Overview

NXP's demo boards for connected tags are an all-in-one demonstration/development resource for connected tags. Designed to emulate using an connected tag chip in an embedded electronic system, the kit centers around a multi-purpose microprocessor-based development/demo board, and includes a full complement of hardware and software tools to support investigation of the chip operation, the RF communication link, and the I²C serial bus connected link; perform a variety of demonstrations; and develop/test your own applications.

For each and every NXP connected tag there is a specific demo board available to show the unique features of each product.
