

Ordered 50 thinking I might get... not 50 of the same thing. Think again. 50 identical unpopulated boards. I was hoping to get something to look at - something to wonder how works. Don't waste your time.

[Edit] I knew it was a gamble, but I didn't expect to receive something so small! "Board varies in size and shape from 1x1" to 4x4"." ... and here I got the DIP to SOIC breakbout... which is not even 1x1", just way smaller... I tought you'd sort out that kind of very small things :(((

Sorry to hear about the issues with the ding and dent boards. Have you reached out to our support department @ techsupport@sparkfun.com? They can probably help fix this problem for you and get you setup with some different scrap boards.

In 2003, CU student Nate Seidle blew a power supply in his dorm room and, in lieu of a way to order easy replacements, decided to start his own company. Since then, SparkFun has been committed to sustainably helping our world achieve electronics literacy from our headquarters in Boulder, Colorado

No matter your vision, SparkFun's products and resources are designed to make the world of electronics more accessible. In addition to over 2,000 open source components and widgets, SparkFun offers curriculum, training and online tutorials designed to help demystify the wonderful world of embedded electronics. We're here to help you start something
