Description

The OPB900L and OPB910L series of Photologic® Photo Integrated Circuit Switches provide optimum flexibility for the design engineer. Building from a standard housing with a 0.375" (9.53 mm) wide slot, the user can specify (1) type and polarity of TTL output and (2) discrete shell material. Available with wire leads as OPB900W/OPB910W series.

The electrical output can be specified as either TTL totem pole or TTL open collector. Either may be supplied with inverter or buffer output polarity. All have added stability of a built-in hysteresis amplifier.

(5) The OPB900L/OPB910L series are terminated with 0.020" square leads designed for printed circuit board mounting.
(6) Normal application would be with light source blocked, simulated by I_F = 0 mA.
(7) All parameters tested using pulse technique.
(8) Methanol or isopropanol are recommended as cleaning agents. Plastic housings are soluble in chlorinated hydrocabons and ketones.

Housing

All housings are an opaque grade of injection-molded plastic to minimize the assembly's sensitivity to ambient radiation, both visible and near-infrared. Discrete shells (exposed on the parallel faces inside the device throat) are either IR transmissive plastic for applications where aperture contamination may occur or opaque plastic for maximum protection against ambient light.
