Description

RePhone Kit Create is an open source modular phone kit that changes the way we put our phone into use. It provides a new form of phone customization, and the easiest solution to wearable/IoT development. With Rephone you can create your own phone in minutes, by using the slim MODULES, accessible SOFTWARE, and customizable Phone Enclosures, and also hack things around you, giving inanimate objects the power of cellular communication, having conversations with your pets, plants, toys, motorcycle helmets, robots, or drones through cellular connectivity. 'Re' means 'Renaissance'. A phone does not necessary to be a bulky rectangular block that can only be used by human, it ought to have different shapes and sizes for different applications. The Renaissance of Phone encourages people to 'rethink' what a phone could be, 'redesign' how it should look like, and 'remix' the modules to 'remake' a unique phone for our very own. Now it is time for us to start the Renaissance of Phone.

Features

- World's first open source and modular phone
- Kraft paper with versatility and durability
- Various rich-featured add-on modules for function extension
- DIY Phone

Pebble GSM

The new Pebble Time and Pebble Time Steel offers the smartstrap extension. This feature could really help transform the Pebble into a really smart standalone smartwatch. For this, we need to attach GSM functions to the watch by building a smartstrap.T
