1. Introduction

1.1 Product Overview

AzureWave Technologies, Inc. introduces the advanced **IEEE 802.11 ac/a/b/g/n 2x2 MIMO WLAN and Bluetooth M.2 combo** module - **AW-CM235NF**. The module is targeted to mobile and embedded devices which need small footprint package, low power consumption, and multiple OS support. The module supports **2.4GHz and 5GHz bands** IEEE 802.11ac MAC/baseband/radio and Bluetooth 5.0 + EDR. It also features an integrated Power Management Unit (PMU), Power Amplifiers (PAs), and a Low Noise Amplifier (LNA) to address the needs of mobile devices that require minimal power consumption and compact size. By using AW-CM235NF, the customers can easily enable the Wi-Fi and BT embedded applications with the benefits of **high design flexibility, short development cycle, and quick time-to-market**.

For the WLAN operation, the AW-CM235NF uses DSSS, OFDM, DBPSK, DQPSK, CCK and QAM baseband modulation technologies. In IEEE 802.11ac mode, the WLAN operation supports rates of MCS0–MCS9 (up to 256 QAM) in **20 MHz, 40 MHz, and 80 MHz channels** for data rates up to 867 Mbps. A high level of integration and full implementation of the power management functions specified in the IEEE 802.11 standard minimize the system power requirements by using AW-CM235NF. In addition to the support of **WPA/WPA2 (personal)** and **WEP** encryption, the AW-CM235NF also supports the IEEE 802.11i security standard through **AES** and **TKIP** acceleration hardware for faster data encryption. For the video, voice and multimedia applications the AW-CM235NF support 802.11e Quality of Service (QoS).

For Bluetooth operation, the AW-CM235NF is **Bluetooth 5.0**. The Bluetooth transmitter also features a Class 1 power amplifier with Class 2 capability. The AW-CM235NF supports **extended Synchronous Connections (eSCO)**, for enhanced voice quality by allowing for retransmission of dropped packets, and **Adaptive Frequency Hopping (AFH)** for reducing radio frequency interference. It incorporates all Bluetooth 5.0 features.

1.2 Features

- Integrates CYPRESS solutions of CYW4354 Wi-Fi /BT Single Chip
- Concurrent Bluetooth and WLAN operation
- ECI—enhanced coexistence support, ability to coordinate BT SCO transmissions around WLAN receives
- Multiple power saving modes for low power consumption
- Lead-free /Halogen Free Design
- 12 mm(L) x 16mm(W) x 1.5mm(H) 132 pin LGA package

1.2.1 WLAN

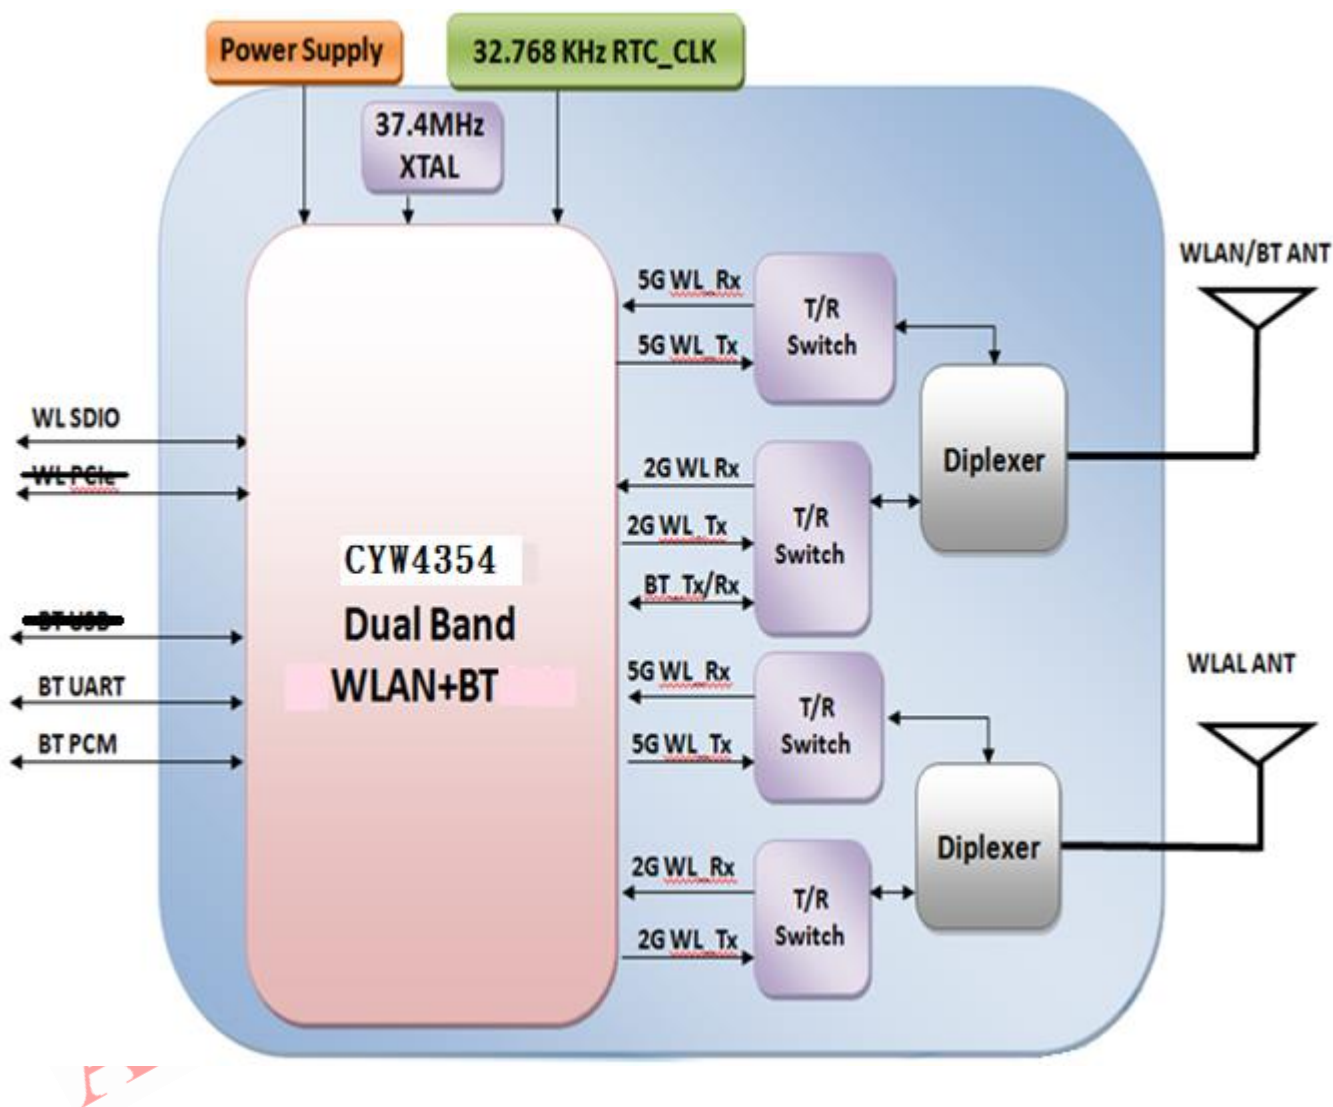

- IEEE 802.11ac Draft compliant
- Full IEEE 802.11a/b/g/n legacy compatibility with enhanced performance
- IEEE 802.11a/b/g/n/ac dual-band radio with virtual-simultaneous dual-band operation
- IEEE 802.11ac 2x2 MIMO supports for 20, 40, and 80 MHz channels with optional SGI (256 QAM modulation) provides data rates up to 866.7 Mbps.
- Tx and Rx low-density parity check (LDPC) support for improved range and power efficiency.
- Supports IEEE 802.15.2 external coexistence interface to optimize bandwidth utilization with other co-located wireless technologies such as LTE, GPS, or WiMAX
- Supports IEEE 802.11d, e, h, i, r, k, w
- WLAN host interface options
 - SDIO
- Security—WEP, WPA/WPA2 (personal), AES (HW), TKIP (HW), CKIP (SW).
- WMM/WMM-PS/WMM-SA
- Proprietary protocol —CCXv2/CCXv3/CCXv4/CCXv5
- Integrated CPU with on-chip memory for a complete WLAN subsystem minimizing the need to wake up the applications processor

1.2.2 Bluetooth

- **Bluetooth Class 1 or Class 2 transmitter operation**
- **Supports key features of upcoming Bluetooth standards**
- **Fully supports Bluetooth Core Specification version 5.0 + (Enhanced Data Rate) EDR features:**
 - **Adaptive Frequency Hopping (AFH)**
 - **Quality of Service (QoS)**
 - **Extended Synchronous Connections (eSCO) — Voice Connections**
 - **Fast Connect (interlaced page and inquiry scans)**
 - **Secure Simple Pairing (SSP)**
 - **Sniff Subrating (SSR)**
 - **Encryption Pause Resume (EPR)**
 - **Extended Inquiry Response (EIR)**
 - **Link Supervision Timeout (LST)**
- **Multipoint operation with up to seven active slaves**
 - **Maximum of seven simultaneous active ACL links**
 - **Maximum of three simultaneous active SCO and eSCO connections with scatternet support**
- **Full support for power savings modes**
 - **Bluetooth clock request**
 - **Bluetooth standard sniff**
 - **Deep-sleep modes and software regulator shutdown**
- **Wideband speech support (16 bits linear data, MSB first, left justified at 4K samples/s for transparent air coding, both through I2S and PCM interface)**
- **Multiple simultaneous A2DP audio stream**

1.3 Block Diagram

A simplified block diagram of the AW-CM235NF module is depicted in the figure below.

1.4 Specifications Table

1.4.1 General

Features	Description
Product Description	IEEE 802.11 a/b/g/n/ac Wireless LAN and Bluetooth M.2 Combo Module
Major Chipset	CYPRESS CYW4354
Host Interface	WLAN: SDIO V 3.0 Bluetooth: UART
Dimension	16mm(L) 12xmm(W) x 1.5mm(H)
Package	M.2 1216 Solder down
Antenna	I-PEX MHF4 Connector Receptacle (20449) Ant 1: WiFi/BT Main Ant 2: WIFI AUX
Weight	0.6g

1.4.2 WLAN

Features	Description
WLAN Standard	IEEE 802.11a/b/g/n/ac, Wi-Fi compliant
WLAN VID/PID	n/a
WLAN SVID/SPID	n/a
Frequency Range	WLAN: 2.4 GHz / 5GHz Band
Modulation	DSSS DBPSK(1Mbps), DQPSK(2Mbps), CCK(11/5.5Mbps) OFDM BPSK(9/6Mbps/MCS0), QPSK(18/12Mbps/MCS1~2), 16-QAM(36/24Mbps/MCS3~4), 64-QAM(72.2/54/48Mbps/MCS5~7), 256-QAM(MCS8~9)
Number of Channels	802.11b: USA, Canada and Taiwan – 1 ~ 11 Most European Countries – 1 ~ 13 Japan – 1 ~ 13 802.11g: USA and Canada – 1 ~ 11 Most European Countries – 1 ~ 13 802.11n:

3.4 Power up Timing Sequence

3.4.1 Sequencing of Reset and Regulator Control Signals

The AW-CM235NF has three signals that allow the host to control power consumption by enabling or disabling the Bluetooth, WLAN, and internal regulator blocks. These signals are described below. Additionally, diagrams are provided to indicate proper sequencing of the signals for various operational states. The timing values indicated are minimum required values; longer delays are also acceptable.

Note:

- For both the WL_REG_ON and BT_REG_ON pins, there should be at least a 10 ms time delay between consecutive toggles (where both signals have been driven low). This is to allow time for the CBUCK regulator to discharge. If this delay is not followed, then there may be a VDDIO in-rush current on the order of 36 mA during the next PMU cold start.
- VBAT should not rise 10%–90% faster than 40 microseconds. VBAT should be up before or at the same time as VDDIO. VDDIO should NOT be present first or be held high before VBAT is high.

3.4.2 Description of Control Signals

The AW-CM235NF has two signals that enable or disable the Bluetooth and WLAN circuits and the internal regulator blocks, allowing the host to control power consumption.

PIN No.	Name	Description	Type
45	WL_REG_ON	Used by PMU to power up or power down the internal AW-CM235NF regulators used by the WLAN section. Also, when deasserted, this pin holds the WLAN section in reset. This pin has an internal 200 kΩ pull-down resistor that is enabled by default. It can be disabled through programming.	I
63	BT_REG_ON	Used by PMU to power up or power down the internal AW-CM235NF regulators used by the Bluetooth section. Also, when deasserted, this pin holds the Bluetooth section in reset. This pin has an internal 200 kΩ pull-down resistor that is enabled by default. It can be disabled through programming.	I

Power-Up/Power-Down/Reset Control Signals

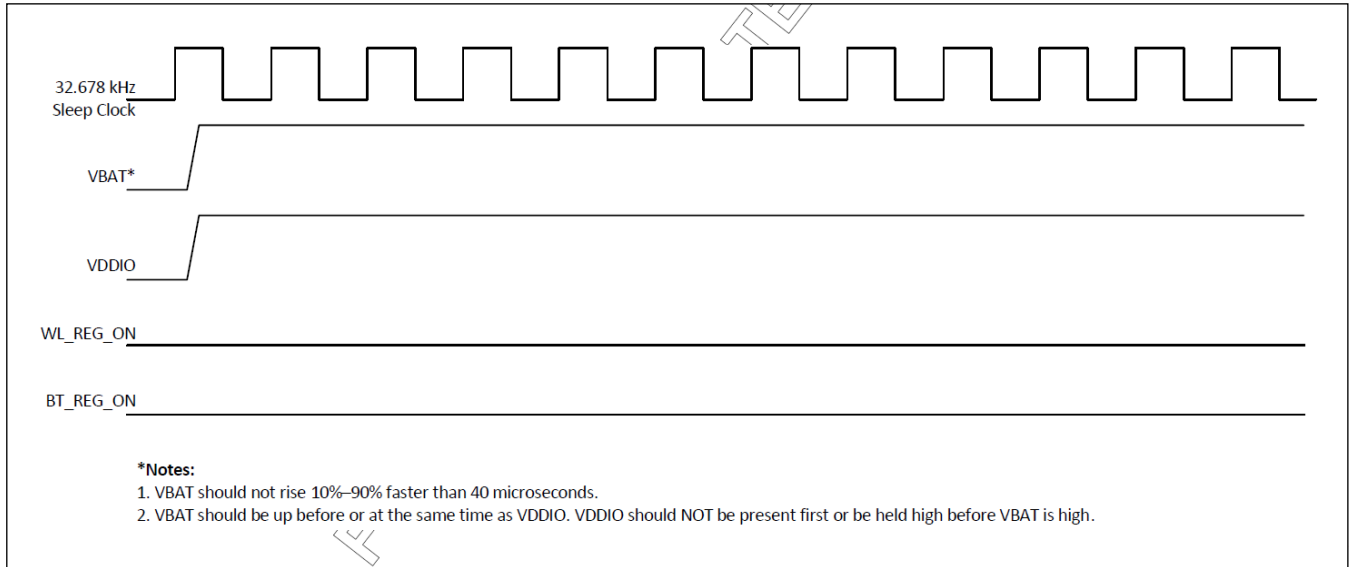

Signal	Description
WL_REG_ON	This signal is used by the PMU (with BT_REG_ON) to power up the WLAN section. It is also ORgated with the BT_REG_ON input to control the internal AW-CM235NF regulators. When this pin is high, the regulators are enabled and the WLAN section is out of reset. When this pin is low, the WLAN section is in reset. If BT_REG_ON and WL_REG_ON are both low, the regulators are disabled. This pin has an internal 200 kΩ pull-down resistor that is enabled by default. It can be disabled through programming.
BT_REG_ON	This signal is used by the PMU (with WL_REG_ON) to decide whether or not to power down the internal AW-CM235NF regulators. If both BT_REG_ON and WL_REG_ON are low, the regulators will be disabled. When this pin is low and WL_REG_ON is high, the BT section is in reset. This pin has an internal 200 kΩ pull-down resistor that is enabled by default. It can be disabled through programming.

3.5.2 Bluetooth

No.	Mode	Packet Type	VBAT_IN=3.3 V	
			Max.	Avg.
1	Sleep	n/a		5.29 uA
2	Page scan	n/a	10.9mA	158.2uA

3	Transmit ^{*(4)}	DH5	23.5 mA	22.6 mA
4	Receive	3-DH5	15.6 mA	15.3 mA

* The power consumption is based on Azurewave test environment, these data for reference only.
