    | $V_{ref} = AV_{CC} = 2.2 \text{ to } 5.5 \text{ V}$             | 1        | —    | 5         | MHz           |

## NOTES:

- $V_{CC}/AV_{CC} = V_{ref} = 2.2 \text{ to } 5.5 \text{ V}$  at  $T_{opr} = -20 \text{ to } 85^\circ\text{C}$  (N version) /  $-40 \text{ to } 85^\circ\text{C}$  (D version), unless otherwise specified.
- When the analog input voltage is over the reference voltage, the A/D conversion result will be 3FFh in 10-bit mode and FFh in 8-bit mode.

**Table 5.4 D/A Converter Characteristics<sup>(1)</sup>**

| Symbol     | Parameter                     |  | Conditions | Standard |      |      | Unit          |
|------------|-------------------------------|--|------------|----------|------|------|---------------|
|            |                               |  |            | Min.     | Typ. | Max. |               |
| —          | Resolution                    |  |            | —        | —    | 8    | Bit           |
| —          | Absolute accuracy             |  |            | —        | —    | 1.0  | %             |
| $t_{su}$   | Setup time                    |  |            | —        | —    | 3    | $\mu\text{s}$ |
| $R_o$      | Output resistor               |  |            | 4        | 10   | 20   | $k\Omega$     |
| $I_{vref}$ | Reference power input current |  | (NOTE 2)   | —        | —    | 1.5  | mA            |

## NOTES:

- $V_{CC}/AV_{CC} = V_{ref} = 2.7 \text{ to } 5.5 \text{ V}$  at  $T_{opr} = -20 \text{ to } 85^\circ\text{C}$  (N version) /  $-40 \text{ to } 85^\circ\text{C}$  (D version), unless otherwise specified.
- This applies when one D/A converter is used and the value of the DAi register ( $i = 0 \text{ or } 1$ ) for the unused D/A converter is 00h. The resistor ladder of the A/D converter is not included. Also, even if the VCUT bit in the ADCON1 register is set to 0 ( $V_{REF}$  not connected),  $I_{vref}$  flows into the D/A converters.

## NOTES:

1. V<sub>CC</sub> = 2.7 to 5.5 V at T<sub>opr</sub> = 0 to 60°C, unless otherwise specified.
2. Definition of programming/erasure endurance  
The programming and erasure endurance is defined on a per-block basis.  
If the programming and erasure endurance is n (n = 100 or 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one.  
However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
3. Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed).
4. In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. It is also advisable to retain data on the erase count of each block and limit the number of erase operations to a certain number.
5. If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
6. Customers desiring program/erase failure rate information should contact their Renesas technical support representative.
7. The data hold time includes time that the power supply is off or the clock is not supplied.

## NOTES:

1. V<sub>CC</sub> = 2.7 to 5.5 V at T<sub>opr</sub> = -20 to 85°C (N version) / -40 to 85°C (D version), unless otherwise specified.
2. Definition of programming/erasure endurance  
The programming and erasure endurance is defined on a per-block basis.  
If the programming and erasure endurance is n (n = 100 or 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one.  
However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
3. Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed).
4. Standard of block A and block B when program and erase endurance exceeds 1,000 times. Byte program time to 1,000 times is the same as that in program ROM.
5. In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. It is also advisable to retain data on the erase count of each block and limit the number of erase operations to a certain number.
6. If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
7. Customers desiring program/erase failure rate information should contact their Renesas technical support representative.
8. -40°C for D version.
9. The data hold time includes time that the power supply is off or the clock is not supplied.

## NOTES:

1. The measurement condition is Vcc = 2.2 V to 5.5 V and Topr = -20 to 85°C (N version) / -40 to 85°C (D version).
2. Time until the voltage monitor 2 interrupt request is generated after the voltage passes Vdet2.
3. Necessary time until the voltage detection circuit operates after setting to 1 again after setting the VCA27 bit in the VCA2 register to 0.

**Table 5.10 Power-on Reset Circuit, Voltage Monitor 0 Reset Electrical Characteristics<sup>(3)</sup>**

| Symbol            | Parameter                                                   | Condition | Standard |      |                   | Unit    |
|-------------------|-------------------------------------------------------------|-----------|----------|------|-------------------|---------|
|                   |                                                             |           | Min.     | Typ. | Max.              |         |
| V <sub>por1</sub> | Power-on reset valid voltage <sup>(4)</sup>                 |           | –        | –    | 0.1               | V       |
| V <sub>por2</sub> | Power-on reset or voltage monitor 0 reset valid voltage     |           | 0        | –    | V <sub>det0</sub> | V       |
| tr <sub>th</sub>  | External power V <sub>CC</sub> rise gradient <sup>(2)</sup> |           | 20       | –    | –                 | mV/msec |

**NOTES:**

1. The measurement condition is T<sub>opr</sub> = -20 to 85°C (N version) / -40 to 85°C (D version), unless otherwise specified.
2. This condition (external power V<sub>CC</sub> rise gradient) does not apply if V<sub>CC</sub> ≥ 1.0 V.
3. To use the power-on reset function, enable voltage monitor 0 reset by setting the LVD0ON bit in the OFS register to 0, the VW0C0 and VW0C6 bits in the VW0C register to 1 respectively, and the VCA25 bit in the VCA2 register to 1.
4. t<sub>w(por1)</sub> indicates the duration the external power V<sub>CC</sub> must be held below the effective voltage (V<sub>por1</sub>) to enable a power on reset. When turning on the power for the first time, maintain t<sub>w(por1)</sub> for 30 s or more if -20°C ≤ T<sub>opr</sub> ≤ 85°C, maintain t<sub>w(por1)</sub> for 3,000 s or more if -40°C ≤ T<sub>opr</sub> < -20°C.

| –       | Oscillation stability time                                                                                       | $V_{CC} = 5.0 \text{ V}$ , $T_{opr} = 25^{\circ}\text{C}$                                                      | –        | 10     | 100  | $\mu\text{s}$ |
| –       | Self power consumption at oscillation                                                                            | $V_{CC} = 5.0 \text{ V}$ , $T_{opr} = 25^{\circ}\text{C}$                                                      | –        | 550    | –    | $\mu\text{A}$ |

## NOTES:

1.  $V_{CC} = 2.2 \text{ to } 5.5 \text{ V}$ ,  $T_{opr} = -20 \text{ to } 85^{\circ}\text{C}$  (N version) /  $-40 \text{ to } 85^{\circ}\text{C}$  (D version), unless otherwise specified.
2. These standard values show when the FRA1 register value after reset is assumed.
3. These standard values show when the correction value in the FRA6 register is written to the FRA1 register.

| –      | Self power consumption at oscillation  | $V_{CC} = 5.0 \text{ V}$ , $T_{opr} = 25^{\circ}\text{C}$ | –        | 15   | –    | $\mu\text{A}$ |

## NOTE:

1.  $V_{CC} = 2.2 \text{ to } 5.5 \text{ V}$ ,  $T_{opr} = -20 \text{ to } 85^{\circ}\text{C}$  (N version) /  $-40 \text{ to } 85^{\circ}\text{C}$  (D version), unless otherwise specified.

**Table 5.13 Power Supply Circuit Timing Characteristics**

| Symbol               | Parameter                                                                   | Condition | Standard |      |      | Unit          |
|----------------------|-----------------------------------------------------------------------------|-----------|----------|------|------|---------------|
|                      |                                                                             |           | Min.     | Typ. | Max. |               |
| t <sub>d</sub> (P-R) | Time for internal power supply stabilization during power-on <sup>(2)</sup> |           | 1        | –    | 2000 | $\mu\text{s}$ |
| t <sub>d</sub> (R-S) | STOP exit time <sup>(3)</sup>                                               |           | –        | –    | 150  | $\mu\text{s}$ |

## NOTES:

1. The measurement condition is  $V_{CC} = 2.2 \text{ to } 5.5 \text{ V}$  and  $T_{opr} = 25^{\circ}\text{C}$ .
2. Waiting time until the internal power supply generation circuit stabilizes during power-on.
3. Time until system clock supply starts after the interrupt is acknowledged to exit stop mode.

**NOTES:**

1. When using timer RF input capture mode, adjust the cycle time to  $(1/\text{timer RF count source frequency} \times 3)$  or above.
2. When using timer RF input capture mode, adjust the pulse width to  $(1/\text{timer RF count source frequency} \times 1.5)$  or above.

| $t_{w(INL)}$ | $\overline{INT0}$ input "L" width | 250 <sup>(2)</sup> | —    | ns   |

**NOTES:**

1. When selecting the digital filter by the  $\overline{INTi}$  input filter select bit, use an  $\overline{INTi}$  input HIGH width of either (1/digital filter clock frequency  $\times$  3) or the minimum value of standard, whichever is greater.
2. When selecting the digital filter by the  $\overline{INTi}$  input filter select bit, use an  $\overline{INTi}$  input LOW width of either (1/digital filter clock frequency  $\times$  3) or the minimum value of standard, whichever is greater.

**NOTES:**

1. When using timer RF input capture mode, adjust the cycle time to  $(1/\text{timer RF count source frequency} \times 3)$  or above.
2. When using timer RF input capture mode, adjust the pulse width to  $(1/\text{timer RF count source frequency} \times 1.5)$  or above.

## NOTES:

1. When selecting the digital filter by the  $\overline{INTi}$  input filter select bit, use an  $\overline{INTi}$  input HIGH width of either (1/digital filter clock frequency  $\times$  3) or the minimum value of standard, whichever is greater.
2. When selecting the digital filter by the  $\overline{INTi}$  input filter select bit, use an  $\overline{INTi}$  input LOW width of either (1/digital filter clock frequency  $\times$  3) or the minimum value of standard, whichever is greater.

**Figure 5.22 External Interrupt  $\overline{INTi}$  Input Timing Diagram when Vcc = 2.2 V**

## Package Dimensions

Diagrams showing the latest package dimensions and mounting information are available in the “Packages” section of the Renesas Technology website.

Notes:

1. This document is provided for reference purposes only so that Renesas customers may select the appropriate Renesas products for their use. Renesas neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants any license to any intellectual property rights or any other rights of Renesas or any third party with respect to the information in this document.
2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.
3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.
4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (<http://www.renesas.com>)
5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.
6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guarantees regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.
7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.
8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
  - (1) artificial life support devices or systems
  - (2) surgical implantations
  - (3) healthcare intervention (e.g., excision, administration of medication, etc.)
  - (4) any other purposes that pose a direct threat to human lifeRenesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.
9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.
10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.
12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.
13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.
