INTRODUCTION

Is your NVIDIA Jetson Nano too hot and overheating? Don't worry, here comes the cooling solution! This cooling case, with a reset switch and a blue backlit power button, is an efficient thermal solution customized for Jetson Nano. It includes two fans, one is pre-installed inside the case, the other is a PWM controllable fan for cooling CPU.

The case comes with two antenna holes and a camera holder for installing antenna and official Raspberry camera.

Downloaded from Arrow.com.

Honeycomb vents of the case reduce the heat generated by your device while it is performing neural network training or running machine vision programs. There are four anti-skid rubber pads on the bottom of the case to prevent skidding.
We provide you with anti-static tweezers and screwdriver to help you to install easily; besides, we offer you three jumper caps to ensure the normal operation of reset and restart functions.

Note:
1. Raspberry Camera and antenna are not included.
2. This case is suitable for Jetson Nano A02, please check the version of your Jetson Nano before ordering.
