Static Characteristics

Standard Application

※ Operation without dimming:

IO operates at rated current without dimming function when the pins of analog DIM and PWM DIM keep open

※ PWM Dimming Control (non DA type):

IO adjustment by PWM Signal

During PWM dimming operation, IO will change with the PWM duty (PWM Signal: 1K~10KHz)

Note: DALI dimming curve refer to 10KHz curve

※ Analog Dimming Control (non DA type):

IO adjustment by DC voltage

During analog dimming operation, IO will change with DC input voltage

※ DALI Dimming Control (DA type only):

IO adjustment by DALI signal

- DALI protocol including 16 groups and 64 addresses.
- Min. dimming level is about 8% of output.

■ Efficiency VS Output Voltage(Number of LEDs)

Application Notes:

1. The positive and negative input terminals must be connected correctly and negative voltage can not be input to avoid damage to the power supply.
2. Due to the large input current, please pay attention to the voltage drop of the wiring, to ensure the power supply to work properly.
3. At dim off, LDH output voltage will drop to the same level as input voltage. To get luminaires complete dark, please make luminaires are light off when they are driving by the input voltage.
