MATERIALS

- 1. INSULATION SLEEVE: Heat-shrinkable, transparent blue, radiation cross-linked modified polyvinylidene fluoride.
- 2. SOLDER PREFORM WITH FLUX:

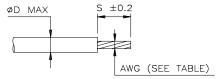

SOLDER: TYPE Sn63 per ANSI-J-STD-006. FLUX: TYPE ROL1 per ANSI-J-STD-004.

3. PIN: Cu/Sn-Pb/5b per ASTM B-579-73.

APPLICATION

- 1. These controlled soldering devices are designed for use in attaching a stranded wire, having tin or silver plated conductors, insulations rated for at least 125°C and meeting the dimensional criteria listed, to a printed circuit board having plated-thru holes with a diameter 0.3 to 0.6 larger than the lead diameter (A).
- 2. To install part, strip wire (S). Position sleeve so that the solder preform is over conductor and the pre-installed lead does not overlap wire insulation. Heat, using a suitable heat source and reflector until the solder preform melts and flows to form a fillet between the two wires.
- 3. When installed as above, assembly will meet requirements of Raychem Specification RT-1404 for splices.

For best results, prepare the wire as shown:
