Freescale Tower System

The TWR-LCDC-EPSON module is part of the Freescale Tower System portfolio, a modular development platform that enables rapid prototyping and tool re-use through reconfigurable hardware. Elevate your design to the next level with this industrial power house by building your Tower System today.

TWR-LCDC-EPSON Features

- Features the Epson S1D13513 display controller

- Onboard SDRAM

- Interfaces with a Tower System controller module via the parallel external memory interface (EBI)

- Interfaces directly with the TWR-LCD-RGB

- Optional interfaces for externally connected RGB or LVDS display panels

- Selectable SPI and I²C pass-through interfaces for LCD/touch configurations

Step-by-Step Installation Instructions

1 Assemble the Tower System

The default example application assumes the following Tower assembly: TWR-ELEV + TWR-K60D100M + TWR-LCD-RGB + TWR-LCDC-EPSON

Ensure that the Tower System modules are properly aligned to the primary and secondary edges, with the TWR-LCD-RGB attached to the secondary side.

2 Program the Tower System Controller

Using an IDE compatible with the TWR-K60D100M, such as CodeWarrior, follow the respective flashing instruction included with the default example application.

3 Interact with the Graphical User Interface

The default example application features a simple GUI developed using PEG and featuring the CRTouch to provide touch inputs.
