LM2930 3-Terminal Positive Regulator

Check for Samples: LM2930

FEATURES

- **Input-Output Differential Less Than 0.6V**
- **Output Current in Excess of 150 mA**
- **Reverse Battery Protection**
- **40V Load Dump Protection**
- **Internal Short Circuit Current Limit**
- **Internal Thermal Overload Protection**
- **Mirror-Image Insertion Protection**
- **P^+ Product Enhancement Tested**

VOLTAGE RANGE

- **LM2930T-5.0: 5V**
- **LM2930T-8.0: 8V**
- **LM2930S-5.0: 5V**
- **LM2930S-8.0: 8V**

DESCRIPTION

The LM2930 3-terminal positive regulator features an ability to source 150 mA of output current with an input-output differential of 0.6V or less. Efficient use of low input voltages obtained, for example, from an automotive battery during cold crank conditions, allows 5V circuitry to be properly powered with supply voltages as low as 5.6V. Familiar regulator features such as current limit and thermal overload protection are also provided.

Designed originally for automotive applications, the LM2930 and all regulated circuitry are protected from reverse battery installations or 2 battery jumps. During line transients, such as a load dump (40V) when the input voltage to the regulator can momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both internal circuits and the load. The LM2930 cannot be harmed by temporary mirror-image insertion.

Fixed outputs of 5V and 8V are available in the plastic TO-220 and SFM power packages.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings (1) (2)

Input Voltage	Operating Range	26V
	Overvoltage Protection	40V
	Reverse Voltage (100 ms)	−12V
	Reverse Voltage (DC)	−6V
Internal Power Dissipation (3)		Internally Limited
Operating Temperature Range		−40°C to +85°C
Maximum Junction Temperature		125°C
Storage Temperature Range		−65°C to +150°C
Lead Temp. (Soldering, 10 seconds)		230°C

(1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which ensure specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not ensured for parameters where no limit is given, however, the typical value is a good indication of device performance.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
(3) Thermal resistance without a heat sink for junction to case temperature is 3°C/W and for case to ambient temperature is 50°C/W for the TO-220, 73°C/W for the SFM. If the SFM package is used, the thermal resistance can be reduced by increasing the P.C. board copper area thermally connected to the package. Using 0.5 square inches of copper area, θ_{JA} is 50°C/W; with 1 square inch of copper area, θ_{JA} is 37°C/W; and with 1.6 or more square inches of copper area, θ_{JA} is 32°C/W.

Electrical Characteristics (1)

LM2930-5.0 V_{IN}=14V, I_O=150 mA, T_j=25°C (2), C2=10 µF, unless otherwise specified

Parameter	Conditions	Typ	Tested Limit (3)	Design Limit (4)	Unit
Output Voltage		5	5.3		V_{MAX}
			4.7		V_{MIN}
	6V≤V_{IN}≤26V, 5 mA≤I_O≤150 mA −40°C≤T_J≤125°C			5.5	V_{MAX}
				4.5	V_{MIN}
Line Regulation	9V≤V_{IN}≤16V, I_O=5 mA	7	25		mV_{MAX}
	6V≤V_{IN}≤26V, I_O=5 mA	30	80		mV_{MAX}
Load Regulation	5 mA≤I_O≤150 mA	14	50		mV_{MAX}
Output Impedance	100 mA_{DC} & 10 mA_{rms}, 100 Hz−10 kHz	200			mΩ
Quiescent Current	I_O=10 mA	4	7		mA_{MAX}
	I_O=150 mA	18	40		mA_{MAX}
Output Noise Voltage	10 Hz−100 kHz	140			$µV_{rms}$
Long Term Stability		20			mV/1000 hr
Ripple Rejection	f_O=120 Hz	56			dB
Current Limit		400	700		mA_{MAX}
			150		mA_{MIN}
Dropout Voltage	I_O=150 mA	0.32	0.6		V_{MAX}
Output Voltage Under	−12V≤V_{IN}≤40V, R_L=100Ω		5.5		V_{MAX}
Transient Conditions			−0.3		V_{MIN}

(1) All characteristics are measured with a capacitor across the input of 0.1 µF and a capacitor across the output of 10 µF. All characteristics except noise voltage and ripple rejection ratio are measured using pulse techniques (t_W≤10 ms, duty cycle≤5%). Output voltage changes due to changes in internal temperature must be taken into account separately.
(2) To ensure constant junction temperature, low duty cycle pulse testing is used.
(3) Ensured and 100% production tested.
(4) Ensured (but not 100% production tested) over the operating temperature and input current ranges. These limits are not used to calculate outgoing quality levels.

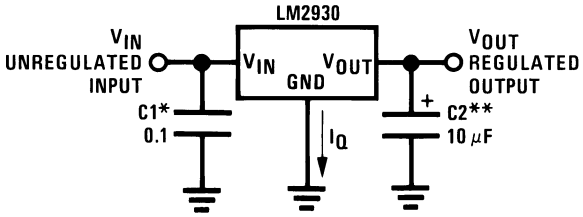
Electrical Characteristics (1)

LM2930-8.0 (V_{IN}=14V, I_O=150 mA, T_j=25°C (2), C2=10 µF, unless otherwise specified)

Parameter	Conditions	Typ	Tested Limit (3)	Design Limit (4)	Unit
Output Voltage		8	8.5		V_{MAX}
			7.5		V_{MIN}
	9.4V≤V_{IN}≤26V, 5 mA≤I_O≤150 mA, −40°C≤T_J≤125°C			8.8	V_{MAX}
				7.2	V_{MIN}
Line Regulation	9.4V≤V_{IN}≤16V, I_O=5 mA	12	50		mV_{MAX}
	9.4V≤V_{IN}≤26V, I_O=5 mA	50	100		mV_{MAX}
Load Regulation	5 mA≤I_O≤150 mA	25	50		mV_{MAX}
Output Impedance	100 mA_{DC} & 10 mA_{rms}, 100 Hz−10 kHz	300			mΩ
Quiescent Current	I_O=10 mA	4	7		mA_{MAX}
	I_O=150 mA	18	40		mA_{MAX}
Output Noise Voltage	10 Hz−100 kHz	170			$µV_{rms}$
Long Term Stability		30			mV/1000 hr
Ripple Rejection	f_O=120 Hz	52			dB
Current Limit		400	700		mA_{MAX}
			150		mA_{MIN}
Dropout Voltage	I_O=150 mA	0.32	0.6		V_{MAX}
Output Voltage Under	−12V≤V_{IN}≤40V, R_L=100Ω		8.8		V_{MAX}
Transient Conditions			−0.3		V_{MIN}

(1) All characteristics are measured with a capacitor across the input of 0.1 µF and a capacitor across the output of 10 µF. All characteristics except noise voltage and ripple rejection ratio are measured using pulse techniques (t_W≤10 ms, duty cycle≤5%). Output voltage changes due to changes in internal temperature must be taken into account separately.
(2) To ensure constant junction temperature, low duty cycle pulse testing is used.
(3) Ensured and 100% production tested.
(4) Ensured (but not 100% production tested) over the operating temperature and input current ranges. These limits are not used to calculate outgoing quality levels.

Typical Application



*Required if regulator is located far from power supply filter.
**C_{OUT} must be at least 10 µF to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator. The equivalent series resistance (ESR) of this capacitor should be less than 1Ω over the expected operating temperature range.

Definition of Terms

Dropout Voltage: The input-output voltage differential at which the circuit ceases to regulate against further reduction in input voltage. Measured when the output voltage has dropped 100 mV from the nominal value obtained at 14V input, dropout voltage is dependent upon load current and junction temperature.

Input Voltage: The DC voltage applied to the input terminals with respect to ground.

Input-Output Differential: The voltage difference between the unregulated input voltage and the regulated output voltage for which the regulator will operate.

Line Regulation: The change in output voltage for a change in the input voltage. The measurement is made under conditions of low dissipation or by using pulse techniques such that the average chip temperature is not significantly affected.

Load Regulation: The change in output voltage for a change in load current at constant chip temperature.

Long Term Stability: Output voltage stability under accelerated life-test conditions after 1000 hours with maximum rated voltage and junction temperature.

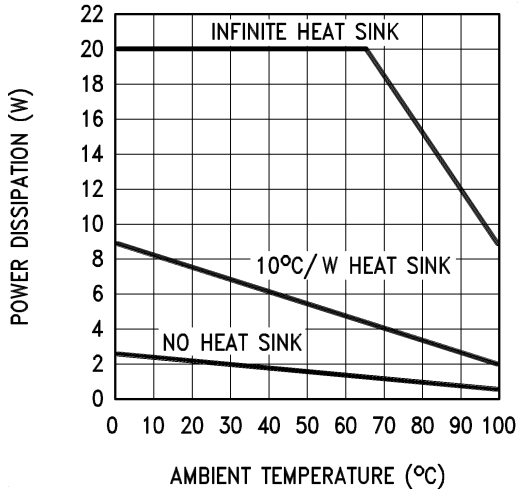
Output Noise Voltage: The rms AC voltage at the output, with constant load and no input ripple, measured over a specified frequency range.

Quiescent Current: That part of the positive input current that does not contribute to the positive load current. The regulator ground lead current.

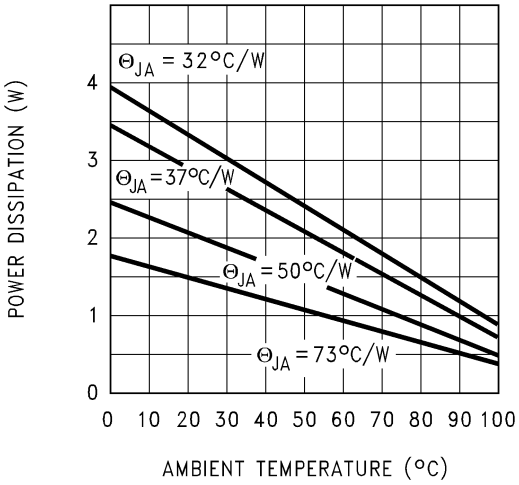
Ripple Rejection: The ratio of the peak-to-peak input ripple voltage to the peak-to-peak output ripple voltage.

Temperature Stability of V_O: The percentage change in output voltage for a thermal variation from room temperature to either temperature extreme.

Maximum Power Dissipation (TO-220)



Maximum Power Dissipation (SFM) (1)



(1) Thermal resistance without a heat sink for junction to case temperature is 3°C/W and for case to ambient temperature is 50°C/W for the TO-220, 73°C/W for the SFM. If the SFM package is used, the thermal resistance can be reduced by increasing the P.C. board copper area thermally connected to the package. Using 0.5 square inches of copper area, θ_{JA} is 50°C/W; with 1 square inch of copper area, θ_{JA} is 37°C/W; and with 1.6 or more square inches of copper area, θ_{JA} is 32°C/W.

- Changed layout of National Data Sheet to TI format 8

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package | Pins	Package qty | Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
LM2930T-5.0/NOPB	Active	Production	TO-220 (NDE) | 3	45 | TUBE	Yes	SN	Level-1-NA-UNLIM	-40 to 85	LM2930T -5.0 P+

(1) Status: For more details on status, see our product life cycle.

(2) Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
