1. Purpose and Scope

This document contains both general requirements, qualification requirements, and those specific electrical, mechanical requirements for this part.

2. Description

Ø9.5mm electro-magnetic sound generator, RoHS compliant.

3. Application

Computers and Peripherals, Portable Equipment, Automobile Electronics, etc.

4. Component Requirement

4.1 General Requirement

- | | | |
|---------------|-----------------------------|------------------|
| 4.1.1. | Operating Temperature Range | : -20°C to +60°C |
| 4.1.2. | Storage Temperature Range | : -30°C to +70°C |
| 4.1.3. | Housing Material | : Noryl SE1 |
| 4.1.4. | Weight | : Approx. 1g |

4.2 Electrical Requirement

- | | | |
|---------------|--|------------|
| 4.2.1. | Rated Voltage | : 3V |
| 4.2.2. | Operating Voltage | : 2 ~ 4 V |
| 4.2.3. | Rated Current
(Applying rated voltage and rated frequency) | : ≤80mA |
| 4.2.4. | Coil Resistance | : 25 ± 4 Ω |
| 4.2.5. | Sound Pressure Level at 10cm
(Applying rated voltage and rated frequency) | : ≥82dB |
| 4.2.6. | Rated Frequency | : 3200Hz |

Figure 1. Frequency Response

4.3 Mechanical Requirement

- | | | |
|---------------|----------------------|---------------------------|
| 4.3.1. | Layout and Dimension | : See Section 7, Figure 3 |
|---------------|----------------------|---------------------------|

4.4 Test Setup

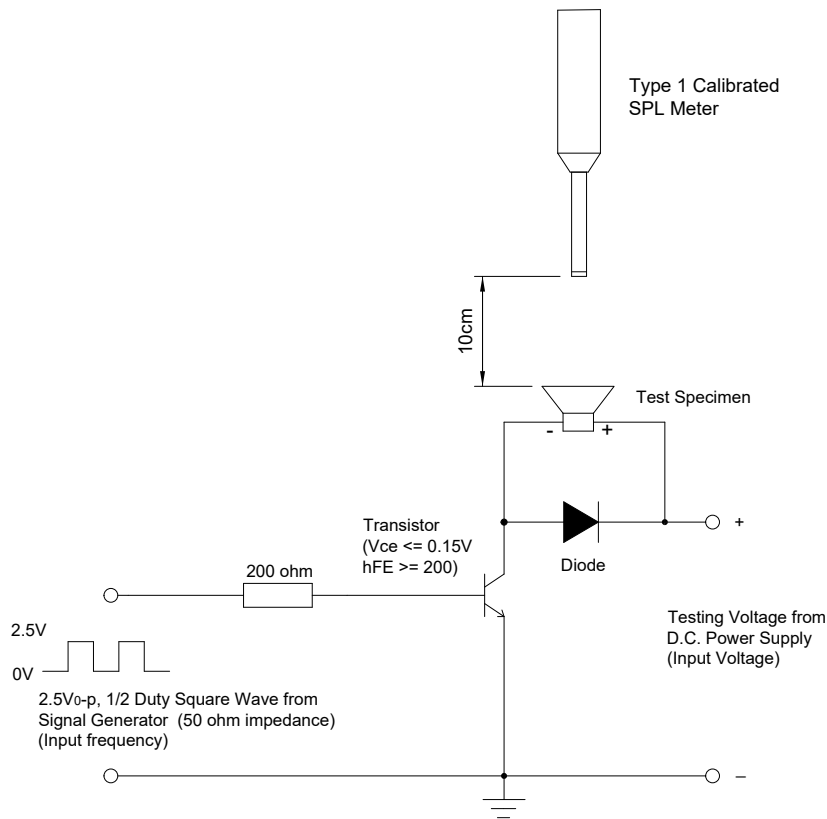

Figure 2. Test Setup

Notes : Apply 3V from DC power supply, set 3200Hz from Signal Generator. Measure SPL using a calibrated SPL meter 10cm from the alert port. Sound level meter to be in accordance with IEC651 (1979) Type 1 and/or ANSI S1.4-1983. The meter must be checked on a daily basis using a calibrated acoustic calibrator recommended by the manufacturer. Measurement should be carried out in a free field environment or at least 40cm from any surface.

5. Reliability Test

- 5.1. Operating Life** : Subject samples to room condition for 96 hours with rated power and resonance frequency. Components must be fully stabilized before data is taken, which may require up to a 2 hours soak.
- 5.2. High Temperature** : Subject samples to +60°C and operate for 96 hours with rated power and resonance frequency. Components must be fully stabilized at temperature extremes before data is taken, which may require up to a 2 hours soak.
- 5.3. Low Temperature** : Subject samples to -20°C and operate for 96 hours with rated power and resonance frequency. Components must be fully stabilized at temperature extremes before data is taken, which may require up to a 2 hours soak.
- 5.4. Temperature Cycle** : Each temperature cycle shall consist of 30 minutes at -20°C, 15 minutes at +20°C, 30 minutes at +60°C and 15 minutes at +20°C. Test duration is for 10 cycles. Components must be fully stabilized at temperature extremes before data is taken, which may require up to a 2 hours soak.
- 5.5. Static Humidity** : Precondition at room temperature for 1 hour. Then expose to +40°C with 90 to 95% relative humidity for 96 hours. Finally dru at room ambient for 2 hours before taking final measurement.
- 5.6. Random Vibration** : Secure samples. Vibrated randomly 10Hz ~ 50Hz ~ 10Hz with 1.52mm peak amplitude and 1 minute sweep duration. The test duration is 2 hours per plane.
- 5.7. Mechanical Shock** : Secure samples as required. Then subject samples to half sine wave pules (100m/s² for 16ms) for a total of 1000 ± 10 shocks.
- 5.8. Drop Test** : Drop samples with package naturally from the height of 1m onto a wooden board three times.

6. Mechanical Layout

Unit : mm

Tolerance : Linear XX.X = ± 0.3
 XX.XX = ± 0.05
 Angular = $\pm 0.25^\circ$

(unless otherwise specified)
